IMPORTANT

Get warranty and other information online – you can review and print or download a copy of documents for your vehicle provided by FCA US LLC by visiting these links. For the Owner's Manual and the Information and Entertainment System Manual, visit www.alfaromeousa.com/owners/owners-service-manual (U.S.) or www.alfaromeo.ca (Canada), and for the limited warranties, visit www.alfaromeousa.com/owners/warranty (U.S.) or www.alfaromeo.ca (Canada). Click on the applicable link and follow the instructions to select the applicable year, make and model for your vehicle.

This User Guide is intended to familiarize you with the important features of your vehicle. Your Owner's Manual, Radio Manual and Warranty Booklet can be found by visiting the website on the back cover of your User Guide. We hope you find these resources useful.

U.S. residents can purchase replacement kits by visiting www.alfaromeousa.com/owners/owners-service-manual and Canadian residents can purchase replacement kits by calling 800-387-1143.

If you have any questions about your vehicle or need assistance, please call Alfa Romeo Customer Care at 844-253-2872 (U.S.) or 1-877-230-0563 (Canada - English) or 1-877-515-9112 (Canada - French).

WARNING: Operating, servicing and maintaining a passenger vehicle or off-road highway motor vehicle can expose you to chemicals including engine exhaust, carbon monoxide, phthalates, and lead, which are known to the State of California to cause cancer and birth defects or other reproductive harm. To minimize exposure, avoid breathing exhaust, do not idle the engine except as necessary, service your vehicle in a well-ventilated area and wear gloves or wash your hands frequently when servicing your vehicle. For more information go to www.P65Warnings.ca.gov/passenger-vehicle.

If you are the first registered retail owner of your vehicle, you may obtain a complimentary printed copy of the Warranty Booklet by calling 800-253-2872 (U.S.) or 800-387-1143 (Canada) or by contacting your dealer.
Dear Customer,

We would like to congratulate and thank you for choosing Alfa Romeo.

We have written this User Guide to help you get to know all the features of your vehicle and use it in the best possible way.

Here you will find information, advice, and important warnings regarding vehicle use, and how to achieve the best performance from the technical features of your Alfa Romeo. Please take your time in reading this guide, and familiarize yourself with all the dynamic features of your vehicle.

You are advised to read through the User Guide before taking it on the road for the first time. It is important to become comfortable with the controls of your vehicle, especially with sections concerning the brakes, handling, transmission, and vehicle behavior on different road surfaces.

Additionally, this User Guide provides a description of special features and tips, as well as essential information for the safe driving, care, and maintenance of your Alfa Romeo over time.

In the provided Warranty Booklet, you will also find the description of the Services that Alfa Romeo offers to its customers. The New Vehicle Limited Warranty will detail the terms and conditions for maintaining its validity.

After reading through the User Guide, you are advised to keep the User Guide inside the vehicle as an easy reference, and to make sure it remains on board should the vehicle be sold.

We are sure that these will help you to appreciate and get in touch with your new vehicle, as well as the service provided by the people at Alfa Romeo.

NOTE:
This User Guide describes all vehicle models. Optional contents or equipment meant for specific Markets or particular versions are not identified as such in the text: you need to consider only the information related to the version you own. Any content introduced throughout the production of the model, outside the specific request of options at the time of purchase, will be identified with the wording (if equipped). All data contained in this User Guide is intended to help you use your vehicle in the best possible way. FCA US LLC aims at a constant improvement of the vehicles produced. For this reason, it reserves the right to make changes to the model described for technical and/or commercial reasons. For further information, contact an authorized dealer.

For questions or comments pertaining to your vehicle, please contact:
Alfa Romeo Customer Care Center:
P.O. Box 21–8004 Auburn Hills, MI 48321–8004 Phone: 1-844-Alfa-USA (1-844-253-2872)

Alfa Romeo Customer Care (Canada):

Phone: 1-877-515-9112 (French)

HOW TO FIND YOUR OWNER’S MANUAL ONLINE

This publication has been prepared as a reference item to help you quickly become acquainted with the most important features and processes of your vehicle. It contains most things you will need to operate and maintain the vehicle, including emergency information and procedures.

This User Guide is not a replacement for the full Owner’s Manual, and does not fully cover every operation and procedure possible with your vehicle.

For more detailed descriptions of the topics discussed in this User Guide, as well as information covering features and processes not covered in this User Guide, the full vehicle Owner’s Manual can be accessed for free online in a printer-friendly PDF format.

To get the full Owner’s Manual or applicable supplement for your vehicle, follow the appropriate web address below:
www.alfaromeousa.com/owners/owners-service-manual (U.S. Residents)
www.alfaromeo.ca (Canadian Residents)

FCA US LLC is committed to protecting our environment and natural resources. By converting from paper to electronic delivery for the majority of the user information for your vehicle, together we greatly reduce the demand for tree-based products and lessen the stress on our environment.
REFUELING
Do not use fuel containing methanol or ethanol E85. Using these mixtures may cause misfiring and driving issues, as well as damage vital components of the supply system.
For further details on the use of the correct fuel, see the “Fuel Requirements” paragraph in the “Technical Specifications” chapter.

STARTING THE ENGINE
Make sure that the electric park brake is engaged and that the transmission is in PARK (P) or NEUTRAL (N). Next, press the brake pedal, and then push the engine START/STOP button.

PARKING ON FLAMMABLE MATERIAL
The catalytic converter develops high temperatures during operation. Do not park the vehicle on grass, dry leaves, pine needles or other flammable material: fire hazard.

RESPECTING THE ENVIRONMENT
The vehicle is fitted with a system that carries out a continuous diagnosis of the emission-related components in order to help protect the environment.

ELECTRICAL ACCESSORIES
If you decide to add electrical accessories after purchasing the vehicle, (with the risk of gradually draining the battery), contact an authorized dealer. They can calculate the overall electrical requirement and check that the vehicle’s electric system can support the required load.

SCHEDULED SERVICING
Correctly performed maintenance procedures are essential for ensuring that your vehicle continuously maintains its quality in performance and safety features, environmental friendliness, and low running costs.
HOW TO USE THIS MANUAL

OPERATING INSTRUCTIONS

Each time an instruction is given that concerns direction (left/right or forward/ backward), it is written to be read from the perspective of an occupant in the driver’s seat. If a direction is written from a different perspective, it will be specified as such in the text as appropriate.

The figures in the manual are only examples: this might imply that some details of the image do not correspond to the actual arrangement of your vehicle.

To identify the chapter with the information necessary, you can consult the index at the end of this manual.

Chapters can be rapidly identified with dedicated graphic tabs, located at the side of each odd page. There is also a key for getting to know the chapter order and the relevant symbols in the tabs. Additionally, there is a textual indication of each current chapter at the side of each even page.

WARNINGS AND CAUTIONS

While reading this User Guide you will find a series of WARNINGS that must be carefully followed to prevent incorrect use of the components of the vehicle, which could cause accidents or injuries.

There are also CAUTIONS to prevent procedures that could damage your vehicle.

Therefore all WARNINGS and CAUTIONS must always be carefully followed.

WARNINGS and CAUTIONS are recalled in the text with the following symbols:

Personal Safety: 🔄

Vehicle Safety: 🚸

NOTE:

This User Guide describes all vehicle models. Optional contents, equipment meant for specific Markets or particular models are not identified as such in the text: you need to consider only the information related to the model you own. Any content introduced throughout the production of the model, outside the specific request of options at the time of purchase, will be identified by the indicator: — if equipped.

The data contained in this publication is intended to help you use your vehicle in the best possible way. FCA US LLC aims for constant improvement of the vehicles produced. For this reason, it reserves the right to make changes to the model described for technical and/or commercial reasons.

For further information, contact your authorized dealer.
SYMBOLS

Some car components have colored labels with symbols indicating precautions to be observed when using this component. It is important to follow all warnings when operating your vehicle. See below for a brief description of each symbol.

VEHICLE CHANGES / ALTERATIONS

NOTE:

- Any change or alteration of the vehicle might seriously affect its safety and road holding, which could cause accidents resulting in fatal injury.
- The use of these devices inside the passenger compartment (without an external antenna) may cause the electrical systems to malfunction. This could compromise the safety of the vehicle, in addition to constituting a potential hazard for passengers’ health.
- If mobile phones/laptops/smartphones/tablets are inside the car and/or close to the electronic key, a reduced performance of the Passive Entry/Keyless Start system may occur.

In this section, you will find important information to help you become familiar with the features needed to operate your vehicle, and how they function.

KEYS

Key Fob

Your vehicle uses a keyless ignition system. This system includes a key fob and a keyless push button ignition.

The Remote Keyless Entry key fob allows you to lock or unlock the doors and trunk or activate the Panic Alarm from distances. The key fob does not need to be pointed at the vehicle to activate the system.

PANIC Function

The key fob contains a PANIC button. Should you ever feel threatened, push this button and the vehicle security alarm will sound.

To activate the PANIC function, push and hold the PANIC button for at least one second. When the panic alarm is active, the headlights turn on, the turn signals flash, the horn honks intermittently, and all interior adjustable lights turn on. The panic alarm will remain active for three minutes, and can be deactivated:

- By pushing the PANIC button again.
- Automatically if the vehicle speed exceeds 5 mph (8 km/h).

In both cases, the panic alarm is immediately deactivated.

**WARNING!**

- Before exiting a vehicle, always shift the automatic transmission into PARK, apply the parking brake, turn the engine OFF, remove the key fob from the vehicle and lock your vehicle.
- Never leave children alone in a vehicle, or with access to an unlocked vehicle.
- Allowing children to be in a vehicle unattended is dangerous for a number of reasons. A child or others could be seriously or fatally injured. Children should be warned not to touch the parking brake, brake pedal or the gear selector.

Operation

Door And Trunk Lid Unlock

Briefly pushing the unlock button on the key fob will unlock the doors and trunk lid, turn on the interior lights, and flash the turn signals once (if activated from the Information and Entertainment System).

Push and release the unlock button on the key fob once to unlock the driver side front door or twice within one second to unlock all doors and the trunk lid.

The current unlock setting can be changed through the Information and Entertainment System menu, so that the system unlocks:

- All doors unlock on the first push of the key fob unlock button.
- Unlock the driver door on the first push of the key fob unlock button.
GETTING TO KNOW YOUR VEHICLE

Flashing of the turn signals upon locking/unlocking the doors and activation of the courtesy light upon unlocking the doors can be activated or deactivated through the Information and Entertainment System. For further information, refer to the Information and Entertainment System Owner’s Manual Supplement.

The doors can also be unlocked by using the emergency key, located inside the key fob.

**Door And Trunk Lid Lock**

Briefly pushing the lock button on the key fob will lock the doors and trunk lid, turn off the interior lights, and flash the turn signals (if activated in the Information and Entertainment System).

If one or more doors are open, these doors will also lock, and this is indicated by a rapid flashing of the turn signals. The doors prepare for locking, which becomes active from the moment they are closed. The doors will unlock again only if the key fob is detected inside the passenger compartment.

The doors can be locked by using the emergency key in the driver’s side door lock.

**Trunk Lid Opening**

Rapidly push the trunk lid key fob button twice to open the trunk lid. The turn signals will flash to indicate that the trunk lid has been opened.

**Remote Start**

The remote start button on the key fob enables engine starting (push the button twice within five seconds to start the engine).

**Car Finder**

Push the lock or unlock button to remotely and temporarily turn on the turn signals and headlights.

This is useful for finding the vehicle easily in a crowded area like a parking garage, for example.

Pushing the lock or unlock button again will restart the lights turn on timer (if the parking lights functions were already active, it will remain active).

This function is available only if the doors are closed.

**General Information**

The following regulatory statement applies to all radio frequency (RF) devices equipped in this vehicle:

This device complies with Part 15 of the FCC Rules and with Industry Canada license-exempt RSS standard(s). Operation is subject to the following two conditions:

1. This device may not cause harmful interference, and
2. This device must accept any interference received, including interference that may cause undesired operation.

**NOTE:**

Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

**IGNITION SYSTEM**

**Operation**

To activate the keyless ignition, the key fob must be inside the passenger compartment.
The keyless ignition has the following modes:

- **STOP**: engine off, steering locked. Some electrical devices (e.g. central door locking system, alarm, etc.) are still available.

- **ON**: all electrical devices are available. This state can be entered by pushing the ignition button once, without pressing the brake pedal.

- **AVV**: engine starting. This state can be entered by pushing the ignition button once while pressing the brake pedal.

**NOTE:**

- With the keyless ignition in the ON position: if 30 minutes pass with the gear selector in P (Park) and the engine stopped, the keyless ignition will automatically reset to the STOP position.

- With the engine started, it is possible to remove the key fob from the vehicle. The engine will remain running and the instrument cluster will indicate the absence of the key fob when the door is closed.

For more information on the engine start-up, refer to "Starting The Engine" in "Starting And Operating."

---

### WARNING!

- Never use the PARK position as a substitute for the parking brake. Always apply the parking brake fully when parked to guard against vehicle movement and possible injury or damage.

- When exiting the vehicle, always make sure the ignition is in the OFF mode, remove the key fob from the vehicle, and lock your vehicle.

- Never leave children alone in a vehicle, or with access to an unlocked vehicle. Allowing children to be in a vehicle unattended is dangerous for a number of reasons. A child or others could be seriously or fatally injured. Children should be warned not to touch the parking brake, brake pedal or the transmission gear selector.

- Do not leave the key fob in or near the vehicle, (or in a location accessible to children), and do not leave the ignition in the AVV or ON/RUN mode. A child could operate power windows, other controls, or move the vehicle.

- Be sure the parking brake is fully disengaged before driving; failure to do so can lead to brake failure and a collision.

---

### WARNING! (Continued)

- Always fully apply the parking brake when leaving your vehicle, or it may roll and cause damage or injury. Also be certain to leave the transmission in PARK. Failure to do so may allow the vehicle to roll and cause damage or injury.

- Driving the vehicle with the parking brake engaged, or repeated use of the parking brake to slow the vehicle may cause serious damage to the brake system.

---

### CAUTION!

If the Brake System Warning Light remains on with the parking brake released, a brake system malfunction is indicated. Have the brake system serviced by an authorized dealer immediately.

### Starting With A Discharged Key Fob Battery

If the key fob battery is discharged, proceed as follows to start the vehicle:

1. Lift the front armrest.
2. Lay the key fob on the key fob outline found on the floor of the armrest compartment while pushing the START/STOP button to start the ignition.

**NOTE:** Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

**ENGINE IMMOBILIZER**

**Engine Immobilizer Operation**

The Engine Immobilizer system prevents unauthorized use of the vehicle by disabling engine starting.

The system does not need to be enabled or activated. Operation of the immobilizer is automatic whether the vehicle's doors are locked or unlocked.

When the ignition is set to ON, the Engine Immobilizer system identifies the code transmitted by the key. If the code is recognized as valid, the Engine Immobilizer system enables engine starting.

When the ignition is brought back to STOP, the Engine Immobilizer system deactivates the control unit controlling the engine, disabling engine starting.

For the correct engine starting procedures, refer to “Starting The Engine” in “Starting And Operating.”

**Irregular Operation**

If the key code is not recognized during starting, the Engine Immobilizer Failure / Break-in Attempt icon is displayed on the instrument panel (refer to “Warning Lights And Messages” in “Getting To Know Your Instrument Panel”). This condition leads to the engine turning off after two seconds. In this case, switch the ignition to STOP and then to ON; if it is still blocked, try with the other keys provided. If it is still not possible to start the engine, contact an authorized dealer.

If the Engine Immobilizer Failure/Break-in Attempt icon is displayed while driving, this means that the system is running a self-diagnosis (e.g. due to a voltage drop). If the display persists, contact an authorized dealer.

**DOORS**

**Locking And Unlocking Doors From The Inside**

If all doors are closed properly, they will automatically lock once the vehicle has exceeded approximately 12 mph (20 km/h) (“Auto Relock” function active).

Push the interior lock button on the driver or passenger side door panel trim to lock the doors.

With doors locked, push the unlock button on the interior trim panel to unlock the doors.
NOTE:
The key fob may not be found if it is located next to a mobile phone, lap top or other electronic device; these devices may block the key fob’s wireless signal.

Door Lock And Unlock Switch Panel

WARNING!

- Do not leave children or animals inside parked vehicles in hot weather. Interior heat build-up may cause serious injury or death.
- For personal security and safety in the event of a collision, lock the vehicle doors as you drive as well as when you park and leave the vehicle.
- Before exiting a vehicle, always shift the automatic transmission into PARK, apply the parking brake, turn the engine OFF, remove the key fob from the vehicle and lock your vehicle.

WARNING! (Continued)

- Never leave children alone in a vehicle, or with access to an unlocked vehicle.
- Allowing children to be in a vehicle unattended is dangerous for a number of reasons. A child or others could be seriously or fatally injured. Children should be warned not to touch the parking brake, brake pedal or the gear selector.
- Do not leave the key fob in or near the vehicle, or in a location accessible to children. A child could operate power windows, other controls, or move the vehicle.

CAUTION!

An unlocked vehicle is an invitation. Always remove the key from the ignition and lock all of the doors when leaving the vehicle unattended.

Passive Entry

The Passive Entry system can identify the presence of a key fob near the doors and trunk lid.

The system enables the doors and trunk lid to be locked or unlocked without pushing any button on the key fob.

The key fob is detected only after the system recognizes the presence of a hand on one of the front door handles. If the detected key fob is valid, the doors and the trunk lid are unlocked (refer to the Information and Entertainment System Supplement for Passive Entry Settings).
NOTE:
The key fob may not be able to be detected by the vehicle keyless-go system if it is located next to a mobile phone, laptop or other electronic device; these devices may block the key fob’s wireless signal and prevent the keyless-go system from starting the vehicle.

Grasping the handle of the driver's door unlocks the driver's side door, or all doors depending on the mode set using the Information and Entertainment System (refer to the Information and Entertainment System Supplement for Passive Entry Settings).

**Door Locking**

To lock the doors, proceed as follows:

1. Make sure that you have the key fob and are close to the driver or passenger side door handle.

2. Push the Passive Entry door handle button or the Passive Entry trunk lid button, located next to the exterior trunk lid release button. This will lock all doors and the trunk lid. Door locking will activate the alarm as well.

**NOTE:**
After pushing the Passive Entry door handle button, you must wait two seconds before the doors can be unlocked again using the passive entry door handle button. This feature makes it possible to check whether the vehicle has been locked correctly by pulling the door handle within two seconds. The doors will not be unlocked again.

The vehicle doors and trunk lid can be locked by pushing the lock button on the key fob or on the interior door panel.

**Driver Side Door Emergency Opening**

If the key fob does not work, e.g. because its battery is discharged or the vehicle battery is discharged, the emergency key inside the key fob can be used to unlock the driver side door.

To remove the emergency key, proceed as follows:

1. Push the sides of the key fob inward and extract the cover pulling downwards.

2. Remove the emergency key from the key fob housing.
3. Insert the emergency key in the driver side door lock cylinder and turn it to the left (counter clockwise) to unlock the door.

Key Fob Cover Removal

Removing Emergency Key

Do not push the door lock/unlock button and pull the handle at the same time.

General Information

The following regulatory statement applies to all Radio Frequency (RF) devices equipped in this vehicle:

This device complies with Part 15 of the FCC Rules and with Industry Canada license-exempt RSS standard(s). Operation is subject to the following two conditions:

1. This device may not cause harmful interference, and
2. This device must accept any interference received, including interference that may cause undesired operation.

NOTE:
Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

Child Safety Locks

To provide a safer environment for small children riding in the rear seats, the rear doors are equipped with Child-Protection Door Lock system.

This device can be engaged only with the doors open.

Child Safety Lock Positions

- Lock position: device locked (door opened from exterior only)
- Unlock position: device unlocked (door may be opened from the inside)

The Child Safety Locks remain locked even if the doors are unlocked.

NOTE:
The rear doors cannot be opened from the inside when the Child Safety Lock is engaged.
Locking The Doors With A Discharged Battery

Proceed as follows to unlock the doors if the vehicle battery is discharged.

Rear Doors And Passenger Door

1. With the doors unlocked insert the emergency key from the key fob or a flat bladed screwdriver into the door lock manual release lock cylinder.

   ![Door Lock Manual Release Lock Cylinder](image)

2. Turn the manual release lock cylinder clockwise for the right door locks or counterclockwise for the left door locks.

3. Remove the key/screwdriver from the manual release lock.

Proceed in one of the following ways to realign the door lock device (only when the battery charge has been restored):

- Push the lock button on the electronic key
- Push the unlock button on the door panel
- Unlock driver’s door lock with the emergency key
- Operate the internal door handle

**NOTE:**
For the rear doors, if the Child Safety Locks are engaged, and the previously described locking procedure is carried out, operating the internal handle will not open the door. Instead, it will only realign the lock release device. To open the door, the outside handle must be used. The door central locking/unlocking buttons are not deactivated when the emergency lock is engaged.

SEATS

The front seats can be adjusted to ensure maximum comfort for the occupants. When adjusting the driver’s seat, keep the shoulders resting firmly against the backrest, and the wrists within reach of the top of the steering wheel. The driver must also be able to fully press the brake pedal.

**WARNING!**

- It is dangerous to ride in a cargo area, inside or outside of a vehicle. In a collision, people riding in these areas are more likely to be seriously injured or killed.
- Do not allow people to ride in any area of your vehicle that is not equipped with seats and seat belts. In a collision, people riding in these areas are more likely to be seriously injured or killed.
- Be sure everyone in your vehicle is in a seat and using a seat belt properly.

Sparco Racing Seats — If Equipped

**Forward/Rearward Adjustment**

The adjustment lever is at the front of the seat, near the floor. Pull the bar upward to move the seat forward or rearward. Release the bar once the seat is in the desired position. Using body pressure, move forward and rearward on the seat to be sure that the seat adjusters have latched.
Manual Seat Adjustment

1 — Adjustment Lever
2 — Height Adjustment Button
3 — Recline Lever

Height Adjustment
Push the height adjustment button upward or downward to obtain your desired height.

Seatback Recline
To adjust the seatback, lift the recline lever located on the outboard side of the seat, lean back to the desired position and release the lever. To return the seatback, lift the lever, lean forward and release the lever.

Power Seats

NOTE:
The conformation of the seats may vary according to the versions.

The power seat switches are located on the outboard side of the seat near the floor. Use these switches to move the driver's seat up, down, forward, rearward, or to recline the seatback.

Forward/Rearward Adjustment
Push the seat switch forward or rearward to adjust to your desired position.

Seatback Recline
The angle of the seatback can be adjusted forward or rearward. Push the seatback switch in the desired direction, and the seat will move in the direction of the switch. Release the switch when the desired position is reached.

Power Lumbar
The power lumbar switch is located on the outboard side of the power seat. Push the switch forward or rearward to increase or decrease the lumbar support. Push the switch upward or downward to raise or lower the lumbar support.

Height Adjustment
The height of the seats can be adjusted up or down. Pull upward or push downward on the seat switch, and the seat will move in the direction of the switch. Release the switch when the desired position is reached.

Seat Angle Adjustment ( Tilting ) — If Equipped
The seat angle can be adjusted in four directions. Lift or push the front part of seat switch to move the front part of the seat in the corresponding direction. Release the seat switch when the seat has reached the desired position.

CAUTION!
Do not place any article under a power seat or impede its ability to move as it may cause damage to the seat controls. Seat travel may become limited if movement is stopped by an obstruction in the seat’s path.
Power Bolster Adjustment — If Equipped
Push the power bolster adjustment buttons to regulate the width of the backrest through the lateral padding.

Seatback Width Adjustment
4 — Power Adjustable Bolster Buttons
5 — Driver Memory Seat Buttons

Seat Cushion Extension — If Equipped
Lift the adjustment lever and push the front of the cushion forward or rearward to extend the cushion by a few inches (centimeters).

WARNING!
- Adjusting a seat while driving may be dangerous. Moving a seat while driving could result in loss of control which could cause a collision and serious injury or death.
- Seats should be adjusted before fastening the seat belts and while the vehicle is parked. Serious injury or death could result from a poorly adjusted seat belt.
- Do not ride with the seatback reclined so that the shoulder belt is no longer resting against your chest. In a collision you could slide under the seat belt, which could result in serious injury or death.

Driver Memory Seat
Storing and recalling can be done with the ignition in the ON mode, vehicle speed at 0 mph (0 km/h), and the driver’s side door closed, or for three minutes after having opened the driver’s side door. An audible chime is heard to confirm a memory profile is set or recalled. To set a memory profile, first adjust your seat (and power mirror position if desired) until you are in the desired position. Then, push the memory button you want to assign the set position to for 1.5 seconds. When a new seat position is memorized, the previously memorized position on the same button is automatically overwritten. Recalling a memorized position can also be done for approximately three minutes after the doors are opened and for approximately one minute after the engine is stopped. To recall a memorized position, push the assigned button briefly.

Heated Seats — If Equipped
NOTE:
If your vehicle is equipped with Sparco Racing Seats, they will not be equipped with the heated seat feature.
With the engine in the ON position, push the driver or passenger heated seat button located on the instrument panel.

**Heated Seat Buttons**

You can select three heating levels:
- **Maximum** — three LED indicators illuminated on the buttons.
- **Average** — two LED indicators illuminated on the buttons.
- **Minimum** — one LED indicator illuminated on the buttons.

After selecting a heating level, heat will be felt within a few minutes.

A quick push of the heated seat button will select the heat levels in order of highest to lowest. A fourth push of the button will turn the heated seat off.

The “minimum” setting is automatically deactivated once a certain period of time has elapsed. This varies on a case-by-case basis, in accordance with the specific operating conditions.

**NOTE:**

The heated seat function can only be activated in temperatures below 39°F (4°C).

**Vehicles Equipped With Remote Start**

On models that are equipped with remote start, the front heated seats can be programmed to come on during remote start. The feature can be activated through the Information and Entertainment System. Refer to the Information and Entertainment System Owner’s Manual Supplement for further information.

**Rear Heated Seats**

If equipped with rear heated seats, the controls can be found on the rear of the center console and will function the same as the front heated seat controls.

**NOTE:**

To preserve the battery charge, this function cannot be activated when the engine is off.

**WARNING!**

- Persons who are unable to feel pain to the skin because of advanced age, chronic illness, diabetes, spinal cord injury, medication, alcohol use, exhaustion or other physical condition must exercise care when using the seat heater. It may cause burns even at low temperatures, especially if used for long periods of time.
- Do not place anything on the seat or seatback that insulates against heat, such as a blanket or cushion. This may cause the seat heater to overheat. Sitting in a seat that has been overheated could cause serious burns due to the increased surface temperature of the seat.

**Rear Seats**

The rear seats allow for three passengers.

**NOTE:**

The center seat in the Quadrifoglio models is designed as a 4+1 seat vehicle. The center seat is of limited use. It is recommended that this seat only be used by a person who can use the backrest as a substitute for the head restraint.
GETTING TO KNOW YOUR VEHICLE

Rear Seat

Split Folding Rear Seat

The rear seatbacks can be folded forward to provide an additional storage area.

Partial Extension Of The Luggage Compartment

Extending the right side of the trunk allows you to carry two passengers on the left part of the rear seat, while extending the left side allows you to carry one passenger.

Proceed as follows:

1. Completely lower the rear seat head restraints. Refer to "Head Restraints" in this chapter for further information.
2. Place the seatbelt so that it doesn't impede the movement of the backrest while tilting it.
3. From inside the luggage compartment, operate lever 1 to tilt the left part or lever 2 to tilt the right part of the backrest: it will automatically tilt forward. If necessary, assist the backrest during the initial stage of tilting.

Before tilting the backrest, make sure that the rear center seatbelt is not fastened and that there are not any objects in the middle part of the cushion.

Using the release strap, release the center part of the backrest from its housing and tilt it using the head restraint.

Center Backrest Section Tilting

Repositioning The Backrests

Move the seatbelts to the side, making sure that they are correctly extended and not twisted, and that they are not trapped behind the backrests of the seats. Make sure the seatbelts are in the front of the seatback and lift the backrests, pushing them back until you hear the locking click on both latch mechanisms.

Center Backrest Section Tilting

The center backrest can be tilted forward for a "Ski-Pass Through" feature from the trunk.

Easy Entry Function

The Easy Entry function is designed to retract the driver side seat automatically by

Center Backrest Section Repositioning

Using the head restraint, lift the center portion upwards, accompanying it during its movement, and lightly push to make sure that it is properly attached. Make sure that the armrest is properly attached by attempting to move it. If it is not attached, repeat the operation.

Seat Release Levers

1 — Left Side Seat Release Lever
2 — Right Side Seat Release Lever

Repositioning The Backrests

Move the seatbelts to the side, making sure that they are correctly extended and not twisted, and that they are not trapped behind the backrests of the seats. Make sure the seatbelts are in the front of the seatback and lift the backrests, pushing them back until you hear the locking click on both latch mechanisms.

Center Backrest Section Tilting

The center backrest can be tilted forward for a "Ski-Pass Through" feature from the trunk.

Easy Entry Function

The Easy Entry function is designed to retract the driver side seat automatically by
2.36 in (60 mm) to make it easier for the driver to get in and out of the car.

The movement is activated only if the seat is set to a driving position which is in front of the B pillar of the vehicle.

The function is associated with power front seats for each of the three stored positions.

The Easy Entry function can be activated/deactivated through the Information and Entertainment System.

HEAD RESTRAINTS

Head restraints are designed to reduce the risk of injury by restricting head movement in the event of a rear impact. Head restraints should be adjusted so that the top of the head restraint is located above the top of your ear.

**WARNING!**

- A loose head restraint thrown forward in a collision or hard stop could cause serious injury or death to occupants of the vehicle. Always securely stow removed head restraints in a location outside the occupant compartment.
- ALL the head restraints MUST be reinstalled in the vehicle to properly protect the occupants. Follow the re-installation instructions above prior to operating the vehicle or occupying a seat.

** WARNING! (Continued)**

- Do not place items over the top of the Reactive Head Restraint, such as coats, seat covers or portable DVD players. These items may interfere with the operation of the Reactive Head Restraint in the event of a collision and could result in serious injury or death.

**Sparco Racing Seat Head Restraints — If Equipped**

Your vehicle may be equipped with non-adjustable head restraints on the driver's and passenger's seatbacks.

The non-adjustable head restraints consist of a trimmed foam covering over the upper structure of the seatbacks and are intended to help protect you and the passenger from neck injury.

Adjust the seatbacks to their upright, on-road positions so that the head restraint is positioned as close as possible to the back of your head.

**Front Head Restraints (Adjustments) — If Equipped**

The front head restraints may be height-adjustable. To adjust them, operate as follows:

- Upward adjustment: Raise the head restraint until it clicks into place.
- Downward adjustment: Push the adjustment button and push downward on the head restraint to lower.

**WARNING!**

- All occupants, including the driver, should not operate a vehicle or sit in a vehicle's seat until the head restraints are placed in their proper positions in order to minimize the risk of neck injury in the event of a crash.
- Head restraints should never be adjusted while the vehicle is in motion. Driving a vehicle with the head restraints improperly adjusted or removed could cause serious injury or death in the event of a collision.

**NOTE:**

To allow maximum visibility for the driver, if the head restraints are not in use, lower the head restraint all the way.
GETTING TO KNOW YOUR VEHICLE

Rear Head Restraints (Adjustments)

WARNING!

☐ All occupants, including the driver, should not operate a vehicle or sit in a vehicle’s seat until the head restraints are placed in their proper positions in order to minimize the risk of neck injury in the event of a crash.

☐ Head restraints should never be adjusted while the vehicle is in motion. Driving a vehicle with the head restraints improperly adjusted or removed could cause serious injury or death in the event of a collision.

The height of the outboard head restraints can be adjusted. The head restraint of the center seat, if equipped, can only be removed. The height cannot be adjusted.

For upward adjustment, pull up on the head restraint until it clicks into place.

For downward adjustment, push in the adjustment button and lower the head restraint while holding the button to the desired height.

To reinstall the head restraints, proceed as follows:

1. Hold down both the adjustment button and release button while placing the head restraint post into the holes.

2. Then, reposition the head restraint to the appropriate height for the passengers.

WARNING!

☐ A loose head restraint thrown forward in a collision or hard stop could cause serious injury or death to occupants of the vehicle. Always securely stow removed head restraints in a location outside the occupant compartment.

☐ ALL the head restraints MUST be reinstalled in the vehicle to properly protect the occupants. Follow the re-installation instructions above prior to operating the vehicle or occupying a seat.
STEERING WHEEL

Adjustments

This feature allows you to tilt the steering column upward or downward. It also allows you to lengthen or shorten the steering column. The tilt/telescoping lever is located below the steering wheel at the end of the steering column.

To Adjust The Position:

1. Pull the Tilt/Telescoping Control Handle down to the open position.
2. Adjust the steering wheel to the desired position.
3. Lock the desired position by pushing the Tilt/Telescoping Control Handle to the closed position.

STEERING WHEEL Adjustment

1 — Tilt/Telescoping Control Handle
A — Open
B — Closed

WARNING!

Do not adjust the steering column while driving. Adjusting the steering column while driving or driving with the steering column unlocked, could cause the driver to lose control of the vehicle. Failure to follow this warning may result in serious injury or death.

To Adjust The Position:

1. Pull the Tilt/Telescoping Control Handle down to the open position.
2. Adjust the steering wheel to the desired position.
3. Lock the desired position by pushing the Tilt/Telescoping Control Handle to the closed position.

WARNING!

It is absolutely forbidden to carry out any after-market operation involving steering system or steering column modifications (e.g. installation of anti-theft device) that could adversely affect performance. Doing so could void the New Vehicle Limited Warrant, cause SERIOUS SAFETY PROBLEMS INCLUDING INJURY, and also result in the vehicle not meeting type-approval requirements.
Heated Steering Wheel — If Equipped

NOTE:
If your vehicle is equipped with Sparco Racing Seats, the Heated Steering Wheel feature will not be available.

While the engine is running, push the heated steering wheel button on the instrument panel.

Heated Steering Wheel Button

When the function is enabled, the indicator on the button will illuminate.

NOTE:
The heated steering wheel function can only be activated in temperatures below 39°F (4°C).

Vehicles Equipped With Remote Start

On models that are equipped with remote start, the heated steering wheel can be programmed to come on during remote start. The feature can be activated through the Information and Entertainment System. Refer to the Information and Entertainment System Owner’s Manual Supplement for further information.

WARNING!

☐ Persons who are unable to feel pain to the skin because of advanced age, chronic illness, diabetes, spinal cord injury, medication, alcohol use, exhaustion, or other physical conditions must exercise care when using the steering wheel heater. It may cause burns even at low temperatures, especially if used for long periods.

☐ Do not place anything on the steering wheel that insulates against heat, such as a blanket or steering wheel covers of any type and material. This may cause the steering wheel heater to overheat.

Electrochromic Mirror

This mirror automatically adjusts for headlight glare from vehicles behind you.

The electrochromic mirror has a power button to activate/deactivate the automatic dimming/anti-glaring function.

Electrochromic Mirror Power Button

When the vehicle is in REVERSE, the automatic dimming feature is deactivated.
Outside Power Mirrors

Power Adjustment

The power mirrors can be adjusted with the ignition ON.

Select the desired mirror using the power mirror control.

To adjust the selected mirror, push the knob in the direction desired.

NOTE:
Once adjustment is complete, rotate the knob to the neutral position to prevent accidental movements.

Power Folding

With the power mirror control knob in the neutral position, move it to the power folding position. Move the knob again to return the mirrors to the driving position.

If the power mirror control knob is moved again during door mirror folding (from closed to open position and vice versa), the movement direction is reversed.

Automatic Activation

Activating the central door locking system from outside the vehicle automatically folds the mirrors. The mirrors return to the driving position when the vehicle is then unlocked.

If the door mirrors were folded using the power mirror control knob, they can only be returned to the driving position by rotating the knob again.

Automatic Dimming Mirrors

Like the electrochromic mirror, an automatic dimming feature is also available on the outside rear view mirrors to prevent glare. The automatic dimming button is the same for all rear view mirrors.

WARNING!

Vehicles and other objects seen in an outside convex mirror will look smaller and farther away than they really are. Relying too much on side convex mirrors could cause you to collide with another vehicle or other object. Use your inside mirror when judging the size or distance of a vehicle seen in a side convex mirror.

EXTERIOR LIGHTS

Headlight Switch

The headlight switch is located to the left of the steering wheel on the instrument panel. This switch controls the operation of the headlights, parking lights, instrument panel lights, instrument panel light dimming, interior lights and rear fog lights.

In addition, there are buttons for parking sensors deactivation and stop/start. Refer to “Starting And Operating” for further information.
GETTING TO KNOW YOUR VEHICLE

Headlight Switch

1 — Parking Sensors Deactivation Button
2 — Parking Light, Daylight Running Lights, Headlight Switch
3 — Instrument Panel Dimmer
4 — Rear Fog Light Button
5 — Stop/Start Button

The exterior lights can be activated only when the ignition is in the ON position, except for the parking lights. Refer to "Parking Lights" in this section for more information.

The instrument panel and the various controls on the dashboard will be illuminated when the exterior lights are turned on.

Automatic Headlights

This system automatically turns the headlights on or off according to ambient light levels.

Function Activation

Rotate the light switch to the (auto) position.

NOTE:
The function can only operate with the ignition ON.

Function Deactivation

To deactivate the function, rotate the light switch to a position other than the (auto) position and hold for a few seconds.

Daytime Running Lights (DRL)

With the ignition cycled to ON, and the light switch turned to the (auto) position, if the dusk sensor detects sufficient external light, the Daytime Running Lights will turn on automatically while the other lights remain off.

If the turn signals are operated, the brightness of the corresponding Daytime Running Lights will be decreased as long as the turn signals are on.

The DRL can be activated/deactivated from the Information and Entertainment System, by selecting the following functions in sequence on the main MENU:
1. “Settings."
2. “Lights."

NOTE:
The Daytime Running Lights cannot be deactivated in Canadian markets.

Rear Fog Light

The rear fog light switch is integrated with the headlight switch.

Push the button to turn the rear fog lights on/off.

The rear fog lights turn on only when the headlights or parking lights are turned on. The lights can be turned off by pushing the button again or by turning the headlight switch to the O (off) position.

When the engine is stopped with the rear fog lights on, they will remain off the next time the engine is started.

Parking Lights

With the ignition in the STOP position, turn the headlight switch to the (left) position to turn the parking lights on. All of the parking lights will turn on for eight minutes, and opening the door activates an audible warning.

To leave only the lights on one side (right/left) illuminated, you must move the multifunction lever (located on the left side of the steering wheel) to the side that you want to remain on. With the parking lights on, the warning light on the instrument panel will illuminate.
NOTE:
Cycling the ignition to ON turns off the parking lights, which were only illuminated on one side.

Headlight Off Delay
The “Headlight Off Delay” function delays the turning off of the headlights after the vehicle’s engine has been turned off.

The function can be activated from the Information and Entertainment System by selecting the following functions in sequence on the main menu:

1. “Settings.”
2. “Lights.”
3. “Headlight Off Delay.”

The side lights and the headlights stay on for a time that can be set between 0, 30, 60, and 90 seconds.

Function Activation
With the headlights on, cycle the ignition to STOP, the timer will then start.

NOTE:
To activate this function, the headlights must be deactivated within two minutes after the ignition has been cycled to STOP.

Function Deactivation
This function is deactivated by turning on the headlights, the side lights, or by cycling the ignition to ON.

Adaptive Frontlight System (AFS Function) — If Equipped
This is a system combined with Xenon headlights (Bi-Xenon 35 W headlamp if equipped) which directs the headlights horizontally, and continuously and automatically adapts them to the driving conditions around bends or when cornering.

The system directs the headlights to light up the road in the best way, taking into account the speed of the vehicle and the bend or corner angle, as well as the speed of steering.

The adaptive lights are automatically activated when the vehicle is started.

High Beam Headlights
To activate the fixed high beam headlights, push the multifunction lever, located on the left side of the steering wheel, towards the instrument panel. The headlight switch must be turned to the AUTO or setting.

With high beam headlights on, the High Beam Indicator on the instrument panel will illuminate.

Multifunction Lever
The high beam headlights are turned off by pulling the stalk to its original position. The High Beam Indicator will turn off in the instrument panel when the headlights are turned off.

Flashing The Headlights
Pulling the multifunction lever toward the steering wheel will activate the high beam headlights manually. The lights will remain on as long as the lever is held. Once the lever is released, the lights will resume the previous position.

Automatic High Beam Headlights — If Equipped
The Automatic High Beam Headlights system provides increased forward lighting at night by automating high beam control through the use of a digital camera mounted on the windshield. This camera detects vehicle specific light, and automatically switches the headlights from high beams to...
low beams until the approaching vehicle is out of view.

This function is enabled with the Information and Entertainment System, and can only be activated with the light switch turned to the AUTO position.

The first time that the high beam headlights are activated, the Automatic High Beam Headlights system will activate as well, and the warning light or the symbol will illuminate in the instrument panel.

If the high beam headlights are on, the blue icon/warning light will illuminate in the instrument panel.

NOTE:

☐ If the system recognizes heavy traffic areas, the automatic functions remain disabled independently of the vehicle’s speed.

☐ The Automatic High Beam functionality may also be influenced by:
  ☐ Reflections on road signs
  ☐ Dim headlights from oncoming traffic
  ☐ Poor weather conditions
  ☐ Presence of dirt or other obstructions on the sensor
  ☐ Damage to the windshield

Turn Signals

To activate the turn signals function, move the multifunction lever, located on the left side of the steering wheel, up or down until it reaches the detent. Moving the lever upward flashes the right turn signal and moving the lever downward will flash the left turn signal.

The or turn signal will blink on the instrument panel.

The turn signals turn off automatically when the vehicle is brought back onto a straight course.

“Lane Change” Function

Tap the lever up or down once, without moving beyond the detent, and the turn signal (right or left) will flash five times. Then, the turn signal (right or left) will automatically turn off.

To turn off the flashing before the end of the cycle, move the lever in the opposite direction until the first click (about half way).

Static Bending Light Function (SBL) — If Equipped

The SBL function utilizes Light Emitting Diodes (LEDs) in order to better illuminate the street and increase the light angle while turning. This function is enabled by rotating the light switch to position or (AUTO). The SBL LEDs activate when the speed is below 25 mph (40 km/h) and the steering radius is below 0.3 miles (500 m).

This function can be activated/deactivated on the Information and Entertainment System by selecting the following functions in sequence on the main menu:

1. “Settings.”
2. “Lights.”
3. “Cornering Lights.”
WINDSHIELD WIPERS

Windshield Wiper/Washers

**Operation:** The switch on the wiper stalk can be set to the following positions:

- **Windshield Wiper Off.**
- **Low Sensitivity Rain Sensing.**
- **High Sensitivity Rain Sensing.**
  - Low Continuous Wiper Speed.
  - High Continuous Wiper Speed.

**Windshield Wiper Operation**

Rotating the switch to the position activates the first (low) level continuous speed of the windshield wipers in manual mode.

**Rain Sensors**

Rotating the switch to the position activates the first, less sensitive level of the Rain Sensing function.

Rotating the switch to the position activates the second, more sensitive level of the Rain Sensing function. Refer to "Rain Sensor" in this section for more information on how this system functions.

**Windshield Washer Operation**

Pull the stalk toward the steering wheel to operate the windshield washer.

Keep the stalk pulled to activate both the windshield washer jet and the windshield wiper with a single movement. The wipers and washers will continue to operate until you let go of the stalk.

The windshield wiper stops working three strokes after the stalk is released, followed by a final stroke six seconds later to complete the cycle.

**Mist**

Use this feature when weather conditions make occasional usage of the wipers necessary. Push the stalk upward to the MIST position and release for a single wiping cycle.

This function is useful to remove small deposits of dust from the windshield or morning dew.

**NOTE:**

This function does not activate the windshield washer. To spray windshield washer fluid onto the windshield, the washing function must be used.

**WARNING!**

Sudden loss of visibility through the windshield could lead to a collision. You might not see other vehicles or other obstacles. To avoid sudden icing of the windshield during freezing weather, warm the windshield with the defroster before and during windshield washer use.

**Rain Sensor**

The Rain Sensor feature senses moisture on the windshield and automatically activates the wipers for the driver. The feature is especially useful for road splash or over spray from the windshield washers of the vehicle ahead.

**Activation/Deactivation**

Rotating the wiper switch to position or activates the rain sensor.

The activation of the rain sensor system is done by tapping the wiper stalk upwards while the switch is in the or position.

To deactivate the system, use wiper switch or cycle the ignition to STOP.
For further information on climate control functions, refer to “Climate Controls” in “Getting To Know Your Vehicle” in your Owner’s Manual.
Air Distribution Selection

Push the Air Distribution Selection button on the faceplate to change the mode of air distribution.

Air flow to the windshield and demister window vents to demist/defrost them.

Air flow at the central and side dashboard vents to ventilate the chest and the face.

Air flow to the front and rear floor vents. This setting heats the passenger compartment the quickest.

Air flow distributed between the floor vents, windshield, and front side window defrosting/demisting vents. This distribution setting warms the passenger compartment while preventing the windows from fogging up.

In AUTO mode, the Climate Controls automatically manage the air distribution. When set manually, the respective symbols on the Information and Entertainment System indicate the air distribution setting.

POWER WINDOWS

Power Window Switches

The power window switches work with the ignition in the ON position and for three minutes after the ignition has been placed in the STOP position. When one of the front doors is opened, this operation is disabled.

Driver Side Front Door Controls

The switches are located on the door panel trim. All windows can be controlled from the driver side door panel.

Power Window Switches

Window Opening

Push the buttons to open the desired window.

Each button has two position steps. Push gently (first position step) for manual "burst" window travel, while pushing the same button harder (second position step) activates "continuous automatic" operation.

If the button is pushed again, the window will stop in the desired position.
Window Closing
Pull the window switch up to move the window upward. Hold the switch for at least half of a second and the window will go up automatically.

To stop the window during Auto-Up operation, push or pull the window switch again.

Passenger Side Front Door/Rear Door Controls
There are single window controls on the passenger and rear door trim panels which operate the door windows.

Auto-Up Feature With Anti-Pinch Protection
The vehicle may be equipped with an anti-pinch safety device for closing the windows.

If the safety system senses any obstacle while the window is closing, it will stop the window's movement and reverse it, depending on its position.

This device is also useful if the windows are activated accidentally by children inside the vehicle.

The anti-pinch safety function is activated both during the manual and the automatic operation of the window.

When the anti-pinch system is activated, the window closing is immediately interrupted. Then the window closing is automatically reversed and the window lowers by about eight inches (20 cm) in relation to the first stop position. The window cannot be operated during this time.

NOTE:
In the event of an error, or if the anti-pinch protection is activated three consecutive times, the automatic closing operation of the window will be deactivated. In order to restore the correct operation of the system, the window must be lowered.

Power Window System Initialization
If power supply is interrupted, the electric window automatic operation must be reinitialized.

To perform the initialization procedure, which must be done on each door with the doors closed, manually fully close the window to be initialized.

POWER SUNROOF — IF EQUIPPED

Power Sunroof
The power sunroof consists of two glass panels (the front one is power and the rear one fixed) and is fitted with a power sunshade in the front, as well as a manually operated sunshade in the rear.

Operation of the sunroof is only possible with the ignition cycled to the ON position. Refer to “Ignition” in this chapter for further information.

The sunroof has three preset positions:
- Fully closed.
- Comfort (intermediate opening).
- Fully open.

NOTE:
You cannot have the sunshade closed when the sunroof is open.

⚠️ WARNING!

- Never leave children unattended in a vehicle, or with access to an unlocked vehicle. Never leave the key fob in or near the vehicle, or in a location accessible to children. Do not leave the ignition of a vehicle equipped with keyless ignition in the ON mode. Occupants, particularly unattended children, can become entrapped by the power sunroof while operating the power sunroof switch. Such entrapment may result in serious injury or death.

- In a collision, there is a greater risk of being thrown from a vehicle with an open sunroof. You could also be seriously injured or killed. Always fasten your seat belt properly and make sure all passengers are also properly secured.

(Continued)
**Opening**

To open the sunroof’s front panel, push the open/close button toward the rear of the vehicle to open to the comfort position (half way). Pushing the button a second time will open to the fully open position.

The automatic motion can be interrupted in any position by pushing the open/close button again.

**Closing**

From the fully open position, push the open/close button toward the front of the vehicle. The roof will close completely.

The automatic motion can be interrupted in any position by pushing the open/close button again.

**Vent Opening**

To bring the roof into vent position, push and release the vent button.

This type of vent opening can be activated regardless of the position of the sunroof. When starting with the roof in the closed position, pushing the vent button automatically causes the sunroof to open to the vent position. If the roof is already open, the button must be held until the roof reaches the vent-opening position.

Pushing vent button again during automatic movement of the roof will stop it.

**Sun Shade Movement**

The front sunshade is power operated.

Push the Power Shade open/close button toward the rear of the vehicle to open the front sun shade to the three quarter open position. Pushing the button a second time will open the sunshade completely.

Push the Power Shade open/close button toward the front of the vehicle to close the sun shade.

The automatic motion can be interrupted in any position by pushing the Power Shade on/off button again.

To open the rear sunshade, pull sunshade manually toward the rear of the vehicle.

**Pinch Protect Feature**

The sunroof has an anti-pinch safety system capable of detecting the presence of an obstacle during the closing movement. If an obstacle is detected, the system intervenes and the movement of the sunroof is immediately reversed into opening.

**Initialization Procedure**

Automatic operation of the sunroof must be re-initialized in case of faulty sunroof operation. It may also be necessary to initialize the sunroof after the vehicle’s battery has been disconnected and then reconnected.

**WARNING! (Continued)**

Do not allow small children to operate the sunroof. Never allow your fingers, other body parts, or any object, to project through the sunroof opening. Injury may result.

Do not open the sun roof if a roof rack or crossbars are fitted. Do not open the sun roof if there is snow or ice on it: you may damage it.

CAUTION!

- Do not open the sun roof if a roof rack or crossbars are fitted. Do not open the sun roof if there is snow or ice on it: you may damage it.

- Do not allow small children to operate the sunroof. Never allow your fingers, other body parts, or any object, to project through the sunroof opening. Injury may result.

Sunroof And Power Shade Buttons

1 — Power Shade Open/Close
2 — Open/Close Button
3 — Vent Open/Close

**CAUTION!**

- Do not open the sun roof if a roof rack or crossbars are fitted. Do not open the sun roof if there is snow or ice on it: you may damage it.

- Do not allow small children to operate the sunroof. Never allow your fingers, other body parts, or any object, to project through the sunroof opening. Injury may result.

**WARNING!**

Do not open the sun roof if a roof rack or crossbars are fitted. Do not open the sun roof if there is snow or ice on it: you may damage it.

CAUTION!

- Do not allow small children to operate the sunroof. Never allow your fingers, other body parts, or any object, to project through the sunroof opening. Injury may result.

**WARNING! (Continued)**

- Do not open the sun roof if a roof rack or crossbars are fitted. Do not open the sun roof if there is snow or ice on it: you may damage it.

- Do not allow small children to operate the sunroof. Never allow your fingers, other body parts, or any object, to project through the sunroof opening. Injury may result.

**CAUTION!**

- Do not open the sun roof if a roof rack or crossbars are fitted. Do not open the sun roof if there is snow or ice on it: you may damage it.

- Do not allow small children to operate the sunroof. Never allow your fingers, other body parts, or any object, to project through the sunroof opening. Injury may result.

**WARNING!**

Do not open the sun roof if a roof rack or crossbars are fitted. Do not open the sun roof if there is snow or ice on it: you may damage it.

CAUTION!

- Do not allow small children to operate the sunroof. Never allow your fingers, other body parts, or any object, to project through the sunroof opening. Injury may result.

**WARNING! (Continued)**

- Do not open the sun roof if a roof rack or crossbars are fitted. Do not open the sun roof if there is snow or ice on it: you may damage it.

- Do not allow small children to operate the sunroof. Never allow your fingers, other body parts, or any object, to project through the sunroof opening. Injury may result.

**CAUTION!**

- Do not open the sun roof if a roof rack or crossbars are fitted. Do not open the sun roof if there is snow or ice on it: you may damage it.

- Do not allow small children to operate the sunroof. Never allow your fingers, other body parts, or any object, to project through the sunroof opening. Injury may result.
NOTE:
The anti-pinching device is deactivated during the re-initialization procedure.
Proceed as follows:
1. With the ignition in the ON position, make sure the sunroof glass is fully closed (sunshade open).
2. Open the driver’s side door, and place the ignition in the OFF position.
3. Within five seconds, place the ignition in the AVV or ON position.
4. Within 10 seconds, push and hold the sunroof close switch (forward). After 8 - 10 seconds of holding the switch, the re-initialization process will begin. Continue to hold the switch while the sunroof motor cycles, and the sunshade will fully close.
5. Once the sunroof glass and the power sunshade have stopped motion, release the sunroof close switch, then push and hold it again within five seconds. Continue to hold the switch while the sunshade fully opens, the sunroof glass fully opens, followed by the glass fully closing then the sunshade fully closing.
6. Release the switch once all of the operation stops. Re-initialization of the sunroof motors is now complete.

NOTE:
If the switch is released prior to full completion of the operations described, the entire re-initialization procedure must be repeated from step 1.
7. Confirm express operations for the sunroof glass and sunshade is functional for opening and closing operations.

HOOD
Opening
To open the hood, proceed as follows:
1. Pull the release lever located on the driver’s side kick panel.
2. Go to the outside of the vehicle and position yourself in front of the grille.
3. Lift the hood slightly.
4. Move the under-hood latch from right to left to release the hood.
5. Raise the hood completely. The operation is assisted by the addition of two gas props which hold it in the open position.

NOTE:
- Do not tamper with the props and assist the hood while lifting it.
- Use both hands to lift the hood. Before lifting, check that the windshield wiper arms are not raised from the windshield or in operation, that the vehicle is stationary and that the electric park brake is engaged.
Closing

To close, lower the hood to approximately 16 inches (40 cm) from the engine compartment then let it drop. Make sure that the hood is completely closed and fully latched. Do this by trying to open it. If it is not perfectly closed, do not try to push the hood lid down, but open it and repeat the procedure.

NOTE:

- **Quadrifoglio Models**: This hood is extremely light. When lowered to approximately 16 inches (40 cm), apply a slight pressure and drop the hood.

- Always check that the hood is closed correctly to prevent it from opening while the vehicle is travelling. Since the hood is equipped with a double locking system, one for each side, you must check that it is closed on each side.

**WARNING!**

Be sure the hood is fully latched before driving your vehicle. If the hood is not fully latched, it could open when the vehicle is in motion and block your vision. Failure to follow this warning could result in serious injury or death.

### TRUNK

The trunk unlocking is electrically operated and is deactivated when the vehicle is in motion.

#### Opening

**Opening From The Outside**

When unlocked, the trunk lid can be opened from outside the vehicle using the exterior trunk lid release button located between the plate lights. Push the button until you hear a “click.” The trunk lid can also be opened by quickly pushing the exterior trunk lid release button on the key fob twice.

**Opening From The Inside**

When unlocked, the trunk lid can be opened from inside the vehicle using the interior trunk lid release button, located under the dashboard near the engine hood opening lever. Push the trunk lid release button until you hear a “click.”

The turn signal indicators will blink and the interior lights will turn on when the trunk lid is opened. They turn off automatically when the trunk lid is closed.

The lights turn off automatically after a few minutes if the trunk lid is left open.

---

**Exterior Trunk Lid Release Button**

**Interior Trunk Lid Release Button**
Trunk Lid Emergency Opening

A lever can be found in the trunk lid over the lock to allow opening from the inside.

Emergency Release Button

Pull the lever in the direction indicated by the arrow to open the trunk lid. The lever can be seen in the dark.

Closing

Grip one of the handles and lower the trunk lid until it clicks.

Trunk Initialization

NOTE:
- It will not be possible to open the trunk lid with a key or by pushing the button in the passenger compartment when the battery is disconnected. So, always position the manual trunk lid opening strap on the trunk lid lock before disconnecting the battery. Refer to “Storing The Vehicle” in “Servicing And Maintenance” for the procedure.

GARAGE DOOR OPENER — IF EQUIPPED

HomeLink® replaces up to three hand-held transmitters that operate devices such as garage door openers, motorized gates, lighting or home security systems. The HomeLink® unit is powered by your vehicle’s 12 Volt battery.

The HomeLink® buttons, located on the sun visor or the overhead console, designate the three different HomeLink® channels. The HomeLink® indicator is located above the center button.

HomeLink® Buttons

1 — Homelink® Button 1
2 — Homelink® Button 2
3 — Homelink® Button 3
4 — Homelink® Indicator

NOTE:
- HomeLink® is disabled when the Vehicle Security Alarm is active.

Before You Begin Programming HomeLink®

Be sure that your vehicle is parked outside of the garage before you begin programming.

For more efficient programming and accurate transmission of the radio-frequency
signal it is recommended that a new battery be placed in the hand-held transmitter of the device that is being programmed to the HomeLink® system.

To erase the channels, place the ignition in the ON position, and push and hold the two outside HomeLink® buttons (I and III) for up to 20 seconds or until the orange indicator flashes.

**NOTE:**
- Erasing all channels should only be performed when programming HomeLink® for the first time. Do not erase channels when programming additional buttons.
- If you have any problems, or require assistance, please call toll-free 1-800-355-3515 or, on the Internet at HomeLink.com for information or assistance.

**Programming A Rolling Code**

Garage door openers that were manufactured after 1995 can be identified by the “LEARN” or “TRAIN” button located where the hanging antenna is attached to the garage door opener.

**NOTE:**
- It is NOT the button that is normally used to open and close the door. The name and color of the button may vary by manufacturer.

For programming these garage door openers, proceed as follows:

1. Place the ignition in the ON position.
2. Place the hand-held transmitter 1 to 3 inches (3 to 8 cm) away from the HomeLink® button you wish to program while keeping the HomeLink® indicator light in view.
3. Push and hold the HomeLink® button you want to program while you push and hold the hand-held transmitter button.
4. Continue to hold both buttons and observe the indicator light. The HomeLink® indicator will flash slowly and then rapidly after HomeLink® has received the frequency signal from the hand-held transmitter. Release both buttons after the indicator light changes from slow to rapid.
5. On the garage door opener (in the garage), locate the “LEARN” or “TRAINING” button. This can usually be found where the hanging antenna wire is attached to the garage door opener/device motor. Firmly push and release the “LEARN” or “TRAINING” button. On some garage door openers/devices there may be a light that blinks when the garage door opener/device is in the LEARN/TRAIN mode.

**NOTE:**
- You have 30 seconds in which to initiate the next step after the LEARN button has been pushed.
- 6. Return to the vehicle and push the programmed HomeLink® button twice (holding the button for two seconds each time). If the garage door opener/device activates, programming is complete.

To program the remaining two HomeLink® buttons, repeat each step for each remaining button. DO NOT erase the channels.

**NOTE:**
- If the garage door opener/device does not activate, push the button a third time (for two seconds) to complete the training.

**Reprogramming A Single HomeLink® Button (Rolling Code)**

To reprogram a channel that has been previously trained, follow these steps:

1. Place the ignition in the ON position.
2. Push and hold the desired HomeLink® button until the indicator light begins to flash after 20 seconds. Do not release the button.
3. Without releasing the button proceed with “Programming A Rolling Code” step 2 and follow all remaining steps.
**Programming A Non-Rolling Code**

For programming garage door openers manufactured before 1995:

1. Place the ignition in the ON position.
2. Place the hand-held transmitter 1 to 3 inches (3 to 8 cm) away from the HomeLink® button you wish to program while keeping the HomeLink® indicator light in view.
3. Press and hold the HomeLink® button you want to program while you press and hold the hand-held transmitter button.
4. Continue to hold both buttons and observe the indicator light. The HomeLink® indicator will flash slowly and then rapidly after HomeLink® has received the frequency signal from the hand-held transmitter. Release both buttons after the indicator light changes from slow to rapid.
5. Press and hold the programmed HomeLink® button and observe the indicator light.

- To program the two remaining HomeLink® buttons, repeat each step for each remaining button. DO NOT erase the channels.

**Reprogramming A Single HomeLink® Button (Non-Rolling Code)**

To reprogram a channel that has been previously trained, follow these steps:

1. Place the ignition in the ON position.
2. Press and hold the desired HomeLink® button until the indicator light begins to flash after 20 seconds. Do not release the button.
3. Without releasing the button, proceed with “Programming A Non-Rolling Code” step 2 and follow all remaining steps.

**Canadian/Gate Operator Programming**

The programming of transmitters in Canada/United States require the transmitter signals to time-out after several seconds of transmission.

Canadian radio frequency laws require transmitter signals to time-out (or quit) after several seconds of transmission – which may not be long enough for HomeLink® to pick up the signal during programming. Similar to this Canadian law, some U.S. gate operators are designed to time-out in the same manner.

It may be helpful to unplug the device during the cycling process to prevent possible overheating of the garage door or gate motor.

1. Place the ignition in the ON position.
2. Place the hand-held transmitter 1 to 3 inches (3 to 8 cm) away from the HomeLink® button you wish to program while keeping the HomeLink® indicator light in view.
3. Continue to press and hold the HomeLink® button, while you press and release (cycle) your hand-held transmitter every two seconds until HomeLink® has successfully accepted the frequency signal. The indicator light will flash slowly and then rapidly when fully trained.
4. Watch for the HomeLink® indicator to change flash rates. When it changes, it is programmed. It may take up to 30 seconds or longer in rare cases. The garage door may open and close while you are programming.
5. Press and hold the programmed HomeLink® button and observe the indicator light.
NOTE:

☐ If the indicator light stays on constantly, programming is complete and the garage door/device should activate when the HomeLink® button is pressed.

☐ To program the two remaining HomeLink® buttons, repeat each step for each remaining button. DO NOT erase the channels.

If you unplugged the garage door opener/device for programming, plug it back in at this time.

Reprogramming A Single HomeLink® Button (Canadian/Gate Operator)

To reprogram a channel that has been previously trained, follow these steps:

1. Place the ignition to the ON position.
2. Press and hold the desired HomeLink® button until the indicator light begins to flash after 20 seconds. Do not release the button.
3. Without releasing the button, proceed with “Canadian/Gate Operator Programming” step 2 and follow all remaining steps.

Using HomeLink®

To operate, push and release the programmed HomeLink® button. Activation will now occur for the programmed device (i.e. garage door opener, gate operator, security system, entry door lock, home/office lighting, etc.). The hand-held transmitter of the device may also be used at any time.

Security

It is advised to erase all channels before you sell or turn in your vehicle.

To do this, push and hold the two outside buttons for 20 seconds until the orange indicator flashes. Note that all channels will be erased. Individual channels cannot be erased.

The HomeLink® Universal Transceiver is disabled when the Vehicle Security Alarm is active.

NOTE:
The universal garage door opener only operates when the engine is running for security reasons associated with removable tops and doors.

Troubleshooting Tips

If you are having trouble programming HomeLink®, here are some of the most common solutions:

☐ Replace the battery in the garage door opener hand-held transmitter.

☐ Push the LEARN button on the garage door opener to complete the training for a Rolling Code.

☐ Did you unplug the device for programming and remember to plug it back in?

If you have any problems, or require assistance, please call toll-free 1-800-355-3515 or, on the Internet at HomeLink.com for information or assistance.

WARNING!

☐ Vehicle exhaust contains carbon monoxide, a dangerous gas. Do not run your vehicle in the garage while programming the transceiver. Exhaust gas can cause serious injury or death.

(Continued)
General Information

The following regulatory statement applies to all Radio Frequency (RF) devices equipped in this vehicle:

This device complies with Part 15 of the FCC Rules and with Innovation, Science and Economic Development Canada license-exempt RSS standard(s). Operation is subject to the following two conditions:

1. This device may not cause harmful interference, and
2. This device must accept any interference received, including interference that may cause undesired operation.

NOTE:
Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

INTERNAL EQUIPMENT

Glove Compartment

To open the glove compartment proceed as follows:

1. If equipped with a lock, unlock the glove compartment by placing the emergency key in the lock on the handle.
2. Pull handle to open the glove compartment.

When the glove compartment is opened, a light turns on to illuminate the inside of the compartment.

NOTE:
Do not insert large objects that will prevent the glove compartment from closing completely. Always make sure that the glove compartment is completely closed when driving.
ACTIVE AERODYNAMICS

Carbon Fiber Active Aero Front Spoiler
This is an automatic device, working at the vehicle speed, which allows higher reactivity at average speeds and higher vehicle stability at high speeds, regulating the air flow into the lower part of the vehicle.

NOTE:
The system is not active in temperatures near or below zero, or when the Alfa DNA / Pro selector is in the "Natural" or "Advanced Efficiency" positions.

If there is a fault, a generic failure icon will light up on the instrument panel display, along with a message that will identify the type of malfunction. See your authorized dealer if a fault occurs.
This section gives you all the information you need to understand and use the instrument panel correctly.

**INSTRUMENT PANEL FEATURES**

**Instrument Clusters**
1. Tachometer
2. Digital Engine Oil Temperature Gauge With Overheating Warning Light
3. Instrument Cluster Display
4. Digital Fuel Level Gauge (The Triangle On The Left Side Of The Symbol Indicates The Side Of The Vehicle With The Fuel Door)
5. Speedometer (Speed Indicator)
INSTRUMENT CLUSTER DISPLAY

Instrument Cluster Display Description

This vehicle is equipped with a driver-interactive display that is located in the instrument cluster.

When one or more of the doors have been opened or closed and the ignition is in the OFF position, the instrument cluster will display the vehicle mileage for a few seconds.

Reconfigurable Instrument Cluster Display

During operation, the instrument cluster display is divided into multiple sections which show driving data, warnings and failure indications.

1. Headlight Warning Lights
2. Gearbox Information
3. Front, Side Anti-Collision Systems, Cruise Control
4. Speed Limit Warning Light
5. Compass
6. Reconfigurable Main Area
7. Vehicle Range
8. Failure Warning Lights
9. Odometer

Refer to “Instrument Cluster Display” in “Getting To Know Your Instrument Panel” in the Owner’s Manual for further information.
WARNING LIGHTS AND MESSAGES ON THE INSTRUMENT PANEL

The following pages consist of warning lights and messages.

NOTE:

☐ The warning light turns on together with a dedicated message and/or chime when applicable. These indications are precautionary and as such must not be considered as exhaustive and/or alternative to the information contained in the Owner’s Manual, which you are advised to read carefully in all cases. Always refer to the information in this section in the event of a failure indication.

☐ The failure indicators appearing on the display are divided into two categories: very serious and less serious faults. Serious faults are indicated by a repeated and prolonged warning cycle. Less serious faults are indicated by a warning cycle with a shorter duration. You can stop the warning cycle in both cases by pushing the button located on the windshield wiper stalk. The instrument panel warning light will stay on until the cause of the failure is eliminated.

Red Warning Lights

<table>
<thead>
<tr>
<th>Warning Light</th>
<th>What It Means</th>
<th>What To Do</th>
</tr>
</thead>
<tbody>
<tr>
<td>INSUFFICIENT BRAKE FLUID/ELECTRIC PARK BRAKE ON</td>
<td>This light monitors various brake functions, including brake fluid level and parking brake application. If the brake light turns on it may indicate that the parking brake is applied, that the brake fluid level is low, or that there is a problem with the anti-lock brake system reservoir. If the light remains on when the parking brake has been disengaged, and the fluid level is at the full mark on the master cylinder reservoir, it indicates a possible brake hydraulic system malfunction or that a problem with the Brake Booster has been detected by the Anti-Lock Brake System (ABS) / Electronic Stability Control (ESC) system. In this case, the light will remain on until the condition has been corrected. If the problem is related to the Brake Booster, the ABS pump will run when applying the brake, and a brake pedal pulsation may be felt during each stop.</td>
<td>Operation of the Brake Warning Light can be checked by turning the ignition switch from the OFF position to the ON/RUN position. The light should illuminate for approximately four seconds. The light should then turn off unless the parking brake is applied or a brake fault is detected. If the light does not illuminate, have the light inspected by an authorized dealer. The light also will turn on when the parking brake is applied with the ignition switch in the ON/RUN position. This light shows only that the parking brake is applied. It does not show the degree of brake application. For low brake fluid level, go to an authorized dealer to have the system checked as soon as possible. Release the electric park brake, then check that the warning light has turned off. If the warning light stays on, contact an authorized dealer.</td>
</tr>
</tbody>
</table>
### GETTING TO KNOW YOUR INSTRUMENT PANEL

<table>
<thead>
<tr>
<th>Warning Light</th>
<th>What It Means</th>
<th>What To Do</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>BRAKE (ABS)</strong></td>
<td><strong>ELECTRONIC BRAKING FORCE DISTRIBUTION (EBD) FAILURE</strong>&lt;br&gt;The simultaneous turning on of the BRAKE (red) and (amber) warning lights with the engine on indicates either a failure of the EBD system or that the system is not available. In this case, the rear wheels may suddenly lock and the vehicle may swerve when braking abruptly.</td>
<td>Drive very carefully to the nearest authorized dealer to have the system inspected immediately.</td>
</tr>
<tr>
<td><strong>AIR BAG WARNING LIGHT</strong></td>
<td>This light will turn on for four to eight seconds as a bulb check when the ignition is placed in the ON/RUN position. If the light is either not on during startup, stays on, or turns on while driving, have the system inspected at an authorized dealer as soon as possible. This light will illuminate with a single chime when a fault with the Air Bag Warning Light has been detected, it will stay on until the fault is cleared. If the light comes on intermittently or remains on while driving, have an authorized dealer service the vehicle immediately.</td>
<td>If the problem persists, contact an authorized dealer.</td>
</tr>
<tr>
<td><strong>SEAT BELT REMINDER WARNING LIGHT</strong></td>
<td>When the ignition is first placed in the ON/RUN position, if the driver's seat belt is unbuckled, a chime will sound and the light will turn on. When driving, if the driver or front passenger seat belt remains unbuckled, the Seat Belt Reminder Light will flash or remain on continuously and a chime will sound. Refer to “Occupant Restraint Systems” in “Safety” for further information.</td>
<td>Always wear your seat belt when operating the vehicle.</td>
</tr>
<tr>
<td><strong>OIL TEMPERATURE WARNING LIGHT</strong></td>
<td>This telltale indicates engine oil temperature is high.</td>
<td>Stop the vehicle and shut off the engine as soon as possible. If the problem persists, contact an authorized dealer.</td>
</tr>
</tbody>
</table>
The fault of the warning light is signaled by the turning on of the icon on the instrument panel. In this case, the warning light may not indicate any faults with the restraint systems. Before proceeding, contact an authorized dealer to have the system checked immediately.

If the warning light does not turn on when the ignition device is moved to ON or if it stays on when driving (together with the message on the display), there might be a fault in the restraint systems; in this case, the air bags or pretensioners may not deploy in the event of an accident or, in a lower number of cases, they could deploy erroneously. Before proceeding, contact an authorized dealer to have the system checked immediately.
### Amber Warning Lights

<table>
<thead>
<tr>
<th>Warning Light</th>
<th>What It Means</th>
<th>What To Do</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>ANTI-LOCK BRAKE (ABS) INDICATOR LIGHT</strong></td>
<td>This light monitors the Anti-Lock Brake System (ABS). The light will turn on when the ignition is placed in the ON/RUN position and may stay on for as long as four seconds. If the ABS light remains on or turns on while driving, then the Anti-Lock portion of the brake system is not functioning and service is required. However, the conventional brake system will continue to operate normally if the brake indicator light is not on. If the ABS light is on, the brake system should be serviced as soon as possible to restore the benefits of Anti-Lock Brakes. If the ABS light does not turn on when the ignition is placed in the ON/RUN position, have the light inspected by an authorized dealer.</td>
<td>Drive carefully and contact an authorized dealer as soon as possible.</td>
</tr>
<tr>
<td><strong>TIRE PRESSURE MONITORING INDICATOR LIGHT</strong></td>
<td>The warning light switches on and a message is displayed to indicate that the tire pressure is lower than the recommended value and/or that slow pressure loss is occurring. In these cases, optimal tire duration and fuel consumption may not be guaranteed. Should one or more tires be in the condition mentioned above, the display will show the indications corresponding to each tire in sequence.</td>
<td>Continue driving for up to 50 miles (80 km) at a speed no higher then 50 mph (80 km/h). Contact an authorized dealer to have the tire repaired.</td>
</tr>
</tbody>
</table>

Each tire, including the spare (if provided), should be checked monthly when cold and inflated to the inflation pressure recommended by the vehicle manufacturer on the vehicle placard or tire inflation pressure label. If your vehicle has tires of a different size than the size indicated on the vehicle placard or tire inflation pressure label, you should determine the proper tire inflation pressure for those tires.

As an added safety feature, your vehicle has been equipped with a Tire Pressure Monitoring System (TPMS) that illuminates a low tire pressure telltale when one or more of your tires is significantly under-inflated. Accordingly, when the low tire pressure telltale illuminates, you should stop and check your tires as soon as possible and inflate them to the proper pressure. Driving on a significantly under-inflated tire causes the tire to overheat and can lead to tire failure. Under-inflation also reduces fuel efficiency and tire tread life, and may affect the vehicle’s handling and stopping ability.

Please note that the TPMS is not a substitute for proper tire maintenance, and it is the driver’s responsibility to maintain correct tire pressure, even if under-inflation has not reached the level to trigger illumination of the TPMS low tire pressure telltale.
Your vehicle has also been equipped with a TPMS malfunction indicator to indicate when the system is not operating properly. The TPMS malfunction indicator is combined with the low tire pressure telltale. When the system detects a malfunction, the telltale will flash for approximately one minute and then remain continuously illuminated. This sequence will continue upon subsequent vehicle start-ups as long as the malfunction exists. When the malfunction indicator is illuminated, the system may not be able to detect or signal low tire pressure as intended. TPMS malfunctions may occur for a variety of reasons, including the installation of replacement or alternate tires or wheels on the vehicle that prevent the TPMS from functioning properly. Always check the TPMS malfunction telltale after replacing one or more tires or wheels on your vehicle, to ensure that the replacement or alternate tires and wheels allow the TPMS to continue to function properly.

**CAUTION!**

The TPMS has been optimized for the original equipment tires and wheels. TPMS pressures and warning have been established for the tire size equipped on your vehicle. Undesirable system operation or sensor damage may result when using replacement equipment that is not of the same size, type, and/or style. Aftermarket wheels can cause sensor damage. Using aftermarket tire sealants may cause the Tire Pressure Monitoring System (TPMS) sensor to become inoperable. After using an aftermarket tire sealant it is recommended that you take your vehicle to an authorized dealership to have your sensor function checked.
## Warning Light

<table>
<thead>
<tr>
<th>Warning Light</th>
<th>What It Means</th>
<th>What To Do</th>
</tr>
</thead>
</table>
| **ESC**       | **Tire Pressure Low**  
The indicator light will illuminate to indicate that the tire pressure is lower than the recommended value and/or that slow pressure loss is occurring. In these cases, optimal tire duration and fuel consumption may not be guaranteed. | In any situation in which the message on the display is "See Manual", it is ESSENTIAL to refer to “Auxiliary Driving Systems” in “Safety,” strictly complying with the indications that you find there. |
| **ESC**       | **ELECTRONIC STABILITY CONTROL (ESC) INDICATOR LIGHT**  
When the ignition is cycled to ON, the indicator light illuminates, but should turn off as soon as the engine is started.  
**ESC System Intervention**: Intervention by the system is indicated by the flashing of the indicator light: it indicates that the vehicle is in critical stability and grip conditions.  
**ESC System Failure**: If the indicator light does not turn off, or if it stays on with the engine running, a failure was found in the ESC system.  
**Hill Start Assist System Failure**: The illumination of the indicator light indicates a Hill Start Assist system failure. | In these cases, contact an authorized dealer as soon as possible. |
| **ESC OFF**   | **ELECTRONIC STABILITY CONTROL (ESC) OFF INDICATOR LIGHT**  
When the ignition is cycled to ON, the indicator light illuminates, but should turn off as soon as the engine is started.  
The indicator light illuminates to indicate that some active safety systems have been partially or totally deactivated.  
For further details about the active safety systems, refer to “Active Safety Systems” in “Safety.” When the active safety systems are reactivated, the indicator light turns off. | |
<table>
<thead>
<tr>
<th>Warning Light</th>
<th>What It Means</th>
<th>What To Do</th>
</tr>
</thead>
</table>
| ![REAR FOG LIGHT](image) | **REAR FOG LIGHT**  
The indicator illuminates when the rear fog light is activated. | Under these conditions, the vehicle can continue traveling at moderate speed but without demanding excessive effort from the engine or high speed. Prolonged use of the vehicle with the indicator light on constantly may cause damage. Contact an authorized dealer as soon as possible. |
| ![ENGINE CHECK/MALFUNCTION INDICATOR LIGHT (MIL)](image) | **ENGINE CHECK/MALFUNCTION INDICATOR LIGHT (MIL)**  
In normal conditions, when the ignition is cycled to ON, the indicator light illuminates, but it should turn off as soon as the engine is started.  
The operation of the indicator light may be checked by the traffic police using specific devices. Comply with the laws and regulations of the country where you are driving. | Drive carefully and contact an authorized dealer as soon as possible. |
| ![FORWARD COLLISION WARNING SYSTEM (FCW) — IF EQUIPPED](image) | **FORWARD COLLISION WARNING SYSTEM (FCW) — IF EQUIPPED**  
This indicator light informs the driver that the frontal collision alarm function is not enabled. | |
| ![FUEL RESERVE / LIMITED RANGE](image) | **FUEL RESERVE / LIMITED RANGE**  
The indicator light (or the symbol in the display) illuminates when about 2.4 gallons (9 liters) of fuel is left in the tank. | Refuel the vehicle. |

**WARNING!**  
If the warning light (or the icon on the display) flashes while driving, contact an authorized dealer.
## GETTING TO KNOW YOUR INSTRUMENT PANEL

<table>

<th>What To Do</th>
</tr>
</thead>
</table>
| ![High Beam Headlights](image) | **HIGH BEAM HEADLIGHTS**  
This indicator shows that the high beam headlights are on. Push the multifunction control lever away from you to switch the headlights to high beam. Push the lever a second time to switch the headlights back to low beam. Pull the lever toward you for a temporary high beam on, “flash to pass” scenario. | ![Image](image) |

**Red Symbols**

<table>
<thead>
<tr>
<th>Symbol</th>
<th>What It Means</th>
<th>What To Do</th>
</tr>
</thead>
</table>
| ![Low Engine Oil Pressure](image) | **LOW ENGINE OIL PRESSURE**  
The symbol switches on constantly when the system detects that the engine oil pressure is insufficient.  
**NOTE:**  
Do not use the vehicle until the failure has been solved. The symbol does not indicate the amount of oil in the engine; the oil level can be checked on the instrument cluster display upon entering the vehicle and also by activating the "Oil level" function on the Information and Entertainment System. On the Quadrifoglio version, the oil level can also be checked manually. | ![Image](image) |

---

**CAUTION!**

If the **LOW ENGINE OIL PRESSURE** symbol switches on when driving, stop the engine immediately and contact an authorized dealer.
<table>
<thead>
<tr>
<th>Symbol</th>
<th>What It Means</th>
<th>What To Do</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="Engine Coolant Temperature Too High" /></td>
<td><strong>ENGINE COOLANT TEMPERATURE TOO HIGH</strong>  &lt;br&gt;The symbol lights up when the engine has overheated.  &lt;br&gt;<em>In normal driving conditions:</em> stop the car, switch off the engine and check that the coolant level in the reservoir is not below the MIN mark. In this case, wait for the engine to cool down, then slowly and carefully open the cap, top up with coolant and check that the level is between the MIN and MAX marks on the reservoir itself. Also check visually for any fluid leaks. Contact an authorized dealer if the symbol comes on when the engine is started again.  &lt;br&gt;<em>If the vehicle is used under demanding conditions (e.g. in high-performance driving):</em> slow down and, if the warning light stays on, stop the vehicle. Stop for two or three minutes with the engine running and slightly accelerated to facilitate better coolant circulation, then turn the engine off. Check that the coolant level is correct as described above.</td>
<td></td>
</tr>
<tr>
<td><img src="image" alt="Power Steering Failure" /></td>
<td><strong>POWER STEERING FAILURE</strong>  &lt;br&gt;If the symbol remains on, the steering wheel will become more difficult to turn, but steering will still be possible.</td>
<td>Contact an authorized dealer as soon as possible.</td>
</tr>
<tr>
<td><img src="image" alt="Door Open" /></td>
<td><strong>DOOR OPEN</strong>  &lt;br&gt;The symbol switches on when one or more doors are not completely shut. An acoustic signal is activated with the doors open and the car moving.</td>
<td>Close the doors properly.</td>
</tr>
</tbody>
</table>
The symbol turns on when the hood is not properly closed. Along with the symbol, an image of the vehicle with an open hood appears on the instrument cluster display. A buzzer is heard when the hood is open and the vehicle is moving.

Close the hood properly.

The symbol turns on when the trunk lid is not properly closed. Along with the symbol, an image of the vehicle with an open trunk lid appears on the instrument cluster display. A buzzer is heard when the trunk lid is open and the vehicle is moving.

Close the trunk lid properly.

The symbol switches on and a buzzer sounds to indicate a failure in the automatic transmission.

Contact an authorized dealer as soon as possible.

Driving the vehicle with this symbol on may severely damage the gearbox, with resulting breakage. The oil may also overheat: contact with hot engine or with exhaust components at high temperature could cause fires.
### ELECTRONIC THROTTLE CONTROL (ETC) WARNING LIGHTS

This warning light, along with the related message, signals a failure in the electronic throttle control system (ETC).

**What To Do**

Contact an authorized dealer as soon as possible.

If a failure is detected, the warning light switches on while the engine is running.

**What To Do**

Place the ignition in the off position and the shift selector in the Park position; the warning light should switch off. If the warning light stays on with engine running, the vehicle can still be driven. Contact an authorized dealer as soon as possible to have the failure eliminated.

If the warning light flashes with the engine running, immediate intervention is required. A loss of performance, irregular/high idling speed or engine stopping might take place and the vehicle may need to be towed.

**What To Do**

Contact an authorized dealer as soon as possible to have the failure eliminated.

### INSUFFICIENT ENGINE OIL LEVEL

The symbol switches on, along with the related message on the instrument cluster display, to indicate low engine oil level.

On the Quadrifoglio version, the level must also be checked using the dipstick in the engine compartment (see chapter “Servicing And Maintenance”).

**What To Do**

Contact an authorized dealer to have the system checked.

### ALFA STEERING TORQUE (AST) FAILURE

The switching on of the symbol signals a failure in the automatic steering correction system.

**What To Do**

Contact an authorized dealer to have the system checked.

### ALTERNATOR FAILURE

The switching on of the symbol with engine on corresponds to an alternator failure.

**What To Do**

Contact an authorized dealer as soon as possible.

</thead>
<tbody>
<tr>
<td><img src="image.png" alt="Fuel Cut-Off Indicator Light" /></td>
<td><strong>FUEL CUT-OFF INDICATOR LIGHT</strong>&lt;br&gt;The telltale will illuminate after an accident has occurred and the system has shut the fuel off.</td>
<td>For reactivating the fuel cut-off system, refer to &quot;Enhanced Accident Response System&quot; in &quot;Occupant Restraint Systems&quot; in &quot;Safety&quot; for further information. If it is not possible to restore the fuel supply, contact an authorized dealer.</td>
</tr>
<tr>
<td><img src="image.png" alt="Park Sensors System Failure" /></td>
<td><strong>PARK SENSORS SYSTEM FAILURE</strong>&lt;br&gt;The telltale will illuminate when the system has failed or is not available.</td>
<td>Contact an authorized dealer to have the system checked.</td>
</tr>
<tr>
<td><img src="image.png" alt="Engine Oil Change Required — If Equipped" /></td>
<td><strong>ENGINE OIL CHANGE REQUIRED — IF EQUIPPED</strong>&lt;br&gt;The telltale is illuminated only for a limited time.&lt;br&gt;&lt;br&gt;<strong>NOTE:</strong>&lt;br&gt;After the first indication, each time the engine is started the symbol will continue to illuminate as described above until the oil is changed.&lt;br&gt; If the telltale flashes, this does not mean that there is a fault on the vehicle, rather it simply reports that it is now necessary to change the oil as a result of regular use of the vehicle. The deterioration of engine oil is accelerated by using the vehicle for short drives, preventing the engine from reaching operating temperature.</td>
<td>Contact an authorized dealer as soon as possible.</td>
</tr>
</tbody>
</table>
**CAUTION!**

Deteriorated engine oil should be replaced as soon as possible after the symbol is switched on, and never more than 500 miles (805 km) after it first switches on. Failure to observe the above may result in severe damage to the engine and invalidate the New Vehicle Limited Warranty. When this symbol comes on, it does not mean that the level of engine oil is low, so if it flashes you do not need to top up the engine oil.

ONBOARD DIAGNOSTIC SYSTEM

Operation

The Onboard Diagnostic system (OBD) carries out a continuous diagnosis of the components of the vehicle related to emissions.

It also alerts the driver of when these components are no longer in peak condition by switching on the warning light on the instrument panel, see “Warning Lights And Messages” paragraph in this chapter.

The aim of the OBD system (Onboard Diagnostic) is to:

- Monitor the efficiency of the system
- Indicate an increase in emissions
- Indicate the need to replace damaged components

The vehicle also has a connector, which can interface with appropriate tools, that makes it possible to read the error codes stored in the electronic control units together with a series of specific parameters for engine operation and diagnosis. This check can be carried out by an authorized dealer.

NOTE:
After eliminating a fault, to check the system completely, an authorized dealer is obliged to run tests and, if necessary certain road tests.

Onboard Diagnostic System (OBD II)

Cybersecurity

Your vehicle is required to have an Onboard Diagnostic system (OBD II) and a connection port to allow access to information related to the performance of your emissions controls. Authorized service technicians may need to access this information to assist with the diagnosis and service of your vehicle and emissions system.

For further information, refer to "Cybersecurity" in "Multimedia".

WARNING!

- ONLY an authorized service technician should connect equipment to the OBD II connection port in order to read the VIN, diagnose, or service your vehicle.
- If unauthorized equipment is connected to the OBD II connection port, such as a driver-behavior tracking device, it may:
  - Be possible that vehicle systems, including safety related systems, could be impaired or a loss of vehicle control could occur that may result in an accident involving serious injury or death.

(Continued)
SAFETY

This very important section describes the safety systems that your vehicle may be equipped with, and provides instructions on how to use them correctly.

ACTIVE SAFETY SYSTEMS

The vehicle may be equipped with the following active safety devices:
- Anti-Lock Braking System (ABS)
- Drive Train Control (DTC) System
- Electronic Stability Control (ESC) System
- Traction Control System (TCS)
- Panic Brake Assist (PBA) System
- Hill Start Assist (HSA) System
- Dynamic Steering Torque (DST) System
- Active Torque Vectoring (ATV) System (If Equipped)

For the operation of the systems, see the following pages.

Anti-Lock Braking System (ABS)

An integral part of the braking system, the ABS prevents one or more wheels from locking and slipping in all road surface conditions, regardless of the intensity of the braking action. The system ensures that the vehicle can be controlled even during emergency braking, allowing the driver to optimize stopping distances.

The system intervenes during braking when the wheels are about to lock, typically in emergency braking or low-grip conditions where locking may be more frequent.

The system also improves control and stability of the vehicle when braking on a surface where the grip of the left and right wheels varies, such as in a corner.

The Electronic Braking Force Distribution (EBD) system works with the ABS, allowing the brake force to be distributed between the front and rear wheels.

System Intervention

The ABS equipped on this vehicle is provided with the "Brake-by-wire" (Integrated Brake System - IBS) function. With this system, the command given by pressing the brake pedal is not transmitted hydraulically, but electrically. Therefore, the light pulsation that is felt on the pedal with the traditional system is no longer noticeable.

WARNING!

- The ABS contains sophisticated electronic equipment that may be susceptible to interference caused by improperly installed or high output radio transmitting equipment. This interference can cause possible loss of anti-lock braking capability. Installation of such equipment should be performed by qualified professionals.

- Pumping of the Anti-Lock Brakes will diminish their effectiveness and may lead to a collision. Pumping makes the stopping distance longer. Just press firmly on your brake pedal when you need to slow down or stop.

- The ABS cannot prevent the natural laws of physics from acting on the vehicle, nor can it increase braking or steering efficiency beyond that afforded by the condition of the vehicle brakes and tires or the traction afforded.

- The ABS cannot prevent collisions, including those resulting from excessive speed in turns, following another vehicle too closely, or hydroplaning.

- The capabilities of an ABS equipped vehicle must never be exploited in a reckless or dangerous manner that could jeopardize the user's safety or the safety of others.

WARNING! (Continued)

(Continued)
Electronic Stability Control (ESC) System

The ESC system improves the directional control and stability of the vehicle in various driving conditions.

The ESC system corrects the vehicle’s understeer and oversteer, distributing the brake force on the appropriate wheels. The torque supplied by the engine can also be reduced in order to maintain control of the vehicle.

The ESC system uses sensors installed on the vehicle to determine the path that the driver intends to follow and compares it with the vehicle’s effective path. When the real path deviates from the desired path, the ESC system intervenes to counter the vehicle’s understeer or oversteer.

- **Oversteer** occurs when the vehicle is turning more than it should according to the angle of the steering wheel.
- **Understeer** occurs when the vehicle is turning less than it should according to the angle of the steering wheel.

System Intervention

The intervention of the system is indicated by the flashing of the ESC warning light on the instrument panel, to inform the driver that the vehicle stability and grip are critical.

**WARNING!**

- Electronic Stability Control (ESC) cannot prevent the natural laws of physics from acting on the vehicle, nor can it increase the traction afforded by prevailing road conditions. ESC cannot prevent accidents, including those resulting from excessive speed in turns, driving on very slippery surfaces, or hydroplaning. ESC also cannot prevent accidents resulting from loss of vehicle control due to inappropriate driver input for the conditions. Only a safe, attentive, and skillful driver can prevent accidents. The capabilities of an ESC equipped vehicle must never be exploited in a reckless or dangerous manner which could jeopardize the user’s safety or the safety of others.

**WARNING!** (Continued)

- Vehicle modifications, or failure to properly maintain your vehicle, may change the handling characteristics of your vehicle, and may negatively affect the performance of the ESC system. Changes to the steering system, suspension, braking system, tire type and size or wheel size may adversely affect ESC performance. Improperly inflated and unevenly worn tires may also degrade ESC performance. Any vehicle modification or poor vehicle maintenance that reduces the effectiveness of the ESC system can increase the risk of loss of vehicle control, vehicle rollover, personal injury and death.

**Traction Control System (TCS)**

The system automatically operates in the event of slipping, loss of grip on wet roads (hydroplaning), and acceleration on one or both drive wheels on roads that are slippery, snowy, icy, etc. Depending on the slipping conditions, two different control systems are activated:

- If the slipping involves both drive wheels, the system intervenes, reducing the power transmitted by the engine.
- If the slipping only involves one of the drive wheels, the Brake Limited Differential (BLD) function is activated, automati-
cally braking the wheel which is slipping (the behavior of a self-locking differential is simulated). This will increase the engine torque transferred to the wheel which isn't slipping.

System Intervention

The intervention of the system is indicated by the flashing of the ESC warning light on the instrument panel, to inform the driver that the vehicle stability and grip are critical.

Panic Brake Assist (PBA) System

The PBA system is designed to improve the vehicle's braking capacity during emergency braking.

The system detects emergency braking by monitoring the speed and force with which the brake pedal is pressed, and consequently applies the optimal brake pressure. This can reduce the braking distance; the PBA system therefore complements the ABS.

Maximum assistance from the PBA system is obtained by pressing the brake pedal very quickly. In addition, the brake pedal should be pressed continuously during braking, avoiding intermittent presses, to get the most out of the system. Do not reduce pressure on the brake pedal until braking is no longer necessary.

The PBA system is deactivated when the brake pedal is released.

⚠️ WARNING!

The Panic Brake Assist (PBA) cannot prevent the natural laws of physics from acting on the vehicle, nor can it increase the traction afforded by prevailing road conditions. PBA cannot prevent collisions, including those resulting from excessive speed in turns, driving on very slippery surfaces, or hydroplaning. The capabilities of a PBA-equipped vehicle must never be exploited in a reckless or dangerous manner, which could jeopardize the user's safety or the safety of others.

Hill Start Assist (HSA) System

This is an integral part of the ESC system and facilitates starting on slopes, activating automatically in the following cases:

- **Uphill**: vehicle stationary on a road with a gradient higher than 5%, engine running, brake pressed and transmission in NEUTRAL (N) or gear other than REVERSE (R) engaged.
- **Downhill**: vehicle stationary on a road with a gradient higher than 5%, engine running, brake pressed and reverse gear engaged.

When setting off, the ESC system control unit maintains the braking pressure on the wheels until the engine torque necessary for starting is reached, or in any case for a maximum of two seconds, allowing your right foot to be moved easily from the brake pedal to the accelerator.

The system will automatically deactivate after two seconds without starting, gradually releasing the braking pressure. During this release stage, it is possible to hear a typical mechanical brake release noise, indicating the imminent movement of the vehicle.

⚠️ WARNING!

There may be situations where the Hill Start Assist (HSA) will not activate and slight rolling may occur, such as on minor hills or with a loaded vehicle, or while pulling a trailer. HSA is not a substitute for active driving involvement. It is always the driver's responsibility to be attentive to distance to other vehicles, people, and objects, and most importantly brake operation to ensure safe operation of the vehicle under all road conditions. Your complete attention is always required while driving to maintain safe control of your vehicle. Failure to follow these warnings can result in a collision or serious personal injury.
**Dynamic Steering Torque (DST) System**

The DST function uses the integration of the ESC system with the electric power steering to increase the safety level of the whole vehicle.

In critical situations (braking on surfaces with different grip conditions), the ESC system controls the steering through the DST function to implement an additional torque contribution on the steering wheel in order to suggest the most correct maneuver to the driver.

The coordinated action of the brakes and steering increases the sensation of safety and control of the vehicle.

**NOTE:**
The DST feature is only meant to help the driver realize the correct course of action through small torques on the steering wheel, which means the effectiveness of the DST feature is highly dependent on the driver’s sensitivity and overall reaction to the applied torque. It is very important to realize that this feature will not steer the vehicle, meaning the driver is still responsible for steering the vehicle.

**Active Torque Vectoring (ATV) System — Quadrifoglio Only**
The dynamic drive control is used to optimize and balance the drive torque between the wheels of the same axles. The ATV system improves the grip in turns, sending more drive torque to the external wheel.

Given that, in a turn, the external wheels of the car travel more than the internal ones and therefore turn faster, sending a higher thrust to the external rear wheel allows for the car to be more stable and to not suffer an “understeer” condition. Understeer occurs when the vehicle is turning less than appropriate for the steering wheel position.

**AUXILIARY DRIVING SYSTEMS**
The following auxiliary driving systems are available in this vehicle:

- Blind Spot Monitoring (BSM) — If Equipped
- Forward Collision Warning (FCW) — If Equipped
- Tire Pressure Monitoring System (TPMS)

**Blind Spot Monitoring (BSM) System — If Equipped**
The Blind Spot Monitoring (BSM) system uses two radar sensors, located in the rear bumper (one for each side), to detect the presence of other vehicles in the rear side blind spots of your vehicle.
When the engine is started the warning light turns on to signal the driver that the system is active.

**Sensors**

The sensors are activated when any forward gear is engaged at a speed higher than 6 mph (10 km/h) or when REVERSE is engaged.

The sensors are temporarily deactivated when the vehicle is in PARK.

The detection area of the system covers approximately one lane on both sides of the vehicle.

This area begins from the door mirror and extends for 19 ft (6 m) towards the rear part of the vehicle.

When the sensors are active, the system monitors the detection areas on both sides of the vehicle and warns the driver about the possible presence of vehicles in these areas.

While driving, the system monitors the detection area from three different points (side, rear and front) to check whether an alert needs to be sent to the driver. The system can detect the presence of a vehicle in one of these three areas.

**NOTE:**

- The system does not alert the driver for the presence of fixed object (e.g. safety barriers, poles, walls, etc.). However, in some circumstances, the system may activate in the presence of these objects. This is normal and does not indicate a system malfunction.

- The system does not alert the driver about the presence of vehicles coming from the opposite direction, in the adjacent lanes.

**WARNING!**

The Blind Spot Monitoring system is only an aid to help detect objects in the blind spot zones. The BSM system is not designed to detect pedestrians, bicyclists, or animals. Even if your vehicle is equipped with the BSM system, always check your vehicle’s mirrors, glance over your shoulder, and use your turn signal before changing lanes. Failure to do so can result in serious injury or death.

**Rear View**

The system detects vehicles coming from the rear part of your vehicle on both sides and entering the rear detection area with a difference in speed of less than 31 mph (50 km/h) with relation to your vehicle.

**Overtaking Vehicles**

If another vehicle is overtaken slowly, with a difference in speed of less than 15 mph (25 km/h) and the vehicle stays in the blind spot for approximately 1.5 seconds, the warning light on the door mirror of the corresponding side illuminates.

If the difference in speed between the two vehicles is greater than 15 mph (25 km/h), the warning light will not illuminate.

**Rear Cross Path Detection (RCP) System**

This system helps the driver during reverse maneuvers in the case of reduced visibility.

The RCP system monitors the rear detection areas on both sides of the vehicle to detect objects moving towards the sides of the vehicle, with a minimum speed between 1 mph (1 km/h) and 2 mph (3 km/h) and objects moving at a maximum speed of 21 mph (35 km/h), in areas such as parking lots.

The system activation is signaled to the driver by an audible warning.

**NOTE:**

- If the sensors are covered by objects or vehicles, the system will not warn the driver.

- For the system to operate correctly, the rear bumper area where the radar sensors are located must stay free from snow, ice and dirt gathered from the road surface.

- Do not cover the rear bumper area where the radar sensors are located with any object (e.g. adhesives, bike rack, etc.).
Operating Mode

The system may be activated/deactivated via the Information and Entertainment System. To access the function, select the following items on the main menu in sequence:

1. "Settings."
2. "Safety."
3. "Blind Spot Alert."

"Blind Spot Alert" Visual Mode

When the system is enabled, the warning light within the door mirror on the side of the detected object illuminates.

The visual warning on the mirror will blink if the driver activates the turn signals, indicating a lane change.

The warning will be fixed if the driver stays in the same lane.

"Blind Spot Alert" Function Deactivation

When the system is deactivated ("Blind Spot Alert" mode off), the BSM or RCP systems will not emit an audible or a visual warning.

The BSM system will store the operating mode running when the engine was stopped. Each time the engine is started, the operating mode stored previously will be recalled and used.

General Information

This vehicle has systems that operate on radio frequency that comply with Part 15 of the Federal Communications Commission (FCC) rules and with Industry Canada Standards RSS-GEN/210/220/310.

Operation is subject to the following two conditions:

1. The device may not cause harmful interference.
2. The device must accept any interference received, including interference that may cause undesired operation of the device.

Changes or modifications to any of these systems by other than an authorized service facility could void authorization to use this equipment.

Forward Collision Warning (FCW) System — If Equipped

This is a driving assistance system which comprises a radar located behind the front bumper and a camera located in the central part of the windshield.

Rear Cross Path Detection (RCP) is not a back up aid system. It is intended to be used to help a driver detect an oncoming vehicle in a parking lot situation. Drivers must be careful when backing up, even when using RCP. Always check carefully behind your vehicle, look behind you, and be sure to check for pedestrians, animals, other vehicles, obstructions, and blind spots before backing up. Failure to do so can result in serious injury or death.

WARNING!
In the event of an imminent collision, the system intervenes by automatically braking the vehicle to prevent the collision or reduce its effects.

The system provides the driver with audible and visual signals through dedicated messages on the instrument cluster display.

The system may lightly brake to warn the driver if a potential front end collision is detected (limited braking). Signals and limited braking are intended to allow the driver time to intervene.

In situations with the risk of collision, if the system detects no intervention by the driver, it provides automatic braking to help slow the vehicle and mitigate the potential front end collision (automatic braking). If intervention by the driver on the brake pedal is detected, but not deemed sufficient, the system may intervene in order to improve the reaction of the braking system by reducing vehicle speed further (additional assistance in braking stage).

The system will intervene automatically in case of imminent collision or impact against a pedestrian crossing the road (speed under 31 mph (50 km/h)).

NOTE: For safety reasons, when the vehicle has stopped, the brake calipers may remain blocked for about two seconds. Make sure to press the brake pedal if the vehicle moves slightly forward.

WARNING!
Forward Collision Warning (FCW) is not intended to avoid a collision on its own, nor can FCW detect every type of potential collision. The driver has the responsibility to avoid a collision by controlling the vehicle via braking and steering. Failure to follow this warning could lead to serious injury or death.

Engagement/Disengagement
The following functions can be selected in sequence using the Information and Entertainment System:
1. “Settings.”
2. “Safety.”
3. “Forward Collision Warning.”
4. “Mode.”
Select from among three operating modes:

- **Warning And Brake:** the system (if active), in addition to the visual and audible warnings, provides limited braking, automatic braking, and additional assistance in braking stage where the driver does not brake sufficiently in the event of a potential front end collision.

- **Only Warning:** the system (if active), does not provide limited braking, but guarantees automatic braking or additional assistance in braking stage where the driver does not brake at all or not sufficiently enough in the event of a potential front end collision.

- **Disabled:** the system does not provide visual and audible warnings, limited braking, automatic braking, or additional assistance in braking stage. The system will therefore provide no indication of a possible collision.

Activation/Deactivation
The Forward Collision Warning system is activated whenever the engine is started regardless of what is shown on the Information and Entertainment System.

Following a deactivation, the system will not warn the driver about the possible collision with the preceding vehicle, regardless of the setting selected with the Information and Entertainment System.

NOTE: Each time the engine is started, the system is activated regardless of what setting was selected when the engine was turned OFF.
The system is active:
\(\square\) Each time the engine is started.
\(\square\) In the Information and Entertainment System.
\(\square\) When the ignition is in the ON position.
\(\square\) The vehicle speed is between 4 mph (7 km/h) and 124 mph (200 km/h).
\(\square\) When the front seat belts are fastened.

**Changing The System Sensitivity**
The sensitivity of the system can be changed through the Information and Entertainment System menu, choosing from one of the following three options: "Near", "Med" or "Far". Refer to the description in the “Information and Entertainment System Supplement” for how to change the settings.

The default setting is "Med". With this setting, the system warns the driver of a possible collision with the vehicle in front when that vehicle is at a standard distance, between that of the other two settings.

With the system sensitivity set to "Far", the system will warn the driver of a possible collision with the vehicle in front when that vehicle is at a greater distance, thus providing the possibility of acting on the brakes more lightly and gradually. This setting provides the drivers with the maximum possible reaction time to prevent a potential collision.

With the option set to "Near", the system will alert the driver of a possible collision with the vehicle in front when that vehicle is close. This setting offers the driver a lower reaction time compared to the "Med" and "Far" settings, in the event of a potential collision, but permits more dynamic driving of the vehicle.

The system sensitivity setting is kept in the memory when the engine is turned OFF.

**System Limited Operation Signal**
If a dedicated message is displayed, a condition limiting the system operation may have occurred. The possible reasons of this limitation are if something is blocking the camera view, or a fault is present.

If an obstruction is signaled, clean the area of the windshield. Although the vehicle can still be driven in normal conditions, the system may be not completely available.

When the conditions limiting the system functions end, this will go back to normal and complete operation. Should the fault persist, contact your authorized dealer.

**System Failure Signaling**
If the system turns off and a dedicated message is shown on the display, it means that there is a fault with the system.

In this case, it is still possible to drive the vehicle, but you are advised to contact your authorized dealer as soon as possible.

**Radar Indication Not Available**
If conditions are such that the radar cannot detect obstacles correctly, the system is deactivated and a dedicated message appears on the display. This generally occurs in the event of poor visibility, such as when it is snowing or raining heavily.

The function of this system can also be temporarily reduced due to obstructions such as mud, dirt or ice on the bumper. In such cases, a dedicated message will be shown on the display and the system will be deactivated. This message can sometimes appear in conditions of high reflectivity (e.g. tunnels with reflective tiles or ice or snow). When the conditions limiting the system functions end, it will go back to normal and complete operation.

In certain cases, this dedicated message could be displayed when the radar is not detecting any vehicles or objects within its view range.

If atmospheric conditions are not the reason behind this message, check if the sensor is dirty. It could be necessary to clean or remove any obstructions in the area.

If the message appears frequently, even in the absence of atmospheric conditions such as snow, rain, mud or other obstructions,
contact your authorized dealer for a sensor alignment check.

In the absence of visible obstructions, manually removing the decorative cover trim and cleaning the radar surface could be required. Have this operation performed at your authorized dealer.

**NOTE:**
It is recommended that you do not install devices, accessories, or aerodynamic attachments in front of the sensor or darken it in any way, as this can compromise the correct functioning of the system.

**Frontal Collision Alarm With Active Braking**
If this function is selected, the brakes are operated to reduce the speed of the vehicle in the event of potential collision.

This function applies an additional braking pressure if the braking pressure applied by the driver does not suffice to prevent potential collision.

The function is active with speed above 4 mph (7 km/h).

---

**Driving In Special Conditions**
In certain driving conditions, system intervention might be unexpected or delayed. The driver must therefore be very careful, keeping control of the vehicle.

- Driving close to a bend.
- The vehicle ahead is leaving a roundabout.
- Vehicles with small dimensions and/or not aligned in the driving lane.
- Lane change by other vehicles.
- Vehicles traveling at right angles to the vehicle.

**NOTE:**
In particularly complex traffic conditions, the driver can deactivate the system manually through the Information and Entertainment System.

---

**Driving Close To A Bend**
When entering or leaving a wide bend, the system may detect a vehicle in front you, but not in the same driving lane. In cases such as these, the system may intervene.

**Driving Around Wide Curves**
The Vehicle Ahead Is Leaving A Roundabout
On a roundabout, the system could intervene if it detects a vehicle ahead which is leaving the roundabout.

Driving In Roundabouts

Vehicles With Small Dimensions And/Or Not Aligned In The Driving Lane
The system cannot detect vehicles in front of you but outside the range of the radar sensor and may therefore not react in the presence of small vehicles, such as bicycles or motorcycles.

Driving Near Small Vehicles

Lane Change By Other Vehicles
Vehicles suddenly changing lanes to enter the same lane as your vehicle within the operating range of the radar sensor, may cause the system to intervene.

Other Vehicles Changing Lanes

Vehicles Traveling At Right Angles To The Vehicle
The system may temporarily react to a vehicle that is passing through the radar sensor’s operating range at right angles.

Other Vehicle Passing Through Radar Range

WARNING!
☐ The system has not been designed to prevent impacts and cannot detect possible conditions leading to an accident in advance. Failure to take into account this warning may lead to serious or fatal injuries.

(Continued)
SAFETY

General Information

This vehicle has systems that operate on radio frequency that comply with Part 15 of the Federal Communications Commission (FCC) rules and with Industry Canada Standards RSS-GEN/210/220/310.

Operation is subject to the following two conditions:
1. The device may not cause harmful interference.
2. The device must accept any interference received, including interference that may cause undesired operation of the device.

Changes or modifications to any of these systems by other than an authorized service facility could void authorization to use this equipment.

Tire Pressure Monitoring System (TPMS)

This vehicle is equipped with a Tire Pressure Monitoring System (TPMS) that sends the inflation pressure information of each tire to the control unit, and will signal the driver in the event of insufficient tire pressure.

Tire pressure will vary with temperature by approximately 1 psi (7 kPa) for every 12°F (6.5°C). This means that when the outside temperature decreases, the tire pressure will also decrease. Tire pressure should always be set based on cold inflation tire pressure. This is defined as the tire pressure after the vehicle has not been driven for at least three hours, or driven less than 1 mile (1.6 km) after a three hour period. The cold tire inflation pressure must not exceed the maximum inflation pressure molded into the tire sidewall. Refer to “Tires” in “Servicing And Maintenance” for information on how to properly inflate the vehicle’s tires. The tire pressure will also increase as the tires are driven. This is normal, and there should be no adjustment for this increased pressure.

The TPMS will signal the driver if pressure falls below the warning limit for any reason, including the effects of low temperature and normal loss of pressure from the tire.

The TPMS will stop indicating insufficient tire pressure when pressure is equal to or greater than the prescribed cold inflation level. Therefore, if insufficient tire pressure is indicated by the ( ) warning light displaying in the instrument cluster, increase the inflation pressure up to the prescribed cold inflation value.

The system will automatically update, and the “Tire Pressure Monitoring Telltale Light” will turn off once the system receives the updated tire pressures. The vehicle may need to be driven for up to 20 minutes above 15 mph (24 km/h) in order for the TPMS to receive this information.

Operating Example

For example, your vehicle may have a recommended cold (parked for more than three hours) placard pressure of 33 psi (227 kPa). If the ambient temperature is 68°F (20°C), and the measured tire pressure is 28 psi (193 kPa), a temperature drop to 20°F
(−7°C) will decrease the tire pressure to approximately 24 psi (165 kPa). This tire pressure is low enough to turn on the “Tire Pressure Monitoring Warning Light.” Driving the vehicle may cause the tire pressure to rise to approximately 28 psi (193 kPa), but the “Tire Pressure Monitoring Telltale Light” will still be on. In this situation, the “Tire Pressure Monitoring Warning Light” will turn off only after the tires are inflated to the vehicle’s recommended cold placard pressure value.

### CAUTION!

- The TPMS has been optimized for the original equipment tires and wheels. TPMS pressures and warning have been established for the tire size equipped on your vehicle. Undesirable system operation or sensor damage may result when using replacement equipment that is not of the same size, type, and/or style. The TPM sensor is not designed for use on aftermarket wheels and may contribute to a poor overall system performance or sensor damage. Customers are encouraged to use OEM wheels to assure proper TPM feature operation.

(Continued)
To deactivate the TPMS, first replace all four wheel and tire assemblies (road tires) with tires not equipped with Tire Pressure Monitoring (TPM) Sensors. Then, drive the vehicle for 20 minutes above 15 mph (24 km/h). The TPMS will chime, the "TPM Telltale Light" will flash on and off for 75 seconds and then remain on. The instrument cluster will display the “SERVICE TPM SYSTEM” message and then display dashes (--) in place of the pressure values.

Beginning with the next ignition switch cycle, the TPMS will no longer chime or display the “SERVICE TPM SYSTEM” message in the instrument cluster. Instead, dashes (--) will remain in place of the pressure values.

To reactivate the TPMS, replace all four wheel and tire assemblies (road tires) with tires equipped with TPM sensors. Then, drive the vehicle for up to 20 minutes above 15 mph (24 km/h). The TPMS will chime, the "TPM Telltale Light" will flash on and off for 75 seconds and then turn off. The instrument cluster will display the “SERVICE TPM SYSTEM” message and then display pressure values in place of the dashes. On the next ignition switch cycle the "SERVICE TPM SYSTEM" message will no longer be displayed, as long as no system fault exists.

NOTE:
- The TPMS is not intended to replace normal tire care and maintenance, or to provide warning of a tire failure or condition.
- The TPMS should not be used as a tire pressure gauge while adjusting your tire pressure.
- Driving on a significantly underinflated tire will cause the tire to overheat, and can lead to tire failure. Underinflation also reduces fuel efficiency and tire tread life, and may affect the vehicle’s handling and stopping ability.
- The TPMS is not a substitute for proper tire maintenance, and it is the driver’s responsibility to maintain correct tire pressure using an accurate tire pressure gauge, even if underinflation has not reached the level to trigger illumination of the "Tire Pressure Monitoring Telltale Light".
- Seasonal temperature changes will affect tire pressure, and the TPMS will monitor the actual tire pressure in the tire.

General Information

The following regulatory statement applies to all radio frequency (RF) devices equipped in this vehicle:

This device complies with Part 15 of the FCC rules and RSS-210 of Industry Canada. Operation is subject to the following two conditions:

1. This device may not cause harmful interference.
2. This device must accept any interference received, including interference that may cause undesired operation.

NOTE:
Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

OCCUPANT RESTRAINT SYSTEMS

Some of the most important safety features in your vehicle are the restraint systems:

**Occupant Restraint Systems Features**
- Seat Belt Systems
- Supplemental Restraint Systems (SRS)
  - Air Bags
- Child Restraints

Some of the safety features described in this section may be standard equipment on some models, or may be optional equipment on others. If you are not sure, ask an authorized dealer.
Important Safety Precautions

Please pay close attention to the information in this section. It tells you how to use your restraint system properly, to keep you and your passengers as safe as possible.

Here are some simple steps you can take to minimize the risk of harm from a deploying air bag:

1. Children 12 years old and under should always ride buckled up in the rear seat of a vehicle with a rear seat.
2. A child who is not big enough to wear the vehicle seat belt properly (Refer to “Child Restraints” in this section for further information) must be secured in the appropriate child restraint or belt-positioning booster seat in a rear seating position.
3. If a child from 2 to 12 years old (not in a rear-facing child restraint) must ride in the front passenger seat, move the seat as far back as possible and use the proper child restraint (Refer to “Child Restraints” in this section for further information).
4. Never allow children to slide the shoulder belt behind them or under their arm.
5. You should read the instructions provided with your child restraint to make sure that you are using it properly.
6. All occupants should always wear their lap and shoulder belts properly.
7. The driver and front passenger seats should be moved back as far as practical to allow the front air bags room to inflate.
8. Do not lean against the door or window. If your vehicle has side air bags, and deployment occurs, the side air bags will inflate forcefully into the space between occupants and the door and occupants could be injured.
9. If the air bag system in this vehicle needs to be modified to accommodate a disabled person, refer to the “Customer Assistance” section for customer service contact information.

Seat Belt Systems

Buckle up even though you are an excellent driver, even on short trips. Someone on the road may be a poor driver and could cause a collision that includes you. This can happen far away from home or on your own street.

Research has shown that seat belts save lives, and they can reduce the seriousness of injuries in a collision. Some of the worst injuries happen when people are thrown from the vehicle. Seat belts reduce the possibility of ejection and the risk of injury caused by striking the inside of the vehicle. Everyone in a motor vehicle should be belted at all times.

Enhanced Seat Belt Use Reminder System (BeltAlert)

Driver and Passenger BeltAlert (If Equipped)

BeltAlert is a feature intended to remind the driver and outboard front seat passenger (if equipped with outboard front passenger seat BeltAlert) to buckle their seat belts. The Belt Alert feature is active whenever the ignition switch is in the AVV/START or ON/RUN position.

Initial Indication

If the driver is unbuckled when the ignition switch is first in the AVV/START or ON/RUN position, a chime will signal for a few seconds. If the driver or outboard front seat passenger (if equipped with outboard front seat BeltAlert) is unbuckled, a chime will signal for a few seconds. If the outboard front passenger is unbuckled, a chime will signal for a few seconds.
passenger seat BeltAlert) is unbuckled when the ignition switch is first in the AVV/START or ON/RUN position the Seat Belt Reminder Light will turn on and remain on until both outboard front seat belts are buckled. The outboard front passenger seat BeltAlert is not active when an outboard front passenger seat is unoccupied.

BeltAlert Warning Sequence

The BeltAlert warning sequence is activated when the vehicle is moving above a specified vehicle speed range and the driver or outboard front seat passenger is unbuckled (if equipped with outboard front passenger seat BeltAlert) (the outboard front passenger seat BeltAlert is not active when the outboard front passenger seat is unoccupied). The BeltAlert warning sequence starts by blinking the Seat Belt Reminder Light and sounding an intermittent chime. Once the BeltAlert warning sequence has completed, the Seat Belt Reminder Light will remain on until the seat belts are buckled. The BeltAlert warning sequence may repeat based on vehicle speed until the driver and occupied outboard front seat passenger seat belts are buckled. The driver should instruct all occupants to buckle their seat belts.

Change of Status

If the driver or outboard front seat passenger (if equipped with outboard front passenger seat BeltAlert) unbuckles their seat belt while the vehicle is traveling, the BeltAlert warning sequence will begin until the seat belts are buckled again.

The outboard front passenger seat BeltAlert is not active when the outboard front passenger seat is unoccupied. BeltAlert may be triggered when an animal or other items are placed on the outboard front passenger seat or when the seat is folded flat (if equipped). It is recommended that pets be restrained in the rear seat (if equipped) in pet harnesses or pet carriers that are secured by seat belts, and cargo is properly stowed.

Lap/Shoulder Belts

All seating positions in your vehicle are equipped with lap/shoulder belts.

The seat belt webbing retractor will lock only during very sudden stops or collisions. This feature allows the shoulder part of the seat belt to move freely with you under normal conditions. However, in a collision the seat belt will lock and reduce your risk of striking the inside of the vehicle or being thrown out of the vehicle.

WARNING!

- Relying on the air bags alone could lead to more severe injuries in a collision. The air bags work with your seat belt to restrain you properly. In some collisions, the air bags won’t deploy at all. Always wear your seat belt even though you have air bags.

- In a collision, you and your passengers can suffer much greater injuries if you are not properly buckled up. You can strike the interior of your vehicle or other passengers, or you can be thrown out of the vehicle. Always be sure you and others in your vehicle are buckled up properly.

- It is dangerous to ride in a cargo area, inside or outside of a vehicle. In a collision, people riding in these areas are more likely to be seriously injured or killed.

- Do not allow people to ride in any area of your vehicle that is not equipped with seats and seat belts.

- Be sure everyone in your vehicle is in a seat and using a seat belt properly. Occupants, including the driver, should always wear their seat belts whether or not an air bag is also provided at their seating position to minimize the risk of severe injury or death in the event of a crash.

- Wearing your seat belt incorrectly could make your injuries in a collision much worse. You might suffer internal injuries, or you could even slide out of the seat belt. Follow these instructions to wear your seat belt safely and to keep your passengers safe, too.
Lap/Shoulder Belt Operating Instructions

1. Enter the vehicle and close the door. Sit back and adjust the seat.

2. The seat belt latch plate is above the back of the front seat, and next to your arm in the rear seat (for vehicles equipped with a rear seat). Grasp the latch plate and pull out the seat belt. Slide the latch plate up the webbing as far as necessary to allow the seat belt to go around your lap.

3. When the seat belt is long enough to fit, insert the latch plate into the buckle until you hear a “click.”

4. Position the lap belt so that it is snug and lies low across your hips, below your abdomen. To remove slack in the lap belt portion, pull up on the shoulder belt. To

---

**WARNING!**

- Two people should never be belted into a single seat belt. People belted together can crash into one another in a collision, hurting one another badly. Never use a lap/shoulder belt or a lap belt for more than one person, no matter what their size.

- A lap belt worn too high can increase the risk of injury in a collision. The seat belt forces won’t be at the strong hip and pelvic bones, but across your abdomen. Always wear the lap part of your seat belt as low as possible and keep it snug.

- A twisted seat belt may not protect you properly. In a collision, it could even cut into you. Be sure the seat belt is flat against your body, without twists. If you can’t straighten a seat belt in your vehicle, take it to an authorized dealer immediately and have it fixed.

- A seat belt that is buckled into the wrong buckle will not protect you properly. The lap portion could ride too high on your body, possibly causing internal injuries. Always buckle your seat belt into the buckle nearest you.

---

**WARNING! (Continued)**

- A seat belt that is too loose will not protect you properly. In a sudden stop, you could move too far forward, increasing the possibility of injury. Wear your seat belt snugly.

- A seat belt that is worn under your arm is dangerous. Your body could strike the inside surfaces of the vehicle in a collision, increasing head and neck injury. A seat belt worn under the arm can cause internal injuries. Ribs aren’t as strong as shoulder bones. Wear the seat belt over your shoulder so that your strongest bones will take the force in a collision.

- A shoulder belt placed behind you will not protect you from injury during a collision. You are more likely to hit your head in a collision if you do not wear your shoulder belt. The lap and shoulder belt are meant to be used together.

- A frayed or torn seat belt could rip apart in a collision and leave you with no protection. Inspect the seat belt system periodically, checking for cuts, frays, or loose parts. Damaged parts must be replaced immediately. Do not disassemble or modify the seat belt system. Seat belt assemblies must be replaced after a collision.

---

(Continued)
loosen the lap belt if it is too tight, tilt the latch plate and pull on the lap belt. A snug seat belt reduces the risk of sliding under the seat belt in a collision.

5. Position the shoulder belt across the shoulder and chest with minimal, if any slack so that it is comfortable and not resting on your neck. The retractor will withdraw any slack in the shoulder belt.

6. To release the seat belt, push the red button on the buckle. The seat belt will automatically retract to its stowed position. If necessary, slide the latch plate down the webbing to allow the seat belt to retract fully.

Lap/Shoulder Belt Untwisting Procedure

Use the following procedure to untwist a twisted lap/shoulder belt.

1. Position the latch plate as close as possible to the anchor point.

2. At about 6 to 12 inches (15 to 30 cm) above the latch plate, grasp and twist the seat belt webbing 180 degrees to create a fold that begins immediately above the latch plate.

3. Slide the latch plate upward over the folded webbing. The folded webbing must enter the slot at the top of the latch plate.

4. Continue to slide the latch plate up until it clears the folded webbing and the seat belt is no longer twisted.
The second row center seat belt features a seat belt with a mini-latch plate and buckle, which allows the seat belt to detach from the lower anchor when the seat is folded. The mini-latch plate and regular latch plate can then be stored out of the way in the parcel tray for added convenience to open up utilization of the storage areas behind the front seats when the seat is not occupied.

1. Remove the mini-latch plate and regular latch plate from its stowed position in the right rear side trim panel.
2. Grasp the mini-latch plate and pull the seat belt over the seat.
3. Route the shoulder belt to the inside of the right head restraint.
4. When the seat belt is long enough to fit, insert the mini-latch plate into the mini-buckle until you hear a "click."
5. Sit back in seat. Slide the regular latch plate up the webbing as far as necessary to allow the seat belt to go around your lap.
6. When the seat belt is long enough to fit, insert the latch plate into the buckle until you hear a "click."
7. Position the lap belt so that it is snug and lies low across your hips, below your abdomen. To remove slack in the lap belt portion, pull up on the shoulder belt. To loosen the lap belt if it is too tight, pull on the lap belt. A snug seat belt reduces the risk of sliding under the seat belt in a collision.
8. Position the shoulder belt on your chest so that it is comfortable and not resting on your neck. The retractor will withdraw any slack in the seat belt.
9. To release the seat belt, push the red button on the buckle.
10. To disengage the mini-latch plate from the mini-buckle for storage, insert the regular latch plate into the black button on the top of the mini-buckle. The seat belt will automatically retract to its stowed position. If necessary, slide the latch plate down the webbing to allow the seat belt to retract fully. Insert the mini-latch plate and regular latch plate into its stowed position.

Seat Belts And Pregnant Women

Seat belts must be worn by all occupants including pregnant women: the risk of injury in the event of an accident is reduced for the mother and the unborn child if they are wearing a seat belt.

Pregnant Women And Seat Belts

Seat belts must be worn by all occupants including pregnant women: the risk of injury in the event of an accident is reduced for the mother and the unborn child if they are wearing a seat belt.

WARNING!

- If the mini-latch plate and mini-buckle are not properly connected when the seat belt is used by an occupant, the seat belt will not be able to provide proper restraint and will increase the risk of injury in a collision.

(Continued)
Position the lap belt snug and low below the abdomen and across the strong bones of the hips. Place the shoulder belt across the chest and away from the neck. Never place the shoulder belt behind the back or under the arm.

**Seat Belt Pretensioner**

The front outboard seat belt system is equipped with pretensioning devices that are designed to remove slack from the seat belt in the event of a collision. These devices may improve the performance of the seat belt by removing slack from the seat belt early in a collision. Pretensioners work for all size occupants, including those in child restraints.

**NOTE:**
These devices are not a substitute for proper seat belt placement by the occupant. The seat belt still must be worn snugly and positioned properly.

The pretensioners are triggered by the Occupant Restraint Controller (ORC). Like the air bags, the pretensioners are single use items. A deployed pretensioner or a deployed air bag must be replaced immediately.

**Energy Management Feature**

The front outboard seat belt system is equipped with an Energy Management feature that may help further reduce the risk of injury in the event of a collision. The seat belt system has a retractor assembly that is designed to release webbing in a controlled manner.

**Switchable Automatic Locking Retractors (ALR)**

The seat belts in the passenger seating positions are equipped with a Switchable Automatic Locking Retractor (ALR) which is used to secure a child restraint system. For additional information, refer to “Installing Child Restraints Using The Vehicle Seat Belt” under the “Child Restraints” section of this manual. The figure below illustrates the locking feature for each seating position.

![ALR — Switchable Automatic Locking Retractor](image)

If the passenger seating position is equipped with an ALR and is being used for normal usage, only pull the seat belt webbing out far enough to comfortably wrap around the occupant's mid-section so as to not activate the ALR. If the ALR is activated, you will hear a clicking sound as the seat belt retracts. Allow the webbing to retract completely in this case and then carefully pull out only the amount of webbing necessary to comfortably wrap around the occupant’s mid-section. Slide the latch plate into the buckle until you hear a "click."

In Automatic Locking Mode, the shoulder belt is automatically pre-locked. The seat belt will still retract to remove any slack in the shoulder belt. Use the Automatic Locking Mode anytime a child restraint is installed in a seating position that has a seat belt with this feature. Children 12 years old and under should always be properly restrained in the rear seat of a vehicle with a rear seat.

**WARNING!**

- Never place a rear-facing child restraint in front of an air bag. A deploying passenger front air bag can cause death or serious injury to a child 12 years or younger, including a child in a rear-facing child restraint.
- Never install a rear-facing child restraint in the front seat of a vehicle. Only use a rear-facing child restraint in the rear seat. If the vehicle does not have a rear seat, do not transport a rear-facing child restraint in that vehicle.
How To Engage The Automatic Locking Mode

1. Buckle the combination lap and shoulder belt.
2. Grasp the shoulder portion and pull downward until the entire seat belt is extracted.
3. Allow the seat belt to retract. As the seat belt retracts, you will hear a clicking sound. This indicates the seat belt is now in the Automatic Locking Mode.

How To Disengage The Automatic Locking Mode

Unbuckle the combination lap/shoulder belt and allow it to retract completely to disengage the Automatic Locking Mode and activate the vehicle sensitive (emergency) locking mode.

Supplemental Restraint Systems (SRS)

Some of the safety features described in this section may be standard equipment on some models, or may be optional equipment on others. If you are not sure, ask an authorized dealer.

The air bag system must be ready to protect you in a collision. The Occupant Restraint Controller (ORC) monitors the internal circuits and interconnecting wiring associated with the electrical Air Bag System Components. Your vehicle may be equipped with the following Air Bag System Components:

- Occupant Restraint Controller (ORC)
- Air Bag Warning Light
- Steering Wheel and Column
- Instrument Panel
- Knee Impact Bolsters
- Driver and Front Passenger Air Bags
- Seat Belt Buckle Switch
- Supplemental Side Air Bags
- Supplemental Knee Air Bags
- Front and Side Impact Sensors
- Seat Belt Pretensioners
- Seat Track Position Sensors

Air Bag Warning Light

The ORC monitors the readiness of the electronic parts of the air bag system whenever the ignition switch is in the START or ON/RUN position. If the ignition switch is in the OFF position or in the ACC position, the air bag system is not on and the air bags will not inflate.

The ORC contains a backup power supply system that may deploy the air bag system even if the battery loses power or it becomes disconnected prior to deployment.

The ORC turns on the Air Bag Warning Light in the instrument panel for approximately four to eight seconds for a self-check when the ignition switch is first in the ON/RUN position. After the self-check, the Air Bag Warning Light will turn off. If the ORC detects a malfunction in any part of the system, it turns on the Air Bag Warning Light, either momentarily or continuously. A

WARNING!

- The seat belt assembly must be replaced if the switchable Automatic Locking Retractor (ALR) feature or any other seat belt function is not working properly when checked according to the procedures in the Service Manual.
- Failure to replace the seat belt assembly could increase the risk of injury in collisions.

(Continued)
SAFETY

A single chime will sound to alert you if the light comes on again after initial startup.

The ORC also includes diagnostics that will illuminate the instrument panel Air Bag Warning Light if a malfunction is detected that could affect the air bag system. The diagnostics also record the nature of the malfunction. While the air bag system is designed to be maintenance free, if any of the following occurs, have an authorized dealer service the air bag system immediately.

- The Air Bag Warning Light does not come on during the four to eight seconds when the ignition switch is first in the ON/RUN position.
- The Air Bag Warning Light remains on after the four to eight-second interval.
- The Air Bag Warning Light comes on intermittently or remains on while driving.

NOTE:
If the speedometer, tachometer, or any engine related gauges are not working, the Occupant Restraint Controller (ORC) may also be disabled. In this condition the air bags may not be ready to inflate for your protection. Have an authorized dealer service the air bag system immediately.

WARNING!
Ignoring the Air Bag Warning Light in your instrument panel could mean you won’t have the air bag system to protect you in a collision. If the light does not come on as a bulb check when the ignition is first turned on, stays on after you start the vehicle, or if it comes on as you drive, have an authorized dealer service the air bag system immediately.

Front Air Bags
This vehicle has front air bags and lap/shoulder belts for both the driver and front passenger. The front air bags are a supplement to the seat belt restraint systems. The driver front air bag is mounted in the center of the steering wheel. The passenger front air bag is mounted in the instrument panel, above the glove compartment. The words “SRS AIRBAG” or “AIRBAG” are embossed on the air bag covers.

Redundant Air Bag Warning Light
If a fault with the Air Bag Warning Light is detected, which could affect the Supplemental Restraint System (SRS), the Redundant Air Bag Warning Light will illuminate on the instrument panel. The Redundant Air Bag Warning Light will stay on until the fault is cleared. In addition, a single chime will sound to alert you that the Redundant Air Bag Warning Light has come on and a fault has been detected. If the Redundant Air Bag Warning Light comes on intermittently or remains on while driving have an authorized dealer service the vehicle immediately.

For additional information regarding the Redundant Air Bag Warning Light refer to “Getting To Know Your Instrument Panel” section of this manual.
Driver And Passenger Front Air Bag Features

The Advanced Front Air Bag system has multistage driver and front passenger air bags. This system provides output appropriate to the severity and type of collision as determined by the Occupant Restraint Controller (ORC), which may receive information from the front impact sensors (if equipped) or other system components.

The first stage inflator is triggered immediately during an impact that requires air bag deployment. A low energy output is used in less severe collisions. A higher energy output is used for more severe collisions.

This vehicle may be equipped with a driver and/or front passenger seat belt buckle switch that detects whether the driver or front passenger seat belt is buckled. The seat belt buckle switch may adjust the inflation rate of the Advanced Front Air Bags.

This vehicle may be equipped with driver and/or front passenger seat track position sensors that may adjust the inflation rate of the Advanced Front Air Bags based upon seat position.

WARNING!

- No objects should be placed over or near the air bag on the instrument panel or steering wheel because any such objects could cause harm if the vehicle is in a collision severe enough to cause the air bag to inflate.

- Do not put anything on or around the air bag covers or attempt to open them manually. You may damage the air bags and you could be injured because the air bags may no longer be functional. The protective covers for the air bag cushions are designed to open only when the air bags are inflating.

WARNING!

- Being too close to the steering wheel or instrument panel during front air bag deployment could cause serious injury, including death. Air bags need room to inflate. Sit back, comfortably extending your arms to reach the steering wheel or instrument panel.

- Never place a rear-facing child restraint in front of an air bag. A deploying passenger front air bag can cause death or serious injury to a child 12 years or younger, including a child in a rear-facing child restraint.

- Never install a rear-facing child restraint in the front seat of a vehicle. Only use a rear-facing child restraint in the rear seat. If the vehicle does not have a rear seat, do not transport a rear-facing child restraint in that vehicle.

- Do not put anything on or around the air bag covers or attempt to open them manually. You may damage the air bags and you could be injured because the air bags may no longer be functional. The protective covers for the air bag cushions are designed to open only when the air bags are inflating.

(Continued)
SAFETY

90

Front Air Bag Operation

Front Air Bags are designed to provide additional protection by supplementing the seat belts. Front air bags are not expected to reduce the risk of injury in rear, side, or rollover collisions. The front air bags will not deploy in all frontal collisions, including some that may produce substantial vehicle damage — for example, some pole collisions, truck underrides, and angle offset collisions.

On the other hand, depending on the type and location of impact, front air bags may deploy in crashes with little vehicle front-end damage but that produce a severe initial deceleration.

Because air bag sensors measure vehicle deceleration over time, vehicle speed and damage by themselves are not good indicators of whether or not an air bag should have deployed.

Seat belts are necessary for your protection in all collisions, and also are needed to help keep you in position, away from an inflating air bag.

When the ORC detects a collision requiring the front air bags, it signals the inflator units. A large quantity of non-toxic gas is generated to inflate the front air bags.

The steering wheel hub trim cover and the upper passenger side of the instrument panel separate and fold out of the way as the air bags inflate to their full size. The front air bags fully inflate in less time than it takes to blink your eyes. The front air bags then quickly deflate while helping to restrain the driver and front passenger.

Knee Impact Bolsters

The Knee Impact Bolsters help protect the knees of the driver and front passenger, and position the front occupants for improved interaction with the front air bags.

Supplemental Driver And Front Passenger Knee Air Bags

This vehicle is equipped with a Supplemental Driver Knee Air Bag mounted in the instrument panel below the steering column and a Supplemental Passenger Knee Air Bag mounted in the instrument panel below the glove compartment. The Supplemental Knee Air Bags provide enhanced protection during a frontal impact by working together with the seat belts, pretensioners, and front air bags.

WARNING!

☐ Relying on the air bags alone could lead to more severe injuries in a collision. The air bags work with your seat belt to restrain you properly. In some collisions, air bags won’t deploy at all. Always wear your seat belts even though you have air bags.

☐ Do not drill, cut, or tamper with the knee impact bolsters in any way.

☐ Do not mount any accessories to the knee impact bolsters such as alarm lights, stereos, citizen band radios, etc.

WARNING! (Continued)

Door sill trim cover and the lower passenger side of the instrument panel separate and fold out of the way as the air bags inflate to their full size. The front air bags fully inflate in less time than it takes to blink your eyes. The front air bags then quickly deflate while helping to restrain the driver and front passenger.

Knee Impact Bolsters

The Knee Impact Bolsters help protect the knees of the driver and front passenger, and position the front occupants for improved interaction with the front air bags.

Supplemental Driver And Front Passenger Knee Air Bags

This vehicle is equipped with a Supplemental Driver Knee Air Bag mounted in the instrument panel below the steering column and a Supplemental Passenger Knee Air Bag mounted in the instrument panel below the glove compartment. The Supplemental Knee Air Bags provide enhanced protection during a frontal impact by working together with the seat belts, pretensioners, and front air bags.

WARNING!

☐ Relying on the air bags alone could lead to more severe injuries in a collision. The air bags work with your seat belt to restrain you properly. In some collisions, air bags won’t deploy at all. Always wear your seat belts even though you have air bags.

☐ Do not drill, cut, or tamper with the knee impact bolsters in any way.

☐ Do not mount any accessories to the knee impact bolsters such as alarm lights, stereos, citizen band radios, etc.

WARNING! (Continued)
Supplemental Side Air Bags

Supplemental Seat-Mounted Side Air Bags (SABs)

This vehicle is equipped with Supplemental Seat-Mounted Side Air Bags (SABs).

Supplemental Seat-Mounted Side Air Bags (SABs) are located in the outboard side of the front seats. The SABs are marked with a “SRS AIRBAG” or “AIRBAG” on a label or on the seat trim on the outboard side of the seats.

The SABs may help to reduce the risk of occupant injury during certain side impacts, in addition to the injury reduction potential provided by the seat belts and body structure.

Supplemental Side Air Bag Inflatable Curtains (SABICs)

This vehicle is equipped with Supplemental Side Air Bag Inflatable Curtains (SABICs).

Supplemental Side Air Bag Inflatable Curtains (SABICs) are located above the side windows. The trim covering the SABICs is labeled “SRS AIRBAG” or “AIRBAG.”

Supplemental Side Air Bag Inflatable Curtain (SABIC) Location

SABICs may help reduce the risk of head and other injuries to front and rear seat outboard occupants in certain side impacts, in addition to the injury reduction potential provided by the seat belts and body structure.

WARNING!

Do not use accessory seat covers or place objects between you and the Side Air Bags; the performance could be adversely affected and/or objects could be pushed into you, causing serious injury.
The SABIC deploys downward, covering the side windows. An inflating SABIC pushes the outside edge of the headliner out of the way and covers the window. The SABICs inflate with enough force to injure occupants if they are not belted and seated properly, or if items are positioned in the area where the SABICs inflate. Children are at an even greater risk of injury from a deploying air bag.

The SABICs may help reduce the risk of partial or complete ejection of vehicle occupants through side windows in certain side impact events.

### WARNING!

- Do not mount equipment, or stack luggage or other cargo up high enough to block the deployment of the SABICs. The trim covering above the side windows where the SABIC and its deployment path are located should remain free from any obstructions.
- In order for the SABICs to work as intended, do not install any accessory items in your vehicle which could alter the roof. Do not add an aftermarket sunroof to your vehicle. Do not add roof racks that require permanent attachments (bolts or screws) for installation on the vehicle roof. Do not drill into the roof of the vehicle for any reason.

### Side Impacts

The Side Air Bags are designed to activate in certain side impacts. The Occupant Restraint Controller (ORC) determines whether the deployment of the Side Air Bags in a particular impact event is appropriate, based on the severity and type of collision. The side impact sensors aid the ORC in determining the appropriate response to impact events. The system is calibrated to deploy the Side Air Bags on the impact side of the vehicle during impacts that require Side Air Bag occupant protection. In side impacts, the Side Air Bags deploy independently; a left side impact deploys the left Side Air Bags only and a right-side impact deploys the right Side Air Bags only. Vehicle damage by itself is not a good indicator of whether or not Side Air Bags should have deployed.

The Side Air Bags will not deploy in all side collisions, including some collisions at certain angles, or some side collisions that do not impact the area of the passenger compartment. The Side Air Bags may deploy during angled or offset frontal collisions where the front air bags deploy.

Side Air Bags are a supplement to the seat belt restraint system. Side Air Bags deploy in less time than it takes to blink your eyes.

### WARNING!

- Occupants, including children, who are up against or very close to Side Air Bags can be seriously injured or killed. Occupants, including children, should never lean on or sleep against the door, side windows, or area where the side air bags inflate, even if they are in an infant or child restraint.
- Seat belts (and child restraints where appropriate) are necessary for your protection in all collisions. They also help keep you in position, away from an inflating Side Air Bag. To get the best protection from the Side Air Bags, occupants must wear their seat belts properly and sit upright with their backs against the seats. Children must be properly restrained in a child restraint or booster seat that is appropriate for the size of the child.

### WARNING!

- Side Air Bags need room to inflate. Do not lean against the door or window. Sit upright in the center of the seat.
- Being too close to the Side Air Bags during deployment could cause you to be severely injured or killed.
NOTE:
Air bag covers may not be obvious in the interior trim, but they will open during air bag deployment.

**Rollover Events**

Side Air Bags are designed to activate in certain rollover events. The ORC determines whether the deployment of the Side Air Bags in a particular rollover event is appropriate, based on the severity and type of collision. Vehicle damage by itself is not a good indicator of whether or not Side Air Bags should have deployed.

The Side Air Bags will not deploy in all rollover events. The rollover sensing system determines if a rollover event may be in progress and whether deployment is appropriate. In the event the vehicle experiences a rollover or near rollover event, and deployment of the Side Air Bags is appropriate, the rollover sensing system will also deploy the seat belt pretensioners on both sides of the vehicle.

The SABICs may help reduce the risk of partial or complete ejection of vehicle occupants through side windows in certain rollover or side impact events.

**Air Bag System Components**

**NOTE:**
The Occupant Restraint Controller (ORC) monitors the internal circuits and interconnecting wiring associated with electrical Air Bag System Components listed below:
- Occupant Restraint Controller (ORC)
- Air Bag Warning Light
- Steering Wheel and Column
- Instrument Panel
- Knee Impact Bolsters
- Driver and Front Passenger Air Bags
- Seat Belt Buckle Switch
- Supplemental Side Air Bags
- Supplemental Knee Air Bags
- Front and Side Impact Sensors
- Seat Belt Pretensioners
- Seat Track Position Sensors

**If A Deployment Occurs**
The front air bags are designed to deflate immediately after deployment.

**NOTE:**
Front and/or side air bags will not deploy in all collisions. This does not mean something is wrong with the air bag system.

If you do have a collision which deploys the air bags, any or all of the following may occur:
- Relying on the Side Air Bags alone could lead to more severe injuries in a collision. The Side Air Bags work with your seat belt to restrain you properly. In some collisions, Side Air Bags won’t deploy at all. Always wear your seat belt even though you have Side Air Bags.
- The air bag material may sometimes cause abrasions and/or skin reddening to the occupants as the air bags deploy and unfold. The abrasions are similar to friction rope burns or those you might get sliding along a carpet or gymnasium floor. They are not caused by contact with chemicals. They are not permanent and normally heal quickly. However, if you haven’t healed significantly within a few days, or if you have any blistering, see your doctor immediately.
- As the air bags deflate, you may see some smoke-like particles. The particles are a normal by-product of the process that generates the non-toxic gas used for air bag inflation. These airborne particles may irritate the skin, eyes, nose, or throat. If you have skin or eye irritation, rinse the area with cool water. For nose or throat irritation, move to fresh air. If the irritation continues, see your doctor. If these particles settle on your clothing, follow the garment manufacturer’s instructions for cleaning.
SAFETY

Do not drive your vehicle after the air bags have deployed. If you are involved in another collision, the air bags will not be in place to protect you.

Note:
- Air bag covers may not be obvious in the interior trim, but they will open during air bag deployment.
- After any collision, the vehicle should be taken to an authorized dealer immediately.

Enhanced Accident Response System

In the event of an impact, if the communication network remains intact, and the power remains intact, depending on the nature of the event, the ORC will determine whether to have the Enhanced Accident Response System perform the following functions:
- Cut off fuel to the engine (If Equipped)
- Cut off battery power to the electric motor (If Equipped)
- Flash hazard lights as long as the battery has power
- Turn on the interior lights, which remain on as long as the battery has power or for 15 minutes from the intervention of the Enhanced Accident Response System.
- Unlock the power door locks.

Your vehicle may also be designed to perform any of these other functions in response to the Enhanced Accident Response System:
- Turn off the Fuel Filter Heater
- Turn off the HVAC Blower Motor
- Close the HVAC Circulation Door
- Cut off battery power to the:
  - Engine
  - Electric Motor (if equipped)
  - Electric power steering
  - Brake booster
  - Electric park brake
  - Automatic transmission gear selector
  - Horn
  - Front wiper
  - Headlamp washer pump

Note:
After an accident, remember to cycle the ignition to the STOP (OFF/LOCK) position and remove the key from the ignition switch to avoid draining the battery. Carefully check the vehicle for fuel leaks in the engine compartment and on the ground near the engine compartment and fuel tank before resetting the system and starting the engine. If there are no fuel leaks or damage to the vehicle electrical devices (e.g. headlights) after an accident, reset the system by following the procedure described below. If you have any doubt, contact an authorized dealer.

Enhanced Accident Response System Reset Procedure

After the event occurs, when the system is active, a message regarding fuel cutoff is displayed. Turn the ignition switch from ignition AVV/START or MAR/ACC/ON/RUN to ignition STOP/OFF/LOCK. Carefully check the vehicle for fuel leaks in the engine compartment and on the ground near the engine compartment and fuel tank before resetting the system and starting the engine.

Depending on the nature of the event the left and right turn signal lights, located in the instrument panel, may both be blinking and will continue to blink. In order to move your vehicle to the side of the road, you must follow the system reset procedure.
If a reset procedure step is not completed within 60 seconds, then the turn signal lights will blink and the reset procedure must be performed again in order to be successful.

SAFETY

Maintaining Your Air Bag System

WARNING!

- Modifications to any part of the air bag system could cause it to fail when you need it. You could be injured if the air bag system is not there to protect you. Do not modify the components or wiring, including adding any kind of badges or stickers to the steering wheel hub trim cover or the upper passenger side of the instrument panel. Do not modify the front bumper, vehicle body structure, or add aftermarket side steps or running boards.

- It is dangerous to try to repair any part of the air bag system yourself. Be sure to tell anyone who works on your vehicle that it has an air bag system.

WARNING! (Continued)

- Do not attempt to modify any part of your air bag system. The air bag may inflate accidentally or may not function properly if modifications are made. Take your vehicle to an authorized dealer for any air bag system service. If your seat, including your trim cover and cushion, needs to be serviced in any way (including removal or loosening/tightening of seat attachment bolts), take the vehicle to an authorized dealer. Only manufacturer approved seat accessories may be used. If it is necessary to modify the air bag system for persons with disabilities, contact an authorized dealer.

Event Data Recorder (EDR)

This vehicle is equipped with an Event Data Recorder (EDR). The main purpose of an EDR is to record, in certain crash or near crash-like situations, such as an air bag deployment or hitting a road obstacle, data that will assist in understanding how a vehicle’s systems performed. The EDR is designed to record data related to vehicle dynamics and safety systems for a short period of time, typically 30 seconds or less.

The EDR in this vehicle is designed to record such data as:

- How various systems in your vehicle were operating;
- Whether or not the driver and passenger safety belts were buckled/fastened;
- How far (if at all) the driver was depressing the accelerator and/or brake pedal; and,
- How fast the vehicle was traveling.

These data can help provide a better understanding of the circumstances in which crashes and injuries occur.

NOTE:

EDR data are recorded by your vehicle only if a non-trivial crash situation occurs; no data are recorded by the EDR under normal driving conditions and no personal data (e.g., name, gender, age, and crash location) are recorded. However, other parties, such as law enforcement, could combine the EDR data with the type of personally identifying data routinely acquired during a crash investigation.

To read data recorded by an EDR, special equipment is required, and access to the vehicle or the EDR is needed. In addition to the vehicle manufacturer, other parties, such as law enforcement, that have the special equipment, can read the information if they have access to the vehicle or the EDR.
Child Restraints

Everyone in your vehicle needs to be buckled up at all times, including babies and children. Every state in the United States, and every Canadian province, requires that small children ride in proper restraint systems. This is the law, and you can be prosecuted for ignoring it.

Children 12 years or younger should ride properly buckled up in a rear seat, if available. According to crash statistics, children are safer when properly restrained in the rear seats rather than in the front.

There are different sizes and types of restraints for children from newborn size to the child almost large enough for an adult safety belt. Always check the child seat Owner’s Manual to make sure you have the correct seat for your child. Carefully read and follow all the instructions and warnings in the child restraint Owner’s Manual and on all the labels attached to the child restraint.

Before buying any restraint system, make sure that it has a label certifying that it meets all applicable Safety Standards. You should also make sure that you can install it in the vehicle where you will use it.

WARNING!

In a collision, an unrestrained child can become a projectile inside the vehicle. The force required to hold even an infant on your lap could become so great that you could not hold the child, no matter how strong you are. The child and others could be badly injured or killed. Any child riding in your vehicle should be in a proper restraint for the child’s size.

NOTE:

- For additional information, refer to http://www.nhtsa.gov/parents-and-caregivers or call: 1–888–327–4236
- Canadian residents should refer to Transport Canada’s website for additional information: http://www.tc.gc.ca/eng/motorvehiclesafety/safedrivers-child-safety-index-53.htm

Infant And Child Restraints

Safety experts recommend that children ride rear-facing in the vehicle until they are two years old or until they reach either the height or weight limit of their rear-facing child restraint. Two types of child restraints can be used rear-facing: infant carriers and convertible child seats.

The infant carrier is only used rear-facing in the vehicle. It is recommended for children from birth until they reach the weight or height limit of the infant carrier. Convertible child seats can be used either rear-facing or forward-facing in the vehicle. Convertible child seats often have a higher weight limit in the rear-facing direction than infant carriers do, so they can be used rear-facing by children who have outgrown their infant carrier but are still less than at least two years old. Children should remain rear-facing until they reach the highest weight or height allowed by their convertible child seat.

**WARNING!**

- Never place a rear-facing child restraint in front of an air bag. A deploying passenger front air bag can cause death or serious injury to a child 12 years or younger, including a child in a rear-facing child restraint.

Older Children And Child Restraints

Children who are two years old or who have outgrown their rear-facing convertible child seat can ride forward-facing in the vehicle. Forward-facing child seats and convertible child seats used in the forward-facing direction are for children who are over two years old or who have outgrown the rear-facing
weight or height limit of their rear-facing convertible child seat. Children should remain in a forward-facing child seat with a harness for as long as possible, up to the highest weight or height allowed by the child seat.

All children whose weight or height is above the forward-facing limit for the child seat should use a belt-positioning booster seat until the vehicle’s seat belts fit properly. If the child cannot sit with knees bent over the vehicle’s seat cushion while the child’s back is against the seatback, they should use a belt-positioning booster seat. The child and belt-positioning booster seat are held in the vehicle by the seat belt.

Children Too Large For Booster Seats

Children who are large enough to wear the shoulder belt comfortably, and whose legs are long enough to bend over the front of the seat when their back is against the seatback, should use the seat belt in a rear seat. Use this simple 5-step test to decide whether the child can use the vehicle’s seat belt alone:

1. Can the child sit all the way back against the back of the vehicle seat?
2. Do the child’s knees bend comfortably over the front of the vehicle seat – while the child is still sitting all the way back?
3. Does the shoulder belt cross the child’s shoulder between the neck and arm?
4. Is the lap part of the belt as low as possible, touching the child’s thighs and not the stomach?
5. Can the child stay seated like this for the whole trip?

If the answer to any of these questions was “no,” then the child still needs to use a booster seat in this vehicle. If the child is using the lap/shoulder belt, check seat belt fit periodically and make sure the seat belt buckle is latched. A child’s squirming or slouching can move the belt out of position. If the shoulder belt contacts the face or neck, move the child closer to the center of the vehicle, or use a booster seat to position the seat belt on the child correctly.

**WARNING!**

- Improper installation can lead to failure of an infant or child restraint. It could come loose in a collision. The child could be badly injured or killed. Follow the child restraint manufacturer’s directions exactly when installing an infant or child restraint.
- After a child restraint is installed in the vehicle, do not move the vehicle seat forward or rearward because it can loosen the child restraint attachments. Remove the child restraint before adjusting the vehicle seat position. When the vehicle seat has been adjusted, reinstall the child restraint.

If the answer to any of these questions was “no,” then the child still needs to use a booster seat in this vehicle. If the child is using the lap/shoulder belt, check seat belt fit periodically and make sure the seat belt buckle is latched. A child’s squirming or slouching can move the belt out of position. If the shoulder belt contacts the face or neck, move the child closer to the center of the vehicle, or use a booster seat to position the seat belt on the child correctly.

**WARNING!**

- Never allow a child to put the shoulder belt under an arm or behind their back. In a crash, the shoulder belt will not protect a child properly, which may result in serious injury or death. A child must always wear both the lap and shoulder portions of the seat belt correctly.
### Recommendations For Attaching Child Restraints

Your vehicle is equipped with the child restraint anchorage system called LATCH, which stands for Lower Anchors and Tethers for CHildren. The LATCH system has three vehicle anchor points for installing LATCH-equipped child seats. There are two lower anchorages located at the back of the seat cushion where it meets the seatback and one top tether anchorage located behind the seating position. These anchorages are used to install LATCH-equipped child seats without using the vehicle’s seat belts. Some seating positions may have a top tether anchorage but no lower anchorages. In these seating positions, the seat belt must be used with the top tether anchorage to install the child restraint. Please see the following table for more information.

### LATCH Positions For Installing Child Restraints In This Vehicle

### Frequently Asked Questions About Installing Child Restraints With LATCH

<table>
<thead>
<tr>
<th>Question</th>
<th>Answer</th>
</tr>
</thead>
<tbody>
<tr>
<td>What is the weight limit (child’s weight + weight of the child restraint) for using the LATCH anchorage system to attach the child restraint?</td>
<td>65 lbs (29.5 kg) Use the LATCH anchorage system until the combined weight of the child and the child restraint is 65 lbs (29.5 kg). Use the seat belt and tether anchor instead of the LATCH system once the combined weight is more than 65 lbs (29.5 kg).</td>
</tr>
<tr>
<td>Can the LATCH anchorages and the seat belt be used together to attach a rear-facing or forward-facing child restraint?</td>
<td>No Do not use the seat belt when you use the LATCH anchorage system to attach a rear-facing or forward-facing child restraint. Booster seats may be attached to the LATCH anchorages if allowed by the booster seat manufacturer. See your booster seat owner’s manual for more information.</td>
</tr>
<tr>
<td>Can a child seat be installed in the center position using the inner LATCH lower anchorage?</td>
<td>No Use the seat belt and tether anchor to install a child seat in the center seating position.</td>
</tr>
<tr>
<td>Can two child restraints be attached using a common lower LATCH anchorage?</td>
<td>No Never “share” a LATCH anchorage with two or more child restraints. If the center position does not have dedicated LATCH lower anchorages, use the seat belt to install a child seat in the center position next to a child seat using the LATCH anchorages in an outboard position.</td>
</tr>
<tr>
<td>Can the rear-facing child restraint touch the back of the front passenger seat?</td>
<td>Yes The child seat may touch the back of the front passenger seat if the child restraint manufacturer also allows contact. See your child restraint owner's manual for more information.</td>
</tr>
<tr>
<td>Can the rear head restraints be removed?</td>
<td>Yes The head restraints can be removed in every seating position if they interfere with the installation of the child restraint. Refer to “Head Restraints” in “Getting To Know Your Vehicle” for further information.</td>
</tr>
</tbody>
</table>
SAFETY

Locating The LATCH Anchorages

The lower anchorages are round bars that are found at the rear of the seat cushion where it meets the seatback. Each anchorage is under a cover with the anchorage symbol on it. Lift the cover to access the lower anchorage.

LATCH Anchorage Locations

1 — LATCH Anchorage Bar
2 — LATCH Anchorage Locations

Locating The Upper Tether Anchorages

There are tether strap anchorages behind each rear seating position located in the panel between the rear seatback and the rear window. They are found under a plastic cover with the tether anchorage symbol on it.

Upper Tether Anchorage Location

LATCH-compatible child restraint systems will be equipped with a rigid bar or a flexible strap on each side. Each will have a hook or connector to attach to the lower anchorage and a way to tighten the connection to the anchorage. Forward-facing child restraints and some rear-facing child restraints will also be equipped with a tether strap. The tether strap will have a hook at the end to attach to the top tether anchorage and a way to tighten the strap after it is attached to the anchorage.

Center Seat LATCH

WARNING!

- Do not install a child restraint in the center position using the LATCH system. This position is not approved for installing child seats using the LATCH attachments. You must use the seat belt and tether anchor to install a child seat in the center seating position.
- Never use the same lower anchorage to attach more than one child restraint. Please refer to “Installing The LATCH-Compatible Child Restraint System” for typical installation instructions.

Always follow the directions of the child restraint manufacturer when installing your child restraint. Not all child restraint systems will be installed as described here.

To Install A LATCH-Compatible Child Restraint

If the selected seating position has a Switchable Automatic Locking Retractor (ALR) seat belt, stow the seat belt, following the instructions below. See the section “Installing Child Restraints Using the Vehicle Seat Belt” to check what type of seat belt each seating position has.

1. Loosen the adjusters on the lower straps and on the tether strap of the child seat
so that you can more easily attach the hooks or connectors to the vehicle anchorages.

2. Place the child seat between the lower anchorages for that seating position. For some second row seats, you may need to recline the seat and / or raise the head restraint (if adjustable) to get a better fit. If the rear seat can be moved forward and rearward in the vehicle, you may wish to move it to its rear-most position to make room for the child seat. You may also move the front seat forward to allow more room for the child seat.

3. Attach the lower hooks or connectors of the child restraint to the lower anchorages in the selected seating position.

4. If the child restraint has a tether strap, connect it to the top tether anchorage. See the section “Installing Child Restraints Using the Top Tether Anchorage” for directions to attach a tether anchor.

5. Tighten all of the straps as you push the child restraint rearward and downward into the seat. Remove slack in the straps according to the child restraint manufacturer’s instructions.

6. Test that the child restraint is installed tightly by pulling back and forth on the child seat at the belt path. It should not move more than 1 inch (25.4 mm) in any direction.

How To Stow An Unused Switchable-ALR (ALR) Seat Belt:

When using the LATCH attaching system to install a child restraint, stow all ALR seat belts that are not being used by other occupants or being used to secure child restraints. An unused belt could injure a child if they play with it and accidentally lock the seat belt retractor. Before installing a child restraint using the LATCH system, buckle the seat belt behind the child restraint and out of the child’s reach. If the buckled seat belt interferes with the child restraint installation, instead of buckling it behind the child restraint, route the seat belt through the child restraint belt path and then buckle it. Do not lock the seat belt. Remind all children in the vehicle that the seat belts are not toys and that they should not play with them.

WARNING!

- Improper installation of a child restraint to the LATCH anchorages can lead to failure of the restraint. The child could be badly injured or killed. Follow the child restraint manufacturer’s directions exactly when installing an infant or child restraint.

Installing Child Restraints Using The Vehicle Seat Belt

Child restraint systems are designed to be secured in vehicle seats by lap belts or the lap belt portion of a lap/shoulder belt.

WARNING!

- Improper installation or failure to properly secure a child restraint can lead to failure of the restraint. The child could be badly injured or killed.

- Follow the child restraint manufacturer’s directions exactly when installing an infant or child restraint.

The seat belts in the passenger seating positions are equipped with a Switchable Automatic Locking Retractor (ALR) that is designed to keep the lap portion of the seat belt tight around the child restraint so that it is not necessary to use a locking clip. The ALR retractor can be “switched” into a locked mode by pulling all of the webbing...
out of the retractor and then letting the webbing retract back into the retractor. If it is locked, the ALR will make a clicking noise while the webbing is pulled back into the retractor.

Refer to the “Automatic Locking Mode” description in “Switchable Automatic Locking Retractors (ALR)” under “Occupant Restraint Systems” for additional information on ALR.

Please see the table below and the following sections for more information.

### Lap/Shoulder Belt Systems For Installing Child Restraints In This Vehicle

| ALR = Switchable Automatic Locking Retractor |
| Top Tether Anchorage Symbol |

<table>

</tr>
</tbody>
</table>
Installing A Child Restraint With A Switchable Automatic Locking Retractor (ALR):

Child restraint systems are designed to be secured in vehicle seats by lap belts or the lap belt portion of a lap/shoulder belt.

1. Place the child seat in the center of the seating position. For some second row seats, you may need to recline the seat and/or raise the head restraint (if adjustable) to get a better fit. If the rear seat can be moved forward and rearward in the vehicle, you may wish to move it to its rear-most position to make room for the child seat. You may also move the front seat forward to allow more room for the child seat.

2. Pull enough of the seat belt webbing from the retractor to pass it through the belt path of the child restraint. Do not twist the belt webbing in the belt path.

3. Slide the latch plate into the buckle until you hear a “click.”

4. Pull on the webbing to make the lap portion tight against the child seat.

5. To lock the seat belt, pull down on the shoulder part of the belt until you have pulled all the seat belt webbing out of the retractor. Then, allow the webbing to retract back into the retractor. As the webbing retracts, you will hear a clicking sound. This means the seat belt is now in the Automatic Locking mode.

6. Try to pull the webbing out of the retractor. If it is locked, you should not be able to pull out any webbing. If the retractor is not locked, repeat step 5.

7. Finally, pull up on any excess webbing to tighten the lap portion around the child restraint while you push the child restraint rearward and downward into the vehicle seat.

8. If the child restraint has a top tether strap and the seating position has a top tether anchorage, connect the tether strap to the anchorage and tighten the tether strap. See the section “Installing Child Restraints Using the Top Tether Anchorage” for directions to attach a tether anchor.

9. Test that the child restraint is installed tightly by pulling back and forth on the child seat at the belt path. It should not move more than 1 inch (25.4 mm) in any direction.

Any seat belt system will loosen with time, so check the belt occasionally, and pull it tight if necessary.

Installing Child Restraints Using The Top Tether Anchorage:

1. Look behind the seating position where you plan to install the child restraint to find the tether anchorage. You may need to move the seat forward to provide better access to the tether anchorage. If there is no top tether anchorage for that seating position, move the child restraint to another position in the vehicle if one is available.
SAFETY

2. Rotate or lift the cover to access the anchor directly behind the seat where you are placing the child restraint.

3. Route the tether strap to provide the most direct path for the strap between the anchor and the child seat. If your vehicle is equipped with adjustable rear head restraints, raise the head restraint, and where possible, route the tether strap under the head restraint and between the two posts. If not possible, lower the head restraint and pass the tether strap around the outboard side of the head restraint.

4. Attach the tether strap hook of the child restraint to the top tether anchorage as shown in the diagram.

5. Remove slack in the tether strap according to the child restraint manufacturer’s instructions.

SAFETY TIPS

Transporting Passengers

NEVER TRANSPORT PASSENGERS IN THE CARGO AREA.

WARNING!

☐ An incorrectly anchored tether strap could lead to increased head motion and possible injury to the child. Use only the anchorage position directly behind the child seat to secure a child restraint top tether strap.

☐ If your vehicle is equipped with a split rear seat, make sure the tether strap does not slip into the opening between the seatbacks as you remove slack in the strap.

Transporting Pets

Air Bags deploying in the front seat could harm your pet. An unrestrained pet will be thrown about and possibly injured, or injure a passenger during panic braking or in a collision.

Pets should be restrained in the rear seat (if equipped) in pet harnesses or pet carriers that are secured by seat belts.

ExhaustGas

WARNING!

☐ Exhaust gases can injure or kill. They contain carbon monoxide (CO), which is colorless and odorless. Breathing it can make you unconscious and can eventually poison you. To avoid breathing (CO), follow these safety tips:
The best protection against carbon monoxide entry into the vehicle body is a properly maintained engine exhaust system.

Whenever a change is noticed in the sound of the exhaust system, when exhaust fumes can be detected inside the vehicle, or when the underside or rear of the vehicle is damaged, have a competent mechanic inspect the complete exhaust system and adjacent body areas for broken, damaged, deteriorated, or mispositioned parts. Open seams or loose connections could permit exhaust fumes to seep into the passenger compartment. In addition, inspect the exhaust system each time the vehicle is raised for lubrication or oil change. Replace as required.

Safety Checks You Should Make Inside The Vehicle

Seat Belts
Inspect the seat belt system periodically, checking for cuts, frays, and loose parts. Damaged parts must be replaced immediately. Do not disassemble or modify the system.

Front seat belt assemblies must be replaced after a collision. Rear seat belt assemblies must be replaced after a collision if they have been damaged (i.e., bent retractor, torn webbing, etc.). If there is any question regarding seat belt or retractor condition, replace the seat belt.

Air Bag Warning Light
The Air Bag warning light will turn on for four to eight seconds as a bulb check when the ignition switch is first turned to ON/RUN. If the light is either not on during starting, stays on, or turns on while driving, have the system inspected at an authorized dealer as soon as possible. After the bulb check, this light will illuminate with a single chime when a fault with the Air Bag System has been detected. It will stay on until the fault is removed. If the light comes on intermittently or remains on while driving, have an authorized dealer service the vehicle immediately.

Refer to “Occupant Restraint Systems” in “Safety” for further information.

Defroster
Check operation by selecting the defrost mode and place the blower control on high speed. You should be able to feel the air directed against the windshield. See an authorized dealer for service if your defroster is inoperable.

Floor Mat Safety Information
Always use floor mats designed to fit your vehicle. Only use a floor mat that does not interfere with the operation of the accelerator, brake or clutch pedals. Only use a floor mat that is securely attached using the floor mat fasteners so it cannot slip out of position and interfere with the accelerator, brake or clutch pedals or impair safe operation of your vehicle in other ways.

WARNING!

An improperly attached, damaged, folded, or stacked floor mat, or damaged floor mat fasteners may cause your floor mat to interfere with the accelerator, brake, or clutch pedals and cause a loss of vehicle control. To prevent SERIOUS INJURY or DEATH:

(Continued)
Periodic Safety Checks You Should Make Outside The Vehicle

Tires
Examine tires for excessive tread wear and uneven wear patterns. Check for stones, nails, glass, or other objects lodged in the tread or sidewall. Inspect the tread for cuts and cracks. Inspect sidewalls for cuts, cracks, and bulges. Check the wheel nuts for tightness. Check the tires (including spare) for proper cold inflation pressure.

Lights
Have someone observe the operation of brake lights and exterior lights while you work the controls. Check turn signal and high beam indicator lights on the instrument panel.

Door Latches
Check for proper closing, latching, and locking.

Fluid Leaks
Check area under the vehicle after overnight parking for fuel, coolant, oil, or other fluid leaks. Also, if gasoline fumes are detected or if fuel, or brake fluid leaks are suspected. The cause should be located and corrected immediately.

WARNING! (Continued)

☐ ALWAYS securely attach your floor mat using the floor mat fasteners. DO NOT install your floor mat upside down or turn your floor mat over. Lightly pull to confirm mat is secured using the floor mat fasteners on a regular basis.

☐ ALWAYS REMOVE THE EXISTING FLOOR MAT FROM THE VEHICLE before installing any other floor mat. NEVER install or stack an additional floor mat on top of an existing floor mat.

☐ ONLY install floor mats designed to fit your vehicle. NEVER install a floor mat that cannot be properly attached and secured to your vehicle. If a floor mat needs to be replaced, only use a FCA approved floor mat for the specific make, model, and year of your vehicle.

☐ ONLY use the driver’s side floor mat on the driver’s side floor area. To check for interference, with the vehicle properly parked with the engine off, fully depress the accelerator, the brake, and the clutch pedal (if present) to check for interference. If your floor mat interferes with the operation of any pedal, or is not secure to the floor, remove the floor mat from the vehicle and place the floor mat in your trunk.

☐ ONLY use the passenger’s side floor mat on the passenger’s side floor area.
Let’s get to the core of the vehicle, and see how you can explore its fullest potential. We’ll look at how to drive safely in any situation, making it a welcome companion with our comfort and wallets in mind.

**STARTING THE ENGINE**

Before starting the engine, be sure to adjust the seat, the interior rear view mirrors, and the door mirrors, and fasten the seat belt correctly.

Never press the accelerator pedal before starting the engine.

If necessary, messages indicating the starting procedure can be shown in the display.

### WARNING!

- When leaving the vehicle, always remove the key fob from the vehicle and lock your vehicle.
- Never leave children alone in a vehicle, or with access to an unlocked vehicle.
- Allowing children to be in a vehicle unattended is dangerous for a number of reasons. A child or others could be seriously or fatally injured. Children should be warned not to touch the parking brake, brake pedal or the transmission gear selector.

### Starting Procedure

Proceed as follows:

1. Apply the electric park brake and set the gear selector to PARK (P) or NEUTRAL (N).
2. Fully depress the brake pedal without touching the accelerator.
3. Briefly push the ignition button.
4. If the engine doesn’t start within a few seconds, you need to repeat the procedure.

If the problem persists, contact an authorized dealer.

### WARNING! (Continued)

- Do not leave the key fob in or near the vehicle, or in a location accessible to children. A child could operate power windows, other controls, or move the vehicle.
- Do not leave children or animals inside parked vehicles in hot weather. Interior heat build-up may cause serious injury or death.

### WARNING!

- Never pour fuel or other flammable liquid into the throttle body air inlet opening in an attempt to start the vehicle. This could result in flash fire causing serious personal injury.
- Do not attempt to push or tow your vehicle to get it started. Vehicles equipped with an automatic transmission cannot be started this way. Unburned fuel could enter the catalytic converter and once the engine has started, ignite and damage the converter and vehicle.
- If the vehicle has a discharged battery, booster cables may be used to obtain a start from a booster battery or the battery in another vehicle. This type of start can be dangerous if done improperly. Refer to “Jump Starting” in “In Case Of Emergency” for further information.

### CAUTION!

To prevent damage to the starter, do not continuously crank the engine for more than 25 seconds at a time. Wait 60 seconds before trying again.
If Engine Fails To Start
Starting The Engine With Key Fob Battery Run Down Or Drained
If the ignition does not respond when the button is pushed the key fob battery might be run down or drained. Therefore, the system does not detect the presence of the key fob in the vehicle and displays a dedicated message.

Stopping The Engine
To stop the engine, proceed as follows:
1. Park the vehicle in a position that is not dangerous for oncoming traffic.
2. Engage the PARK (P) mode.
3. With engine idling, press the START/STOP button on the steering wheel to STOP the engine.

NOTE:
Do not leave the ignition in ON mode when the engine is off.

To shut off the engine with vehicle speed greater than 5 mph (8 km/h), you must push and hold the ignition or push the START/STOP button three times consecutively within a few seconds. The engine will shut down, and the ignition will be placed in the ON mode.

ENGINE BREAK-IN RECOMMENDATIONS

2.0L GME T4 Engine Break-In
For vehicles equipped with the 2.0L GME T4, use the following engine break-in recommendations:

Despite modern technology and World Class Manufacturing methods, the moving parts of the engine must still wear in with each other. This wearing in occurs mainly during the first 500 miles (805 km) and continues through the first oil change interval.

NOTE:
A new engine may consume some oil during its first few thousand miles (kilometers) of operation. This should be considered a normal part of the break-in period and not interpreted as an indication of a problem. Please monitor your oil level during the break-in period and add oil as required.

It is recommended for the operator to observe the following driving behaviors during the new vehicle break-in period:

0 to 100 miles (0 to 160 km):
- Do not allow the engine to operate at idle for an extended period of time.
- Press the accelerator pedal slowly and not more than halfway to avoid rapid acceleration.

Avoid aggressive braking.
Drive with the engine speed less than 3500 RPM.
Maintain vehicle speed below 55 mph (88 km) and observe local speed limits.

100 to 300 miles (160 to 483 km):
- Press the accelerator pedal slowly and not more than halfway to avoid rapid acceleration in lower gears (1st to 3rd gears).
- Avoid aggressive braking.
- Drive with the engine speed less than 5000 RPM.

Maintain vehicle speed below 70 mph (112 km/h) and observe local speed limits.

300 to 500 miles (483 to 805 km):
- Exercise the full engine rpm range, shifting manually (paddles or gear shift) at higher rpm’s when possible.
- Do not perform sustained operation with the accelerator pedal at wide open throttle.
- Maintain vehicle speed below 85 mph (136 km/h) and observe local speed limits.
For the first 1500 miles (2414 km):
- Do not participate in track events, sport driving schools, or similar activities during the first 1500 miles (2414 km).

**NOTE:**
Monitor engine oil with every refueling and add if necessary. Oil and fuel consumption may be higher through the first oil change interval.

**ELECTRIC PARK BRAKE**

The vehicle is equipped with electric park brake to guarantee better use and optimal performance compared to a manually operated park brake.

The electric parking brake features a switch located on the center console, a caliper with motor for each rear wheel, and an electronic control module.

The electric parking brake can be engaged in two ways:
- Manually, by pulling the switch on the center console.
- Automatically, in "Safe Hold" or "Auto Park Brake" conditions.

**NOTE:**
Normally, the electric parking brake is engaged automatically when the engine is stopped. This function can be deactivated/activated on the Information and Entertainment system by selecting the following items in sequence on the main menu: "Settings", "Driver Assistance" and "Automatic Parking Brake".

In addition to engaging the electric park brake, along with steering and positioning chocks in front of the wheels (when on a steep slope), you must always place the vehicle in the PARK (P) mode before leaving.

Should the vehicle battery be faulty, the battery must be replaced in order to unlock the electric park brake.

**Engaging The Park Brake Manually**

Briefly pull the switch located on the center console to manually engage the electric park brake when the vehicle is stationary.

Noise may be heard from the rear of the vehicle when engaging the electric parking brake.

A slight movement of the brake pedal may be detected when engaging the electric parking brake with the brake pedal pressed.

With the electric parking brake engaged, the BRAKE warning light on the instrument panel and the switch will illuminate.

**CAUTION!**

With the Electronic Parking Brake failure warning light on, some functions of the electric parking brake are deactivated. In this case the driver is responsible for brake activation and vehicle parking in complete safety conditions.

If, under exceptional circumstances, the use of the brake is required with the vehicle in motion, keep the switch on the center console pulled as long as the brake action is necessary.

The BRAKE warning light may turn on with the hydraulic system temporarily unavailable, in this case braking is controlled by the motors.

The brake lights will also automatically turn on in the same way as for normal braking with the use of the brake pedal.

Release the switch on the center console to stop the braking action with the vehicle in motion.
If, through this procedure, the vehicle is braked until a speed below 1.9 mph (3 km/h) is reached and the switch is kept pulled, the park brake will definitively engage.

**NOTE:**
Driving the vehicle with the electric parking brake engaged, or using it several times to slow down the vehicle, may cause severe damage to the braking system.

**Disengaging The Electric Park Brake Manually**

In order to manually release the park brake, the ignition should be in the ON mode. Press the brake pedal, and then push the switch on the center console briefly.

Noise may be heard from the rear of the vehicle, and a slight movement of the brake pedal may be detected during disengagement.

After disengaging the electric parking brake, the BRAKE warning light on the instrument panel and the light on the switch will turn off.

If the BRAKE warning light on the instrument panel remains on with the electric parking brake disengaged, this indicates a fault: in this case, contact an authorized dealer.

### WARNING!
- Never leave children alone in a vehicle, or with access to an unlocked vehicle.
- Allowing children to be in a vehicle unattended is dangerous for a number of reasons. A child or others could be seriously or fatally injured. Children should be warned not to touch the park brake, brake pedal or the gear selector.
- Do not leave the key fob in or near the vehicle or in a location accessible to children. A child could operate power windows, other controls, or move the vehicle.
- Be sure the park brake is fully disengaged before driving; failure to do so can lead to brake failure and a collision.
- Always fully apply the park brake when leaving your vehicle, or it may roll and cause damage or injury.

### CAUTION!
- Never use gear position PARK (P) instead of the electric parking brake. Always engage the electric parking brake when parking the vehicle to prevent injury or damage caused by the unexpected movement of the vehicle.

### Electric Park Brake Operating Modes

The electric park brake may operate as follows:
- "Dynamic Operating Mode": this mode is activated by pulling the switch repeatedly while driving.
- "Static Engagement and Release Mode": with the vehicle stationary, the electric park brake can be activated by pulling the switch on the center console once. On the other hand, push the switch and the brake pedal at the same time to disengage the brake.
- "Drive Away Release": the electric park brake will automatically disengage with the driver side seat belt fastened and the detection of an action performed by the driver to move the vehicle (forward gear or reverse gear). This feature can be turned on or off in the Information and Entertainment System.

### NOTE:

- If the car is equipped with carbon-ceramic brake discs it is necessary to fasten the seat belts or turn off the electric park brake before starting to avoid damages to the ceramic brake discs.
- "Safe Hold": if the vehicle speed is lower than 1.9 mph (3 km/h), the gear selector is not in PARK (P) position and the driver's intention of leaving the vehicle is detected, the electric park brake will auto-
matically engage to hold the vehicle in safety conditions.

- "Auto Park Brake": if the vehicle speed is below 1.9 mph (3 km/h), the electric park brake will automatically engage when the gear selector is in PARK (P) position. The light on the switch located on the center console switches on together with the BRAKE warning light on the instrument panel when the park brake is engaged and applied to the wheels. Each automatic park brake engagement can be cancelled by pressing the switch on the center console and at the same time moving the gear selector for the transmission to position PARK (P).

Safe Hold

Safe Hold is a safety function that automatically engages the electric park brake in the event of a dangerous condition for the vehicle.

The electric park brake engages automatically to prevent vehicle movement if:
- The vehicle speed is below 2 mph (3 km/h).
- A transmission operating mode different from PARK (P) is activated.
- The driver's seat belt is not fastened.
- The driver side door is open.
- No attempts to apply pressure on the brake pedal have been detected.
- The vehicle is parked on roads with a slope of more than 4%.

The “Safe Hold” function can be temporarily disabled by pressing the switch located on the instrument panel when the vehicle is stationary and the driver side door open. Once disabled, the function will activate again when the vehicle speed reaches 12 mph (20 km/h) or the ignition is cycled to STOP and then to ON.

AUTOMATIC TRANSMISSION

The vehicle can be equipped with an electronically controlled 8-speed automatic transmission where gear shifting automatically takes place, depending on the vehicle usage instantaneous parameters (vehicle speed, grade, and accelerator pedal position).

The new transmission is an absolute innovation, as it can match the Stop/Start system with the traditional automatic transmissions with built-in torque converter. For further information, refer to the “Stop/Start” section within this chapter.

Manual gear shifting can still occur thanks to the "sequential mode" position for the gear selector.

WARNING!

- It is dangerous to shift out of PARK or NEUTRAL if the engine speed is higher than idle speed. If your foot is not firmly pressing the brake pedal, the vehicle could accelerate quickly forward or in reverse. You could lose control of the vehicle and hit someone or something. Only shift into gear when the engine is idling normally and your foot is firmly pressing the brake pedal.

- Unintended movement of a vehicle could injure those in or near the vehicle. As with all vehicles, you should never exit a vehicle while the engine is running. Before exiting a vehicle, always apply the park brake, shift the transmission into PARK, and turn the ignition STOP/OFF. When the ignition is in the STOP/OFF mode, the transmission is locked in PARK, securing the vehicle against unwanted movement.

- When leaving the vehicle, always make sure the ignition is in the STOP/OFF mode, remove the key fob from the vehicle, and lock the vehicle.
Automatic Transmission Limp Home Mode

Transmission function is monitored electronically for abnormal conditions. If a condition is detected that could result in transmission damage, Transmission Limp Home Mode is activated.

In this condition, the transmission stays in fourth gear, regardless of the selected gear. Positions PARK (P), REVERSE (R) and NEUTRAL (N) still work.

The   symbol might light up in the instrument cluster.

Temporary failure

In the event of a momentary problem, the transmission can be reset to regain all forward gears by performing the following steps:

1. Stop the vehicle.
2. Shift the transmission into PARK (P), if possible. If not, shift the transmission to NEUTRAL (N).
3. Push and hold the ignition until the engine turns OFF.
4. Wait for about 10 seconds, then restart the engine.
5. Shift into the desired gear range. If the problem is no longer detected, the transmission will return to normal operation.

NOTE:

Even if the transmission can be reset, we recommend that you visit your authorized dealer at your earliest possible convenience. Your authorized dealer has diagnostic equipment to determine if the problem could reoccur. If the transmission cannot be reset, service is required at your authorized dealer.

ALFA DNA / PRO SELECTOR

Alfa DNA / Pro System

This vehicle is equipped with an Alfa DNA / Pro system lever (located on the center console). There are up to four modes of operation to be selected according to driving style and road conditions:

- d = Dynamic (sports driving mode)
- n = Natural (mode for driving in normal conditions)

Never leave children alone in a vehicle, or with access to an unlocked vehicle. Allowing children to be in a vehicle unattended is dangerous for a number of reasons. A child or others could be seriously or fatally injured. Children should be warned not to touch the parking brake, brake pedal or the transmission gear selector.

Do not leave the key fob in or near the vehicle (or in a location accessible to children), and do not leave the ignition in the AVV or ON mode. A child could operate power windows, other controls, or move the vehicle.

Damage to the transmission may occur if the following precautions are not observed:

- Shift into or out of PARK or REVERSE only after the vehicle has come to a complete stop.
- Do not shift between PARK, REVERSE, NEUTRAL, or DRIVE when the engine is above idle speed.
- Before shifting into any gear, make sure your foot is firmly pressing the brake pedal.

CAUTION!

WARNING! (Continued)

Never leave children alone in a vehicle, or with access to an unlocked vehicle. Allowing children to be in a vehicle unattended is dangerous for a number of reasons. A child or others could be seriously or fatally injured. Children should be warned not to touch the parking brake, brake pedal or the transmission gear selector.

Do not leave the key fob in or near the vehicle (or in a location accessible to children), and do not leave the ignition in the AVV or ON mode. A child could operate power windows, other controls, or move the vehicle.

Damage to the transmission may occur if the following precautions are not observed:

- Shift into or out of PARK or REVERSE only after the vehicle has come to a complete stop.
- Do not shift between PARK, REVERSE, NEUTRAL, or DRIVE when the engine is above idle speed.
- Before shifting into any gear, make sure your foot is firmly pressing the brake pedal.

CAUTION!

NOTE:

Even if the transmission can be reset, we recommend that you visit your authorized dealer at your earliest possible convenience. Your authorized dealer has diagnostic equipment to determine if the problem could reoccur. If the transmission cannot be reset, service is required at your authorized dealer.

ALFA DNA / PRO SELECTOR

Alfa DNA / Pro System

This vehicle is equipped with an Alfa DNA / Pro system lever (located on the center console). There are up to four modes of operation to be selected according to driving style and road conditions:
☐ a = Advanced Efficiency (ECO driving mode for maximum fuel savings).
☐ RACE = track race driving mode (RACE mode is Quadrifoglio exclusive).
☐ \( \beta \) = adjusts the calibration of the suspensions (if equipped).

Unlike the other modes, the RACE position is unstable, therefore, by rotating the selector to RACE, it will return to its initial position “d”.

On the instrument panel display, the different modes are characterized by different colors:
☐ Dynamic - Red
☐ Natural - Blue
☐ Advanced Efficiency - Green
☐ RACE - Yellow (RACE mode is Quadrifoglio exclusive)

The different driving modes are graphically different from the color of the frames and the contents only on the “performance” screens.

Driving Modes

“Dynamic” Mode

Activation/Deactivation
It is activated by rotating the selector to the letter “d”, the displays light up in red.

To deactivate the Dynamic mode, move the selector to “n”, Natural mode.

“Natural” Mode

Activation/Deactivation
It is activated by rotating the selector to the letter “n”, the displays light up in blue.

To deactivate the Natural mode, move the selector to another mode (“d” or “a”).

“Advanced Efficiency” Mode

Activation/Deactivation
It is activated by rotating the selector to the letter “a”, the displays light up in green.

To deactivate the Advanced Efficiency mode, move the selector to “n”, Natural mode.

“RACE” Mode — If Equipped

Activation/Deactivation
It is activated by rotating the selector to position “RACE”, the displays light up in yellow.

NOTE:
It is recommended to activate this mode at the track.

To deactivate the “RACE” mode, take the selector to position “RACE” again and the system will be set to “d”, Dynamic mode.

NOTE:
☐ When the engine is next started, the “Advanced Efficiency”, “Dynamic” and “Natural” mode selected previously is retained. The system will reactivate in “Advanced Efficiency”, “Dynamic” or “Natural” mode, depending on which mode was selected before the engine was stopped.

☐ When the engine is next started, the “RACE” mode selected previously is not retained. The system will reactivate in “Dynamic” mode.

☐ It is not possible to go directly from “Dynamic” mode to “Advanced Efficiency” mode and vice versa. You must always activate the “Natural” mode first and then select the other mode.
ALFA ACTIVE SUSPENSION (AAS) — IF EQUIPPED

The system continuously monitors the damping of the suspension through the actuator installed on each shock absorber. The calibration of the shock absorbers can be adjusted to the conditions of the road surface and to the dynamic conditions of the vehicle, improving its comfort and road handling.

Even while driving, the driver can choose between two types of suspension calibration: a more sporty ride or a more comfortable one. This is only available in “d”, or "RACE" mode (RACE mode is Quadrifolgio exclusive).

By pushing the button, the system will work with the shock absorber calibration which favors driving comfort.

If the system fails, the following symbol will appear in the instrument cluster display.

STOP/START SYSTEM

Stop/Start System

The Stop/Start system automatically shuts off the engine during a vehicle stop if the required conditions are met. Releasing the brake pedal or accelerator pedal will automatically restart the engine.

The function was developed to increase vehicle efficiency by reducing fuel consumption, gas emissions, and sound pollution.

Operating Mode

Stopping the Engine

With vehicle at a standstill and brake pedal pressed, the engine switches off if the gear selector is in a position other than REVERSE (R).

The system does not operate when the gear selector is in REVERSE (R), in order to making parking maneuvers easier.

In the event of stops uphill, engine switching off is disabled to make the "Hill Start Assist" function available (works only with running engine).

NOTE: The engine can only be automatically stopped after having run at about 6 mph (10 km/h). After an automatic restart, the vehicle only needs to exceed a speed of 0.3 mph (0.5 km/h) to stop the engine.

Engine stopping is signaled by the symbol lighting up on the instrument cluster display.

Restarting the Engine

To restart the engine, release the brake pedal.

With the brake pressed and the transmission in automatic mode DRIVE (D), the engine will restart by shifting to REVERSE (R), to PARK (P) or to "AutoStick".

With brake pressed if the gear selector is in "AutoStick" mode, the engine will restart by shifting to PARK (P) or by moving the selector to + or -.
System Manual Activation/Deactivation

To manually activate/deactivate the system, push the button located in the control panel on the left of the steering wheel.

Stop/Start Button

☐ Light off: system activated.
☐ Light on: system deactivated.

SPEED LIMITER

Description

This feature allows the speed of the vehicle to be limited to speeds, which can be set by the driver.

The maximum speed can be set with the vehicle stationary or in motion. The minimum speed that can be set is 18 mph (30 km/h).

When this feature is active, the vehicle speed depends on the pressing of the accelerator pedal until the programmed speed limit is reached (see "Speed Limit Programming" paragraph).

Activation

The feature can be activated/deactivated through the Information and Entertainment System.

Activating The Device

To access this feature on the main menu, select the following items in sequence: "Settings", "Safety", "Speed Limiter" and "ON".

The activation of this feature is signaled by the displaying of the green symbol along with the last speed set.

Speed Limit Programming

To access the function, on the main menu select the following items in sequence: "Settings", "Safety" and "Speed Limiter Set Speed".

By turning the Rotary Pad, the speed increases by 5 mph (5 km/h), from a minimum of 18 mph (30 km/h) to a maximum of 112 mph (180 km/h).

Deactivation

Deactivating The Device

To access this feature on the main menu, select the following items in sequence: "Settings", "Safety", "Speed Limiter" and "OFF".

Automatic Deactivation Of The Device

The device deactivates automatically in the event of fault in the system. In this case, contact an authorized dealer.

SPEED CONTROL (CRUISE CONTROL)

Speed Control Description

This is an electronically controlled driving assistance feature that allows the desired vehicle speed to be maintained, without having to press the accelerator pedal. This feature can be used at a speed above 25 mph (40 km/h) on long stretches of dry, straight roads with few variations (highways).

The speed control buttons are located on the left side of the steering wheel.
NOTE:
□ To ensure correct operation, the speed control is designed to deactivate if more than one function is operated simultaneously. In this case, the system can be reactivated by pushing the on/off button and setting the desired speed.
□ It is not recommended to use this feature in city traffic.
While driving downhill, the system could brake the vehicle to keep the set speed the same.

Activating
To activate the Speed Control System, push the on/off button location on the left side of the steering wheel.

NOTE:
The system cannot be engaged in FIRST or REVERSE gear. It is advisable to engage it in THIRD gear or higher if using the Autostick feature.

WARNING!
Leaving the Speed Control system on when not in use is dangerous. You could accidentally set the system or cause it to go faster than you want. You could lose control and have an accident. Always leave the system OFF when you are not using it.

Setting The Desired Speed
To set a desired speed, proceed as follows:
1. Turn the Speed Control on.

Speed Control On/Off Switch
The activation of the system is signaled by the white warning light illuminating on the instrument cluster.
The Speed Control function can remain active at the same time as the Speed Limiter System. If the set speed is higher than the speed set with the Speed Limiter, the set speed will be lowered to that of the Speed Limiter.
This function remains available in RACE mode.
2. When the vehicle has reached the desired speed, push the SET switch up or down and release to activate. When the accelerator is released, the vehicle will maintain the selected speed automatically.

**Increasing/Decreasing Speed**

**Increasing Speed**

Once the Speed Control has been activated, the speed can be increased by pushing the SET switch upward.

By keeping the switch pushed, the set speed will increase until the switch is released. The new speed will then be set.

At every movement of the SET switch, the set speed can be adjusted.

**Decreasing Speed**

When the system is active, to reduce the speed, push the SET switch downward.

By keeping the switch pushed, the set speed will decrease until the switch is released. The new speed will then be set.

At every movement of the SET switch, the set speed can be adjusted.

**NOTE:**

Moving the SET switch allows to adjust the speed according to the selected unit of measurement set on the Information and Entertainment System (see dedicated supplement).

**Accelerating When Overtaking**

Press the accelerator as you would normally. When the pedal is released, the vehicle will return to the set speed.

**Use Of The Feature On Hilly Routes**

The system can automatically downshift to keep the set speed when driving on hilly routes.

On steep grades, the loss or gain in speed may be considerable and is advisable to deactivate the Speed Control.

**NOTE:**

The system keeps the speed set even uphill and downhill. A slight variation in the speed on slight rises is completely normal.

**Recalling The Speed**

Once the system has been deactivated, but not canceled, the previously set speed can be recalled by pushing the RES button and removing your foot from the accelerator. The system will be set to the last stored speed.
NOTE:
Before resuming the previously set speed, you must accelerate to a speed close to that speed.

Resume Button Location
In Autostick (sequential) mode, before resuming the previously set speed, you should accelerate until you are close to that speed. Then, push and release the RES button.

Deactivating
Lightly pressing the brake pedal deactivates the speed control without deleting the set speed.

The speed control may also be deactivated by applying the electric park brake or when the braking system is operated (e.g. operation of the ESC system).

The set speed is deleted in the following cases:
- Pushing the on/off button a second time.
- The ignition is cycled to STOP.
- If there is a malfunction with the Speed Control.

ADAPTIVE CRUISE CONTROL (ACC) — IF EQUIPPED

System Description
The Adaptive Cruise Control (ACC) is a driver assist system that combines the speed control functions with controlling the distance from the vehicle ahead.

The system allows to set and hold the vehicle at the desired speed without needing to press the accelerator. It also allows to set and hold a distance from the vehicle ahead (these settings are set by the driver).

The Adaptive Cruise Control (ACC) uses a radar sensor located behind the front bumper and a camera located in the center/upper part of the windshield, to detect the presence of a vehicle close ahead.

This system enhances driving comfort while on the highway or out of town with light traffic.
If the sensor does not detect a vehicle ahead, the system will maintain a fixed set speed.

If the sensor detects a vehicle ahead, the system automatically intervenes by braking (or accelerating) slightly in order not to exceed the original set speed, so that the vehicle keeps the preset distance, seeking to adapt to the speed of the vehicle ahead.

**NOTE:**
Adaptive Cruise Control performance is not guaranteed under the following circumstances, and it is recommended to turn the system off when:

- Driving in fog, heavy rain, or snow.
- Driving in heavy traffic or construction zones.
- Driving on icy, snowy, slippery roads, roads with steep climbs and descents, or roads with numerous turns and bends.
- Entering a turn lane.
- When circumstances do not allow safe driving at a constant speed.

### WARNING!
- Adaptive Cruise Control (ACC) is a convenience system. It is not a substitute for active driving involvement. It is always the driver’s responsibility to be attentive of road, traffic, and weather conditions, vehicle speed, distance to the vehicle ahead; and, most importantly, brake operation to ensure safe operation of the vehicle under all road conditions. Your complete attention is always required while driving to maintain safe control of your vehicle. Failure to follow these warnings can result in a collision and death or serious personal injury.

### Activation/Deactivation
The system has four operating states:
- Enabled (speed not set)
- Activated (speed set)
- Paused
- Deactivated
### Enabling/Activating

To enable the system, push and release the button located on the left side on the steering wheel.

**On/Off Button**

When the system is enabled and ready to operate, the display shows the white icon above dashes in place of the speed.

**Enabled Icons**

Setting a speed activates the system. The display shows the icon in green with the set speed.

**NOTE:**
The system cannot be enabled when RACE mode is active.

**Pausing/Deactivating**

With the feature enabled (speed not set), push the button to disable.

With the feature active (speed set), push the button to pause. The display will show the icon in white with the speed in brackets. To deactivate the feature, push the button a second time.

**Setting The Desired Speed**

The speed can be set from a minimum of 20 mph (30 km/h) to a maximum of 110 mph (180 km/h).

When the vehicle reaches the desired speed, push the SET switch upward or downward and release it to activate the system. When the accelerator is released, the vehicle will maintain the set speed automatically.

**WARNING!**

Leaving the Adaptive Cruise Control (ACC) system on when not in use is dangerous. You could accidentally set the system or cause it to go faster than you want. You could lose control and have a collision. Always leave the system off when you are not using it.
The system will return to normal operation as soon as the accelerator pedal is released.

The system cannot be set:

- When pressing the brake pedal.
- When the brakes are overheated.
- When the electric park brake has been operated.
- When either PARK (P), REVERSE (R) or NEUTRAL (N) is engaged.
- When the engine rpm is above a maximum threshold.
- When the vehicle speed is not within the operational speed range.
- When the Electronic Stability Control (ESC) (or ABS or other stability control systems) are operating or have just operated.
- When the ESC system is off.
- When the Forward Collision Warning system is braking automatically.
- In the event of system failure.
- When the engine is OFF.
- In case of obstruction of the radar sensor (in this case the bumper area where it is located must be cleaned).

If the system is set, the conditions described above also cause a cancellation or deactivation of the system. These situations may vary according to the conditions.

**NOTE:**

The system will not be deactivated when speeds higher than those set are reached by pressing the accelerator pedal above 110 mph (180 km/h). In these situations, the system may not work correctly and it is recommended to deactivate it.

**To Vary The Speed Setting**

**Increasing Speed**

Once the system has been activated, you can increase the speed by pushing the SET switch upward. Each time the switch is pushed, the speed increases by 1 mph.

By pushing and holding the switch upward, the set speed will increase in increments of 5 mph until the switch is released. Then, the new speed will be set.

**Decreasing Speed**

Once the system has been activated, you can decrease the speed by pushing the SET switch downward. Each time the switch is pushed, the speed decreases by 1 mph.

By pushing and holding the switch downward, the set speed will decrease in increments of 5 mph until the switch is released. Then, the new speed will be set.

**NOTE:**

- Moving the SET switch allows you to adjust the speed according to the selected unit of measurement ("US" or "Metric") set on the Information and Entertainment System (see dedicated supplement).
- When the unit of measurement is set to Metric, pushing and holding the SET switch will adjust the speed in 10 km/h increments.
- By keeping the accelerator pedal depressed, the vehicle can continue to accelerate beyond the set speed. In this case, use the SET switch to set the speed to the vehicle’s current speed.
- When you push the SET button to reduce the speed, the braking system intervenes automatically if the engine brake does not slow the vehicle down sufficiently to reach the set speed. The device holds the set speed uphill and downhill; however a slight variation is entirely normal, particularly on slight inclines.
- The transmission could shift to a lower gear when driving downhill, or when accelerating. This is normal and necessary to maintain the set speed.
- The system will disable while driving if the brakes overheat.
Accelerating When Overtaking

When driving with ACC activated and following a vehicle, the system will provide an additional acceleration up to the ACC set speed to assist in passing the vehicle. This additional acceleration is triggered when the driver utilizes the left turn signal and will only be active when passing on the left hand side.

The system detects the direction of traffic automatically when the vehicle passes from left-hand traffic to right-hand traffic. In this case, the overtaking assist function is only active when the reference vehicle is overtaken on the right. The additional acceleration is deactivated when the driver uses the right direction indicator and returns to the original lane.

Resuming The Speed

Once the system has been canceled but not deactivated, to resume a previously set speed, simply push the RES button and remove your foot from the accelerator to recall it.

The system will be set to the last stored speed.

Setting The Distance Between Vehicles

The distance between your vehicle and the vehicle ahead may be set to one bar (short), two bars (medium), three bars (long), or four bars (maximum).

The distances from the vehicle ahead are proportional to speed.

The interval of time with relation to the vehicle ahead remains constant and varies from one second (for the short distance one-bar setting) to two seconds (for the maximum distance four-bar setting).

The set distance is shown on the display by a dedicated icon.

The setting is four (maximum) the first time the system is used. After the distance has been modified by the driver, the new distance will be stored also after the system is deactivated and reactivated.
To Decrease The Distance
Push and release the distance button to decrease the distance setting. The distance setting decreases by one bar (shorter) every time the button is pushed.

Distance Button
The set speed is held if there are no vehicles ahead. Once the shortest distance has been selected, the next push of the button will set the maximum distance.

If a slower vehicle is detected in the same lane, the vehicle icon on the display illuminates from grey to white. The system automatically adjusts the vehicle’s speed to keep the set distance, independently of the set speed.

The vehicle holds the set distance until:
- The vehicle ahead accelerates to a speed higher than the set speed.
- The vehicle ahead leaves the lane or the detection field of the Adaptive Cruise Control system sensor.
- The distance setting is changed.
- The Adaptive Cruise Control system is deactivated/paused.

**WARNING!**
- The maximum breaking applied by the system is limited. The driver may apply the brakes in all cases if needed.
- If the system predicts that the braking level is insufficient to hold the set distance, either “BRAKE!” or a dedicated message is displayed to warn the driver of approaching the vehicle ahead. An acoustic signal is also emitted. In this case, it is advised to brake immediately as necessary to hold a safe distance from the vehicle ahead.
- The driver is responsible for ensuring that there are no pedestrians, other vehicles or objectives along the direction of the vehicle. Failure to comply with these precautions may cause serious accidents and injuries.

**“Stop And Go” Function**
The “Stop and Go” operating strategy allows you to maintain a safe distance from the vehicle ahead until the vehicle has completely stopped. It will also restart the vehicle automatically if the vehicle ahead drives away within two seconds, otherwise it is necessary to press the accelerator pedal or push the RES button to restart.

**WARNING!**
When the ACC system is resumed, the driver must ensure that there are no pedestrians, vehicles or objects in the path of the vehicle. Failure to follow these warnings can result in a collision and death or serious personal injury.
Deactivation

The system is deactivated and the set speed is canceled if:

- The button on the Adaptive Cruise Control is pushed (with the system enabled or paused).
- The ignition is cycled to STOP.
- RACE mode is activated.

The system is canceled (the set speed and distance are stored):

- When the system is paused (refer to the “Activation / Deactivation” section).
- When the conditions shown in the “Setting The Desired Speed” section occur.

Limited Operation Warning

If the dedicated message is shown on the display, a condition limiting the Adaptive Cruise Control operation may have occurred.

This could be due to an obstruction of the vehicle’s sensor or camera. It could also be due to a fault in the system. If an obstruction is detected, clean the area of the windshield opposite the interior rear view mirror, where the camera is located, as well as the area of the front bumper where the sensor is located. Then check that the message has disappeared.

When the conditions limiting the system functions end, normal operation will resume. Should the fault persist, contact an authorized dealer.

Precautions While Driving

The system may not work correctly in some driving conditions (see below). The driver must control the vehicle at all times.

Vehicle Not Aligned

The system may not detect a vehicle traveling in the same lane, in the same direction, but is not aligned. It also may not detect a vehicle which is cutting in from a side lane. Sufficient distance from the vehicles ahead may not be guaranteed in these cases.

The non-aligned vehicle can weave in and out of the driving lane causing the vehicle to brake or accelerate unexpectedly.

Steering And Curves

Driving on curves with the system set could limit speed and acceleration to guarantee vehicle stability, even if no vehicles are detected ahead.

When leaving the curve, the system resets the previously set speed.

NOTE:

- In cases of narrow curves, the performance of the system could be limited. In this case, it is advisable to deactivate the system.
- The system only limits the speed DURING a bend and not BEFORE it.

Using The System On Slopes

When driving on roads with a variable incline, the system may not detect the presence of a vehicle in the lane. System performance could be limited according to speed, load, traffic conditions and steep slopes.
Lane Change

The system may not detect the presence of a vehicle until it is fully in your lane.

In this case, sufficient distance from the vehicle which is changing lanes may not be guaranteed. It is advisable to pay the utmost attention at all times and be always ready to apply the brakes if needed.

Small Vehicles

Some narrow vehicles (e.g. bicycles and motorcycles) traveling near the outer edges of the lane or which enter the lane from curb side are not detected until they are fully in the lane.

Sufficient distance from the vehicles ahead may not be guaranteed in these cases.

Stationary Objects And Vehicles

The system cannot detect the presence of stationary vehicles or objects. For example, the system will not operate if the vehicle ahead leaves the lane and a vehicle ahead of that one is stationary in that lane. Pay the utmost attention at all times and be always ready to apply the brakes if needed.

Objects And Vehicles Moving In Opposite Or Crosswise Direction

The system cannot detect the presence of objects or vehicles traveling in opposite or crosswise directions and consequently will not activate.

General Information

This vehicle has systems that operate on radio frequency that comply with Part 15 of the Federal Communications Commission (FCC) rules and with Industry Canada Standards RSS-GEN/210/220/310.

Operation is subject to the following two conditions:

1. The device may not cause harmful interference.
2. The device must accept any interference received, including interference that may cause undesired operation of the device.

Changes or modifications to any of these systems by other than an authorized service facility could void authorization to use this equipment.
PARK SENSOR SYSTEM

Vehicles With Rear Sensors Only
The parking sensors, located in the rear bumper, detect obstacles while the vehicle is in REVERSE. When an obstacle is detected, an audible alert will sound and visual indications will be displayed on the instrument cluster.

An acoustic signal will not sound if the vehicle is in PARK.

System Activation/Deactivation
The system, when engaged, is automatically activated by engaging the REVERSE gear, while it is deactivated by engaging another gear.

Vehicles With Front And Rear Sensors
The parking sensors, located in the front and rear bumpers, detect the presence of any obstacles and warn the driver through an audible signal and visual indications on the instrument cluster.

Engagement/Disengagement Of Park Sensor System
To turn the system off, push the Park Sensor System switch located to the left of the headlight switch. The indicator light within the switch will illuminate when the system is turned off. Pushing the switch a second time will turn the system back on, and the indicator light will turn off.

NOTE:
When the ignition is cycled to ON, the Park Sensor System keeps the last state when the engine was stopped (activated or deactivated) in its memory.

System Activation/Deactivation
When the REVERSE gear is engaged and the system is on, the front and rear sensors are activated. If the vehicle moves from
REVERSE to a forward gear, the rear sensors are deactivated, while the front sensors remain active until the speed of 9 mph (15 km/h) is exceeded.

**NOTE:**
Some conditions may influence the performance of the Park Sensor System:

- Reduced sensor sensitivity could be due to the presence of ice, snow, mud, or thick paint on the surface of the sensor.
- The sensors may detect a false obstacle (echo interference) due to mechanical interference, for example when washing the vehicle or in extreme weather.
- The signals sent by the sensors can be altered by the presence of ultrasonic systems (e.g. pneumatic brake systems of trucks or pneumatic drills) near the vehicle.
- System performance can be influenced by the position of the sensors. For example, due to a change in the ride setting (caused by wear to the shock absorbers or suspension), by changing tires, overloading the vehicle or operations that require the vehicle to be lowered.
- Be sure not to place bumper stickers or other adhesives over the sensors as this will affect system performance.

---

**WARNING!**
Drivers must be careful when backing up even when using the Parking Sensor system. Always check carefully behind your vehicle, and be sure to check for pedestrians, animals, other vehicles, obstructions, or blind spots before backing up. You are responsible for the safety of your surroundings and must continue to pay attention while backing up. Failure to do so can result in serious injury or death.

---

**CAUTION!**
- The Parking Sensor system is only a parking aid and it is unable to recognize every obstacle, including small obstacles. Parking curbs might be temporarily detected or not detected at all. Obstacles located above or below the sensors will not be detected when they are in close proximity.
- The vehicle must be driven slowly when using the Parking Sensor system in order to be able to stop in time when an obstacle is detected. It is recommended that the driver looks over his/her shoulder when using the Parking Sensor system.

---

**LANE DEPARTURE WARNING (LDW) SYSTEM — IF EQUIPPED**

**Description**
The Lane Departure Warning system uses a forward looking camera located on the windshield to detect lane markings and measure vehicle position within the lane boundaries. When one or both lane limits are detected and the vehicle passes over one without an activated turn signal, the system emits a visual as well as an audible signal.

If the vehicle continues to go beyond the line of the lane without any intervention from the driver, the surpassed line will light up on the display (left or right) to urge the driver to bring the vehicle back into the limits of the lane.

**CAUTION!**
- Do not tamper with nor operate on the camera. Do not close the openings in the aesthetic cover located under the interior rear view mirror. In the event of a failure of the camera, contact your authorized dealer.
STARTING AND OPERATING

CAUTION! (Continued)

☐ The system is activated/deactivated by pushing the button located on the end of the multifunction lever.

☐ Lane Departure Warning System Activation/Deactivation Button

NOTE:
When the engine is started, the system maintains the operating mode that was selected when it was turned OFF.

Activation Conditions
Once turned on, the system becomes active only if the following conditions are met:
☐ The vehicle speed is above 37 mph (60 km/h) (the system is deactivated at speeds equal to or greater than 110 mph (180 km/h).
☐ The lane limit lines are visible at least on one side.
☐ There are suitable visibility conditions.
☐ The road is straight or with wide radius bends.
☐ A suitable distance is kept from the vehicle in front.
☐ The turn signal is not active.

REAR BACK-UP CAMERA / DYNAMIC GRIDLINES

Description
The Rear Back-Up Camera is located just under the vehicle’s trunk lid, above the rear license plate.

NOTE:
When the engine is started, the system maintains the operating mode that was selected when it was turned OFF.

Camera operation may also be compromised by the presence of dust, condensation, dirt or ice on the windshield, by traffic conditions (e.g. vehicles that are driving not aligned with yours), vehicle driving in a transverse or opposite way on the same lane, bend with a small radius of curvature), by road surface conditions and by driving conditions (e.g. off-road driving). Make sure the windshield is always clean. Use specific detergents and clean cloths to avoid scratching the windshield. The camera operation may also be limited or absent in some driving, traffic and road surface conditions.

If the windshield must be replaced due to scratches, chipping or breakage, contact exclusively your authorized dealer. Do not replace the windshield on your own. It is advisable to replace the windshield if it is damaged in the area of the camera.

Rear Back-Up Camera Location
When the vehicle is in REVERSE, the Information and Entertainment System display will show the area behind the vehicle, as seen by the Rear Back-Up Camera, along with a warning message.

Selecting “Camera Delay” will allow the camera view to remain on the display shortly after the vehicle is no longer in REVERSE, followed by the previously active screen.

Selecting “Camera Guidelines” will activate the display of the dynamic guidelines that indicate the route of the vehicle while in REVERSE.

**WARNING!**

Drivers must be careful when backing up even when using the Rear Back-Up Camera. Always check carefully behind your vehicle, and be sure to check for pedestrians, animals, other vehicles, obstructions, or blind spots before backing up. You are responsible for the safety of your surroundings and must continue to pay attention while backing up. Failure to do so can result in serious injury or death.

**CAUTION!**

- To avoid vehicle damage, the vehicle must be driven slowly when using the Rear Back-Up Camera to be able to stop in time when an obstacle is seen. It is recommended that the driver look frequently over his/her shoulder when using the Rear Back-Up Camera.

**Symbols And Messages On The Display**

Through the Information and Entertainment System settings, by activating the 'Camera Guidelines' feature, guidelines can be seen on the rear camera display. If activated, the guidelines are positioned on the image to highlight the width of the vehicle and the expected reverse path based on the steering wheel position.

A superimposed central line indicates the center of the vehicle to assist in rear parking maneuvers. The various colored areas indicate the distance from the rear of the vehicle.

The table below shows the approximate distances for each area:
STARTING AND OPERATING

Messages On The Display
If the trunk lid is lifted, the camera will not detect any obstacle behind the vehicle. The display will show a dedicated warning message.

Make sure the trunk lid is closed by pushing next to the lock until it clicks.

Important Notes

☐ Ice, snow or mud on the surface of the camera may reduce its sensitivity. It is important to keep the camera surface clean, and free from debris.

☐ When parking, be aware of obstacles that may be above or under the camera range.

REFUELING THE VEHICLE

Refueling The Vehicle
Before refueling, make sure that the fuel type is correct.
Also, stop the engine before refueling.

NOTE:
An inefficient catalytic converter leads to harmful exhaust emissions, thus contributing to air pollution.

CAUTION!
Never introduce leaded fuel to the tank, even in small amounts in an emergency, as this would damage the catalytic converter beyond repair.

Refueling Procedure
The fuel filler door is unlocked when the central door locking system is released, while it is automatically locked when the central locking system is applied.

Opening The Fuel Filler Door
To refuel proceed as follows:

1. Open fuel filler door by pressing on the point shown by the arrow.

2. Remove the fuel filler cap.

3. Insert the fuel nozzle fully into the filler pipe.

4. When the fuel nozzle “clicks” or shuts off, before removing the nozzle, wait for at least 10 seconds in order for the fuel to flow inside the tank.

5. Remove the fuel filler nozzle, tighten the gas cap about ¼ turn until you hear one click. This is an indication that cap is properly tightened.

</table>
The label indicates the fuel type (UNLEADED FUEL).

Emergency Fuel Door Opening

In the event of an emergency the fuel filler door can be opened by operating from inside the trunk.

Proceed as follows:

1. Open the trunk and locate the emergency fuel filler release cap on the inside lining.

2. Open the cap, and pull the cord inside to unlock the fuel filler door.

3. Open the fuel filler door by pressing on it (see the previous instructions).

WARNING!

- Never have any smoking materials lit in or near the vehicle when the fuel door is open or the tank is being filled.
- Never add fuel when the engine is running. This is in violation of most state and federal fire regulations and may cause the MIL to turn on.
- A fire may result if gasoline is pumped into a portable container that is inside of a vehicle. You could be burned. Always place gas containers on the ground while filling.

NOTE:
If the filler compartment is washed with a pressure washer, keep it at a distance of at least 8 inches (20cm).
IN CASE OF EMERGENCY

Have a flat tire or a burnt-out bulb?

At times, a problem such as these may interfere with your driving experience.

The section on emergencies can help you to deal with critical situations independently.

In an emergency, we recommend that you call the phone number found in the Warranty Book.

You may also consider contacting an authorized dealer.

ROADSIDE ASSISTANCE

To contact Alfa Romeo Emergency Roadside Assistance Dial toll-free 1–844–253–2872 for U.S. Residents or 1-800-363-4869 for Canadian Residents

☐ Provide your name, vehicle identification number, license plate number, and your location, including the telephone number from which you are calling.

☐ Briefly describe the nature of the problem and answer a few simple questions.

☐ You will be given the name of the service provider and an estimated time of arrival. If you feel you are in an “unsafe situation”, please let us know. With your consent, we will contact local police or safety authorities.

HAZARD WARNING LIGHTS

The Hazard Warning switch is located in the switch bank below the radio screen.

Push the switch once to turn the hazard warning flashers on. When the switch is activated, all directional turn signals will flash on and off to warn oncoming traffic of an emergency. Push the switch a second time to turn the hazard warning flashers off.

This is an emergency warning system and it should not be used when the vehicle is in motion. Use it when your vehicle is disabled and is creating a safety hazard for other motorists.

When you must leave the vehicle to seek assistance, the hazard warning flashers will continue to operate even though the ignition is cycled to OFF.

NOTE:

In some particular climate conditions, such as low temperature, humidity, or after washing the car, a thin condensation layer may form on the internal surfaces of the front and rear headlights. This condensation will disappear after switching on the headlights.

BULB REPLACEMENT

General Instructions

☐ Before replacing a bulb, check the contacts for oxidation.

☐ Replace blown bulbs with others of the same type and power.

☐ After replacing a headlight bulb, always check its alignment.

☐ When a light is not working, check that the corresponding fuse is intact before changing the bulb. For the location of fuses, refer to “Fuses” in this chapter.

CAUTION!

Prolonged use of the hazard warning flashers may discharge the vehicle’s battery.
**Types Of Bulbs**

The vehicle may be equipped with the following bulbs

<table>
<thead>
<tr>
<th>Glass Bulbs (Type A): They are press-fitted. Pull to extract.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Bayonet-Type Bulbs (Type B): To remove them from their holder, press the bulb and turn it counterclockwise, then extract it.</td>
</tr>
<tr>
<td>Tubular Bulbs (Type C): Release them from their contacts to remove.</td>
</tr>
<tr>
<td>Halogen Bulbs (Type D): To remove the bulb, turn the connector to the side and pull it out.</td>
</tr>
<tr>
<td>Halogen Bulbs (Type E): To remove the bulb, turn it counterclockwise.</td>
</tr>
<tr>
<td>Xenon Gas Discharge Bulb (Type F): To remove the bulb, contact an authorized dealer.</td>
</tr>
</tbody>
</table>

IN CASE OF EMERGENCY

Replacing Exterior Bulbs

NOTE:
Only replace the bulb when the engine is off. Also ensure that the engine is cold, to prevent the risk of burns.

Direction Indicators
To change the bulb of these lights, proceed as follows:
1. Operating inside the engine compartment, remove the protective cover.
2. Remove protective cover.
3. Turn the bulb/connector assembly counterclockwise, and then slide it off the headlight body.
4. Remove the bulb by sliding it off the bulb holder.
5. Install the new bulb, making sure it is correctly inserted in the bulb holder.
6. Insert the bulb/connector assembly in the housing on the headlight body and turn it clockwise, making sure that it is locked correctly.
7. Install the protective cover.

Front Light Cluster with Main Beam Xenon Gas Discharge Headlights
To replace the bulbs of the main beam headlights, contact an authorized dealer.

CAUTION!
Do not touch the new bulb with your fingers. Oil contamination will severely shorten bulb life. If the bulb comes in contact with any oily surface, clean the bulb with rubbing alcohol.

FUSES

Introduction

The fuses protect electrical systems against excessive current.

When a device does not work, you must check the electrical circuit inside the fuse for a break/melt.

Also, please be aware that using power outlets for extended periods of time with the engine off may result in vehicle battery discharge.

 Fuse Extracting Pliers

To replace a fuse, use the pliers hooked to the trunk fusebox cover.

The fuses, which can be replaced by the user, are grouped in two boxes below the passenger side foot board and inside the trunk.

Fuse Extracting Pliers

1 — MINI fuse
2 — J-CASE fuse

---

WARNING!

- When replacing a blown fuse, always use an appropriate replacement fuse with the same amp rating as the original fuse. Never replace a fuse with another fuse of higher amp rating. Never replace a blown fuse with metal wires or any other material. Do not place a fuse inside a circuit breaker cavity or vice versa. Failure to use proper fuses may result in serious personal injury, fire and/or property damage.

- Before replacing a fuse, make sure that the ignition is off and that all the other services are switched off and/or disengaged.

- If the replaced fuse blows again, contact an authorized dealer.

- If a general protection fuse for safety systems (air bag system, braking system), power unit systems (engine system, transmission system) or steering system blows, contact an authorized dealer.

Fuse Location

After use, return the pliers to their proper position by following the below procedures:

- Grasp the pliers from the upper tabs and insert them into their housing.
- Push downward on the pliers into their housing until they click into place.
Control Unit Under Passenger Side Footboard
To access the fuses, proceed as follows:
1. Lift the upper end of the footboard on the passenger side, pulling to release the two buttons.
2. Unscrew the two hooks, and remove the panel by pulling downward.

Release Hooks On Footboard
2 — Panel

The fuses are freely accessible on the control unit.
After replacing the fuse, make sure that panel and footboard are correctly locked back into place.

Luggage Compartment Fuse Box
To access the fuses, proceed as follows:
1. Lift the luggage compartment cover.
2. Remove the control unit cover.

Release Buttons On Footboard
1 — Footboard

The fuses are freely accessible on the control unit.
The number identifying the electrical component corresponding to each fuse is shown on the cover.
After replacing a fuse, make sure that you have closed cover correctly.

Luggage Compartment Control Unit
TIRE SERVICE KIT — IF EQUIPPED

Description

If a tire is punctured, you can make an emergency repair using the Tire Service Kit located in the trunk beneath the load floor.

NOTE:

Only Quadrifoglio models are equipped with a Tire Service Kit. The remaining models will be equipped with Run Flat Tires. Refer to “Tires — General Information” in “Servicing And Maintenance” for further information.

Tire Service Kit Components

The Tire Service Kit includes:

- Sealant cartridge containing the sealing fluid.
- Filler tube.
- Adhesive label with the writing “Max. 50 mph (80 km/h)”, to be attached in a position easily visible to the driver (eg. on the dashboard) after repairing the tire.
- Air compressor, complete with pressure gauge and connectors.
- An instruction pamphlet for reference in prompt and correct use of the Tire Service Kit, which must be then given to the personnel dealing with the sealant-treated tire.
- A pair of protective gloves.
- Adaptors for inflating different elements.

NOTE:

The sealant is effective with external temperatures of between -40°F (-40°C) and 122°F (50°C). The sealant has an expiration date.

To use the Tire Service Kit, proceed as follows:

1. Stop the vehicle in a position where you can repair the tire safely. You should be as far as possible from the side of the road, and in a position that is not dangerous for oncoming traffic. Activate the hazard warning flashers, remove the safety triangle from the trunk, and place it at a suitable distance from the vehicle.
to make other drivers aware of your presence.

2. Verify that the valve stem (on the wheel with the deflated tire) is in a position that is near to the ground. This will allow the tire service kit hoses to reach the valve stem and keep the tire repair kit flat on the ground.

3. Place the gear selector to PARK (P).

4. Apply the electric park brake and turn the engine OFF.

Inflation Procedure

To use your Tire Service Kit, proceed as follows:

1. Apply the electric park brake.

2. Insert the sealant cartridge containing the sealing fluid in the proper compressor holder, pushing down hard. Unscrew the tire valve cap, take out the filler tube and tighten the fitting on the tire valve.

WARNING!

☐ Do not attempt to seal a tire on the side of the vehicle closest to traffic. Pull far enough off the road to avoid the danger of being hit when using the Tire Service Kit.

☐ Do not use Tire Service Kit or drive the vehicle under the following circumstances:

☐ If the puncture in the tire tread is approximately 1/4 inch (6 mm) or larger.

☐ If the tire has any sidewall damage.

☐ If the tire has any damage from driving with extremely low tire pressure.

WARNING! (Continued)

☐ If the tire has any damage from driving on a flat tire.

☐ If the wheel has any damage.

☐ If you are unsure of the condition of the tire or the wheel.

☐ Keep Tire Service Kit away from open flames or heat sources.

☐ A loose Tire Service Kit thrown forward in a collision or hard stop could endanger the occupants of the vehicle. Always stow the Tire Service Kit in the place provided. Failure to follow these warnings can result in injuries that are serious or fatal to you, your passengers, and others around you.

☐ Take care not to allow the contents of Tire Service Kit to come in contact with hair, eyes, or clothing. Tire Service Kit sealant is harmful if inhaled, swallowed, or absorbed through the skin. It causes skin, eye, and respiratory irritation. Flush immediately with plenty of water if there is any contact with eyes or skin. Change clothing as soon as possible, if there is any contact with clothing.

WARNING! (Continued)

☐ Tire Service Kit Sealant solution contains latex. In case of an allergic reaction or rash, consult a physician immediately. Keep Tire Service Kit out of reach of children. If swallowed, rinse mouth immediately with plenty of water and drink plenty of water. Do not induce vomiting! Consult a physician immediately.

To use your Tire Service Kit, proceed as follows:

1. Apply the electric park brake.

2. Insert the sealant cartridge containing the sealing fluid in the proper compressor holder, pushing down hard. Unscrew the tire valve cap, take out the filler tube and tighten the fitting on the tire valve.

Attaching Filler Tube To Deflated Tire

1 — Sealant Cartridge
2 — Filler Tube
3. Make sure the power switch of the compressor is in the (off) O position.

4. Insert the plug into the power outlet in the center console, then start the engine.

5. Start the compressor by placing the power switch in the I (on) position.

6. Inflate the tire to the pressure indicated on the tire placard, located on the driver’s side B-Pillar or the rear edge of the driver’s side door. Refer to “Tires” in “Servicing And Maintenance” for more information. In order to obtain a more precise reading, check the pressure value on pressure gauge with the compressor off.

7. If the pressure is not at least 26.1 psi (1.8 bar) after 15 minutes, disengage the compressor from the valve and power outlet. Then, move the vehicle forwards approximately five tire turns in order to distribute the sealant inside the tire evenly, and then repeat the inflation operation.

8. If you still cannot obtain a pressure of at least 26 psi (1.8 bar) within 15 minutes of turning the compressor on, do not drive the vehicle, and contact an authorized dealer.

9. Drive the vehicle for about 5 miles (8 km), stop, apply the electric park brake, and recheck the tire pressure.

10. If the pressure is less than 26 psi (1.8 bar), **DO NOT** drive the vehicle, and see an authorized dealer.

11. If a pressure value of at least 26 psi (1.8 bar) is detected, restore the correct pressure (with engine running and electric park brake applied), and drive immediately with great care to an authorized dealer.

**WARNING!**

Tire Service Kit is not a permanent flat tire repair. Have the tire inspected and repaired or replaced after using Tire Service Kit. Do not exceed 50 mph (80 km/h) until the tire is repaired or replaced. Failure to follow this warning can result in injuries that are serious or fatal to you, your passengers, and others around you. Have the tire checked as soon as possible at an authorized dealer.

12. Apply the adhesive label from the sealant bottle where it can be easily seen by the driver as a reminder that the tire has been treated with a Tire Service Kit, as well as not to exceed the speed restriction for the treated tire.
Sealant Cartridge Replacement

NOTE:
Only use original cartridges, which can be purchased at an authorized dealer.

Proceed as follows:
1. Remove the sealant cartridge by pushing the release button located on the side of the compressor.
2. Insert the new sealant cartridge by pushing downward firmly.

JUMP STARTING

If your vehicle has a discharged battery, it can be jump started using a set of jumper cables and a battery in another vehicle, or by using a portable battery booster pack. Jump starting can be dangerous if done improperly, so please follow the procedures in this section carefully.

NOTE:
When using a portable battery booster pack, follow the manufacturer’s operating instructions and precautions.

WARNING!
Do not adhere the speed restriction sticker to the padded area on the steering wheel. Adhering the speed restriction sticker to the padded area on the steering wheel is dangerous because the air bag may not operate (deploy) normally resulting in serious injury. In addition, do not adhere the sticker to areas where warning lights or the speedometer cannot be viewed.

WARNING!
Do not attempt jump starting if the battery is frozen. It could rupture or explode and cause personal injury.

CAUTION!
Do not use a portable battery booster pack or any other booster source with a system voltage greater than 12 Volts or damage to the battery, starter motor, alternator or electrical system may occur.

Remote Battery Connection Posts

The remote posts of the battery for jump starting can be found inside the engine compartment. The battery, on the other hand, is located in the luggage compartment.
Models With 2.0 T4 MAir Engine

The negative remote post (-) is positioned next to the passenger side hood lock inside the engine compartment.

The positive post (+) can be accessed by removing the cover, and opening the protective flap.

**WARNING!**

Do not connect the jumper cable to the negative (-) post of the discharged battery. The resulting electrical spark could cause the battery to explode and could result in serious injury. Only use the specific ground point, do not use any other exposed metal parts.

To carry out the operation, you need to have the correct cables to connect to the battery of another vehicle or a portable battery booster pack to the remote posts of the discharged battery. Usually, these cables have terminals at the ends and are identified by different sheath colors (red = positive, black = negative).
**IN CASE OF EMERGENCY**

**Quadrifoglio Model**

The negative terminal (-) is positioned next to the passenger side hood lock.

The positive post (+) can be accessed by lifting the protective flap.

---

**Remote Post Location**

**WARNING!**

Do not connect the jumper cable to the negative (-) post of the discharged battery. The resulting electrical spark could cause the battery to explode and could result in serious injury. Only use the specific ground point, do not use any other exposed metal parts.

---

**Remote Post Location**

**Jump Starting**

**WARNING!**

Failure to follow this jump starting procedure could result in personal injury or property damage due to battery explosion.

**CAUTION!**

Failure to follow these procedures could result in damage to the charging system of the booster vehicle or the discharged vehicle.

**Preparation For Jump Starting:**

1. Firmly apply the park brake, and cycle the ignition to OFF.
2. Turn off all electrical features in the vehicle.
3. If using another vehicle to jump start the battery, park the vehicle within the jumper cables reach, apply the park brake and make sure the ignition is OFF.

**WARNING!**

Do not allow vehicles to touch each other as this could establish a ground connection and personal injury could result.
Cable Connection

Proceed as follows to perform a jump starting procedure:

1. Connect the positive (+) end of the jumper cable to the positive (+) post of the vehicle with the discharged battery.
2. Connect the opposite end of the positive (+) jumper cable to the positive (+) post of the booster battery.
3. Connect the negative end (-) of the jumper cable to the negative (-) post of the booster battery.
4. Connect the opposite end of the negative (-) jumper cable to the remote negative (-) post of the discharged vehicle.
5. Start the engine in the vehicle that has the booster battery, let the engine idle a few minutes, and then start the engine in the vehicle with the discharged battery. If using a portable battery booster pack, before starting the vehicle, wait a few seconds after completing the connection.

Cable Disconnection

Once the engine is started, remove the connection cables in reverse sequence, as described below:

1. Disconnect the negative (-) jumper cable from the remote negative (-) post of the discharged vehicle.
2. Disconnect the negative end (-) of the jumper cable from the negative (-) post of the booster battery.
3. Disconnect the opposite end of the positive (+) jumper cable from the positive (+) post of the booster battery.
4. Disconnect the positive (+) end of the jumper cable from the positive (+) post of the vehicle with the discharged battery.

If frequent jump starting is required to start your vehicle, you should have the battery and charging system inspected at an authorized dealer.

CAUTION!

Accessories plugged into the vehicle power outlets draw power from the vehicle's battery, even when not in use (i.e., cellular phones, etc.). Eventually, if plugged in long enough without engine operation, the vehicle's battery will discharge sufficiently to degrade battery life and/or prevent the engine from starting.

REFUELING IN EMERGENCY

Refueling in an emergency is described in "Refueling The Vehicle" in "Starting And Operating".

TOWING A DISABLED VEHICLE

This section describes procedures for towing a disabled vehicle using a commercial towing service.

For information on contacting emergency service personnel, refer to "Roadside Assistance" in this chapter.
The operators of the assistance vehicle must be informed with regard to the vehicle's minimum height from ground in order to avoid contact between the ends of the bumpers with the equipment of the breakdown truck.

The following image illustrates the front and rear attachment corners of the vehicle, to be taken into consideration when loading the vehicle on the assistance vehicle.

### Front And Rear Loading Angles

<table>
<thead>
<tr>
<th></th>
<th>RWD Models</th>
<th>AWD Models</th>
<th>Quadrifoglio Models</th>
</tr>
</thead>
<tbody>
<tr>
<td>A — Front Loading Angle</td>
<td>12.880°</td>
<td>15.160°</td>
<td>12.045°</td>
</tr>
<tr>
<td>B — Rear Loading Angle</td>
<td>17.105°</td>
<td>18.400°</td>
<td>11.830°</td>
</tr>
</tbody>
</table>

### Rear Wheel Drive (RWD) Models

It is recommended to tow the vehicle with all four wheels OFF the ground on the flatbed of a roadside assistance vehicle.

### All Wheel Drive (AWD) Models

It is recommended to tow the vehicle with all four wheels OFF the ground on the flatbed of a roadside assistance vehicle.

### CAUTION!

- Do not use sling-type equipment when towing. Vehicle damage may occur.
- When securing the vehicle to a flatbed truck, do not attach to front or rear suspension components. Damage to your vehicle may result from improper towing.
- Ensure that the Electric Park Brake is released, and remains released, while being towed.
- Damage from improper towing is not covered under the New Vehicle Limited Warranty.

### CAUTION! (Continued)

- When securing the vehicle to a flat bed truck, do not attach to front or rear suspension components. Damage to your vehicle may result from improper towing.
- Ensure that the Electric Park Brake is released, and remains released, while being towed.
- If an assistance vehicle with a flatbed is not available, the vehicle must be towed with the rear wheels lifted from the ground using a trailer or special equipment allowing lifting of the rear wheels.

### CAUTION! (Continued)

- DO NOT flat tow this vehicle. Damage to the drivetrain will result.
- DO NOT dolly tow this vehicle. Use of a towing dolly can cause significant damage to your vehicle.
- Towing this vehicle in violation of the above requirements can cause severe transmission damage. Damage from improper towing is not covered under the New Vehicle Limited Warranty.
TOW EYES

If the vehicle has been in an accident or has broken down, a tow eye is provided in the tools container located inside the luggage compartment for vehicle towing. There are two locations on the front bumper available for Tow Eye installation, and if equipped, one in the rear on the passenger side. Towing is meant only for short distances on a paved road surface.

Proceed as follows to use the tow eye:

1. Unhook the cap on the front (left or right side) or rear bumper, pushing on the upper part.

2. Remove the tow eye from its housing in the trunk and carefully clean the threaded housing on the vehicle before using it.

3. Tighten the vehicle's tow eye in place (about 11 turns).

NOTE:
The largest work angle of a tow cable to fix on the tow hook must not exceed 15°.

Work Angle Of Tow Cable

<tr>
<th>WARNING!</th>
</tr>
</thead>
<tbody>
<tr>
<td>Stand clear of vehicles when pulling with tow eyes.</td>
</tr>
<tr>
<td>Do not use a chain with a tow eye. Chains may break, causing serious injury or death.</td>
</tr>
<tr>
<td>Do not use a tow strap with a tow eye. Tow straps may break or become disengaged, causing serious injury or death.</td>
</tr>
<tr>
<td>Failure to follow proper tow eye usage may cause components to break resulting in serious injury or death.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>CAUTION!</th>
</tr>
</thead>
<tbody>
<tr>
<td>The tow eye must be used exclusively for roadside assistance operations. Only use the tow eye with an appropriate device in accordance with the highway code (a rigid bar or rope) to flat tow the vehicle for a short distance to the nearest service location.</td>
</tr>
<tr>
<td>Tow eyes MUST NOT be used to tow vehicles off the road or where there are obstacles.</td>
</tr>
</tbody>
</table>

Front Tow Eye Cap Locations

Rear Tow Eye Cap Location
IN CASE OF EMERGENCY

CAUTION! (Continued)

☐ In compliance with the above conditions, towing with a tow eye must take place with two vehicles (one towing, the other towed) aligned as much as possible along the same center line. Damage to your vehicle may occur if these guidelines are not followed.

☐ When towing, only use a facility that can tow vehicles with low ground clearances as extensive damage can result by using a standard tow truck platform.

ENHANCED ACCIDENT RESPONSE SYSTEM (EARS)

This vehicle is equipped with an Enhanced Accident Response System.

EVENT DATA RECORDER (EDR)

This vehicle is equipped with an Event Data Recorder (EDR). The main purpose of an EDR is to record data that will assist in understanding how a vehicle’s systems performed under certain crash or near crash-like situations, such as an air bag deployment or hitting a road obstacle.

Please refer to “Occupant Restraint Systems” in “Safety” for further information on the Event Data Recorder (EDR).
Correct servicing permits the performance of the vehicle to be maintained over time, as well as limited running costs and safeguarding the efficiency of the safety systems. This chapter explains how.

**SCHEDULED SERVICING**

Correct servicing is crucial for guaranteeing a long life for the vehicle under the best conditions.

For this reason, Alfa Romeo has planned a series of checks and services for your vehicle at fixed intervals based on distance and time, as described in the Scheduled Servicing Plan.

Before each service, it is always necessary to carefully follow the instructions in the Scheduled Servicing Plan (e.g. periodically check level of fluids, tire pressure, etc.).

Scheduled Servicing is offered by an authorized dealer according to a set time schedule. If, during each operation, in addition to the ones scheduled, the need arises for further replacements or repairs, these may be carried out with the owner’s explicit consent only.

**NOTE:** Scheduled Servicing intervals are required by the Manufacturer. Failure to have them carried out may invalidate the New Vehicle Limited Warranty.

You are advised to inform your authorized dealer of any small operating irregularities without waiting for the next service.

**Periodic Checks**

Every month or every 600 miles (1,000 km) or before long trips check and, if necessary, top off:

- Engine coolant level.
- Brake fluid level (if insufficient, see an authorized dealer as soon as possible).
- Windshield washer fluid level.
- Tire inflation pressure and condition.
- Operation of lighting system (headlights, direction indicators, hazard warning lights, etc.).
- Operation of windshield washing/wiping system and positioning/wear of wiper blades.

Every 2,000 miles (3,000 km), check and top off if required:

- Engine oil level.

**Heavy Usage Of The Vehicle**

If the vehicle is used under one of the following conditions:

- Dusty roads.
- Short, repeated journeys less than 4 miles (7-8 km) at sub-zero outside temperatures.
- Engine often idling or driving long distances at low speeds or long periods of inactivity.
- In the event of a long period of inactivity.

The following checks must be carried out more often than indicated in the Scheduled Servicing Plan:

- Check cleanliness of hood and trunk locks, cleanliness and lubrication of linkage.
- Visually inspect conditions of: engine, transmission, pipes and hoses (exhaust/fuel system/brakes) and rubber elements (sleeves/bushes, etc.).
- Check battery charge and battery fluid level (electrolyte).
- Visually inspect conditions of the accessory drive belts.
- Check and, if necessary, change engine oil and replace oil filter.
- Check and, if necessary, replace cabin air filter.
- Check and, if necessary, replace air cleaner.
Severe Duty All Models

Change Engine Oil at 4,000 miles (6,500 km) if the vehicle is operated in a dusty and off-road environment or is operated predominately at idle or only very low engine RPM’s. This type of vehicle use is considered Severe Duty.

Check battery charge status with the proper instrument.

Check tire condition/wear and adjust pressure, if necessary. Check the tire repair kit recharge condition and expiration date.

Check operation of lighting system (headlights, direction indicators, hazard warning lights, trunk lid, passenger compartment, glove compartment, instrument panel warning lights, etc.).

Check and, if necessary, top up fluid levels.¹

Check engine control system operation (via diagnostic tool).

Visually inspect conditions: exterior bodywork, underbody protection, pipes and hoses (exhaust, fuel system, brakes), rubber elements (sleeves, bushes, etc.).

Check position/wear of front windshield wiper blade.

Check operation of the windshield wiper/washer system and adjust nozzles, if necessary.

Check cleanliness of hood and luggage compartment locks, cleanliness and lubrication of linkage.

Visually inspect conditions and wear of front/rear disc brake pads and operation of pad wear indicators.
| Visually inspect the brake discs surface and edge. | ● ● ● ● ● ● ● ● ● ● ● ● ● ● ● |
| Brake pads/brake discs replacement. | 2 |
| Visually inspect the condition and tensioning of the accessory drive belt(s). | ● ● ● ● ● ● ● ● ● ● ● ● ● ● ● |
| Change engine coolant | ● |
| Change engine oil and replace oil filter. | ● ● ● ● ● ● ● ● ● ● ● ● ● ● ● |
| Replace accessory drive belt/s. | 3 |
| Replace air cleaner cartridge | 4 ● ● ● ● ● ● ● |
| Replace the additional fuel filter (if equipped). | ● ● ● ● ● ● ● ● ● ● ● ● ● ● ● |
| Change the brake fluid. | 5 |
| Replace the cabin air filter. | o ● o ● o ● o ● o ● o ● o ● o |
| Spark plug replacement | 6 ● ● ● ● ● ● ● |

1. Top up using the fluids indicated in the "Fluids And Lubricants" section of the "Technical Specifications" chapter only after checking that the system is intact.
2. The actual interval for changing the brake pads and the carbon ceramic brake discs depends on the vehicle usage conditions and is signaled by the warning light or message on the instrument panel. After each discs replacement, reset the warning light using the diagnostic socket.
3. Areas that are not dusty: recommended maximum mileage 36,000 miles (60,00 km). Regardless of the mileage, the belt must be replaced every 4 years. Dusty areas and/or demanding use of the vehicle (cold climates, town use, long periods of idling): advised maximum mileage 18,000 miles (30,000 km). Regardless of the mileage, the belt must be replaced every 2 years.
4. If the vehicle is used in dusty areas, this cleaner must be replaced every 10,000 miles (16,000 km).
5. The brake fluid replacement has to be done every two years, irrespective of the mileage.
6. The spark plug change interval is mileage-based only. Yearly intervals do not apply.

(●) Recommended operations
(●) Mandatory operations
**WARNING!**

- You can be badly injured working on or around a motor vehicle. Do only service work for which you have the knowledge and the right equipment. If you have any doubt about your ability to perform a service job, take your vehicle to a competent mechanic.

**WARNING! (Continued)**

- Failure to properly inspect and maintain your vehicle could result in a component malfunction and effect vehicle handling and performance. This could cause an accident.

- Failure to properly inspect and maintain your vehicle could result in a component malfunction and affect vehicle handling and performance. This could cause an accident.
ENGINE COMPARTMENT

Checking Levels

2.0 T4 MAir engine

1 – Engine Oil Filler
2 – Brake Fluid Reservoir Cap Access Cover
3 – Engine Coolant Reservoir Cap
4 – Windshield/Headlights Washer Fluid Reservoir Cap
5 – Intercooler Coolant Reservoir Cap
Quadrifoglio - 2.9 V6 engine

Engine Oil

The engine oil level can be seen on the instrument cluster display every time the engine is started, or on the Information and Entertainment system display by activating on the main menu (MENU button) the following functions in sequence: “Apps”; “My Car” and “Oil Level”.

Check on the display using the 6 notches that the oil level is between the MIN and MAX level: 1 notch MIN level, 6 notches MAX level.

If the oil level is close to or below the MIN mark, add oil gradually through the filler, (refer to “Top-up and oil level indication update on display” in this section) considering that each notch shown on the display corresponds to approximately 8.8 fl oz (250 ml).

The oil level can also be checked manually on 2.9L Quadrifoglio models.
NOTE:
Always reinstall the oil cap and tighten to proper torque whenever it is removed to add oil to engine. Never run the engine with cap removed this could cause oil to leak from engine.

Manual oil level checking procedure — 2.9L Quadrifoglio
Check that the oil level is between the MIN and MAX marks on dipstick, clean it with a lint-free cloth and reinsert it. Extract the dipstick again and check that the level is between the MIN and MAX marks.

Top-up and oil level indication update on display
If a engine oil top-off is needed, in order to ensure the correct indication of the oil level on the display, leave the car on flat ground with the engine running for approximately 5 minutes (temperature higher than 176°F (80°C)) and shut the engine off then proceed with the process below:
- 2.0T 4 MAir — start the engine again and idle it for about five minutes.
- 2.9L Quadrifoglio — Wait for five minutes, turn the ignition to the ON mode without starting the engine and wait for a few seconds.

NOTE:
If you have added the specified amount of oil and the indicator is not reading “Full”, please contact your authorized dealer.

Engine Coolant Fluid
If the level is too low, unscrew the cap of reservoir and add the fluid described in the "Technical Specifications" chapter.

CAUTION!
The oil level must never exceed the MAX mark.
If the MAX mark is exceeded MAX (last notch on the right turns red) after the fill-up, go to your authorized dealer as soon as possible to have the oil in excess removed.
Do not add oil with specifications different from those of the oil already in the engine. Used engine oil and oil filters contain substances which are harmful to the environment. To change the oil and filters, we advise you to contact your authorized dealer.

Washer Fluid For Windshield/Headlights
The windshield and headlights washer fluid reservoir has a telescopic filler.
If the level is too low, remove reservoir cap and lift the filler. Then, add the fluid described in the "Technical Specifications" chapter.

WARNING!
If the engine oil is being topped up, wait for the engine to cool down before loosening the filler cap, particularly for vehicles with aluminium cap (if equipped). WARNING: risk of burns!
NOTE: The headlight washing system will not work if the liquid level is low (as indicated by the symbol on the instrument cluster display). The windshield washer will keep working. On vehicles equipped with headlight washers, if equipped, there is a reference notch on the dipstick: ONLY the windshield/rear window washer operates with the level below this reference.

Brake Fluid
Check that the fluid is at the maximum level. If the fluid level in the tank is low, contact your authorized dealer to have the system checked.

Automatic Transmission Activation
System Oil
The transmission control oil level should only be checked at your authorized dealer.

Useful Advice For Extending The Life Of Your Battery
To avoid draining your battery and make it last longer, observe the following instructions:
☐ When you park the car, ensure that the doors and trunk are closed properly to prevent any lights from remaining on inside the passenger's compartment.
☐ Do not keep accessories (e.g. radio, hazard warning lights, etc.) switched on for a long time when the engine is not running.
☐ Before performing any operation on the electrical system, disconnect the negative battery cable.

If you wish to install electrical accessories after purchasing the car that require permanent electrical supply (e.g. alarm, etc.), or accessories which influence the electrical supply requirements, contact your authorized dealer, whose qualified staff will evaluate the overall electrical consumption.

CAUTION!
If the charge level remains under 50% for a long time, the battery may be damaged by sulphation, reducing its capacity and efficiency at start the vehicle. The battery is also more prone to the risk of freezing (at temperatures as high as 14°F (-10°C)).

NOTE: After the battery is disconnected, the steering must be initialized. The warning light on the instrument panel switches on to indicate this. To carry out this procedure, simply turn the steering wheel all the way from one end to the other, and then turn it back to the central position.

Battery
The battery does not require the electrolyte to be topped up with distilled water. A periodic check carried out at an authorized dealer, however, is necessary to check efficiency.

Follow the battery manufacturer's instructions for maintenance.

Replacing The Battery
If necessary, replace the battery with another original battery with the same specifications. Follow the battery manufacturer’s instructions for maintenance.

WARNING!
☐ Battery acid is a corrosive solution and can burn or even blind you. Do not allow battery acid to contact your eyes, skin, or clothing. Do not lean over a battery when attaching clamps. If acid splashes in eyes or on skin, flush the area immediately with large amounts of water. Refer to “Jump Starting” in “In Case Of Emergency” for further information.
☐ Battery gas is flammable and explosive. Keep flame or sparks away from the battery. Do not use a booster battery or any other booster source with an output greater than 12 Volts. Do not allow cable clamps to touch each other.
NOTE:
It will not be possible to open the trunk with a key or by pressing the button in the passenger compartment when the battery is disconnected. So, always position the manual trunk opening strap on the trunk lock before disconnecting the battery. The procedure is described in the "Storing The Vehicle" paragraph in this chapter.

BATTERY RECHARGING

Important Notes

WARNING! (Continued)

- Battery posts, terminals, and related accessories contain lead and lead compounds. Wash hands after handling.

- Never charge or recharge a frozen battery: it may explode because of the nitrogen trapped inside the ice crystals.

- At all times while charging or recharging the battery, make sure that any sparks or open flames are kept sufficiently far away from the battery.

NOTE:
- Before using the charging device, always make sure that it is appropriate for the installed battery, with constant voltage (below 14.8 V) and low amperage (maximum 15 A).

- Recharge the battery in a well ventilated environment.

- Before using any devices to charge or to maintain the charge of the battery, carefully follow the instructions provided with the device in order to properly and safely connect it to the car battery.

You can recharge the battery without disconnecting the wires of the vehicle's electrical system.
- To reach the battery, remove the access panel inside the trunk.

The vehicle is equipped with an IBS (Intelligent Battery Sensor), which is able to measure the charge and discharge voltage and calculate the charge level and the general condition of the battery. The sensor is placed next to the negative terminal (-) of the battery.

- Connect the negative terminal of the charger (usually black) to nut next to the negative terminal (-) of the battery.

- Remove the protective cover and connect the positive cable terminal of the charger (usually red) to the positive terminal (+) of the battery.

WARNING! (Continued)

- Connect the negative terminal of the charger (usually black) to nut next to the negative terminal (-) of the battery.

- Remove the protective cover and connect the positive cable terminal of the charger (usually red) to the positive terminal (+) of the battery.

- Connect the negative terminal of the charger (usually black) to nut next to the negative terminal (-) of the battery.

- Remove the protective cover and connect the positive cable terminal of the charger (usually red) to the positive terminal (+) of the battery.
For a correct charge/discharge procedure, the charge voltage must go through the IBS sensor.

1. Turn the charger on and follow the instructions on the user’s manual to completely recharge the battery.

2. When the battery is charged, turn the charger off before disconnecting it from the battery.

3. Disconnect the black cable terminal of the battery charger and then the red cable terminal.

4. Refit the protective cover of the positive terminal of the battery and the access cover to the battery compartment.

**NOTE:**
If a "quick-type" battery charger is used with the battery fitted on the vehicle, before connecting it disconnect both cables of the battery itself. Do not use a "quick-type" battery charger to provide the starting voltage.

**DEALER SERVICE**

The following pages contain instructions on the required maintenance from the technical personnel who designed the vehicle.

In addition to these specific maintenance instructions specified for routine scheduled servicing, there are other components which may require periodic maintenance or replacement over the vehicle’s life cycle.

**Air Conditioning System Maintenance**

To ensure the best possible performance, the air conditioning system must be checked and undergo maintenance at an authorized dealer at the beginning of the summer.

**Windshield Wiper**

**Raising The Windshield Wiper Blades ("Service Position" Function)**

The "service position" function allows the driver to replace the windshield wiper blades more easily. It is also recommended to activate this function when it is snowing and to make it easier to remove any dirt deposits in the area where the blades are normally positioned, when washing.

**Activation Of The Function**

To activate this function disable the windshield wiper before setting the ignition device to STOP.

This function can only be activated within 2 minutes of cycling the ignition to STOP.

To activate this function, move the lever upwards for at least three seconds.

Windshield Wiper Stalk

**Function Deactivation**

The function is deactivated if:

- More than two minutes passes before cycling the ignition to the STOP position after having raised the lever and putting the wipers into service position.

- The ignition is cycled to the ON position, and the windshield wiper control is used.

If, after using the function, the ignition is set back to ON with the blades in a position other than rest position (at the base of the windshield), they will only return to rest position following a command given using the stalk (stalk upwards, into unstable position) or when a speed of 3 mph (5 km/h) is exceeded.
Replacing The Windshield Wiper Blades

Proceed as follows:

1. Raise the wiper arm, press tab of the attachment spring and remove the blade from the arm.

2. Fit the new blade, inserting the tab in the dedicated housing in the arm and checking that it is locked.

3. Lower the wiper arm onto the windshield.

NOTE:
Do not operate the windshield wiper with the blades lifted from the windshield.

Windshield Washer

The window washer nozzles are fixed. If there is no jet of fluid, first check that there is fluid in the reservoir (see paragraph “Engine Compartment” in this chapter).

Tire Markings

1 — U.S. DOT Safety Standards Code (TIN)
2 — Size Designation
3 — Service Description
4 — Maximum Load
5 — Maximum Pressure
6 — Treadwear, Traction and Temperature Grades

NOTE:

- P (Passenger) — Metric tire sizing is based on U.S. design standards. P-Metric tires have the letter “P” molded into the sidewall preceding the size designation. Example: P215/65R15 95H.

- European — Metric tire sizing is based on European design standards. Tires designed to this standard have the tire size molded into the sidewall beginning with...
the section width. The letter "P" is absent from this tire size designation. Example: 215/65R15 96H.

- **LT (Light Truck)** — Metric tire sizing is based on U.S. design standards. The size designation for LT-Metric tires is the same as for P-Metric tires except for the letters "LT" that are molded into the sidewall preceding the size designation. Example: LT235/85R16.

- Temporary spare tires are designed for temporary emergency use only. Temporary high pressure compact spare tires have the letter "T" or "S" molded into the sidewall preceding the size designation. Example: T145/80D18 103M.

- High flotation tire sizing is based on U.S. design standards and it begins with the tire diameter molded into the sidewall. Example: 31x10.5 R15 LT.

### Tire Sizing Chart

<table>
<thead>
<tr>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>P</strong> = Passenger car tire size based on U.S. design standards, or &quot;....blank....&quot; = Passenger car tire based on European design standards, or <strong>LT</strong> = Light truck tire based on U.S. design standards, or <strong>T</strong> or <strong>S</strong> = Temporary spare tire or <strong>31</strong> = Overall diameter in inches (in) <strong>215, 235, 145</strong> = Section width in millimeters (mm) <strong>65, 85, 80</strong> = Aspect ratio in percent (%) <strong>10.5</strong> = Section width in inches (in) <strong>R</strong> = Construction code <strong>&quot;R&quot;</strong> means radial construction, or <strong>&quot;D&quot;</strong> means diagonal or bias construction <strong>15, 16, 18</strong> = Rim diameter in inches (in) <strong>95</strong> = Load Index <strong>A</strong> numerical code associated with the maximum load a tire can carry</td>
</tr>
</tbody>
</table>
Tire Identification Number (TIN)

The TIN may be found on one or both sides of the tire; however, the date code may only be on one side. Tires with white sidewalls will have the full TIN, including the date code, located on the white sidewall side of the tire. Look for the TIN on the outboard side of black sidewall tires as mounted on the vehicle. If the TIN is not found on the outboard side, then you will find it on the inboard side of the tire.

**EXAMPLE:**

<table>
<thead>
<tr>
<th>H = Speed Symbol</th>
</tr>
</thead>
<tbody>
<tr>
<td>□ A symbol indicating the range of speeds at which a tire can carry a load corresponding to its load index under certain operating conditions</td>
</tr>
<tr>
<td>□ The maximum speed corresponding to the speed symbol should only be achieved under specified operating conditions (i.e., tire pressure, vehicle loading, road conditions, and posted speed limits)</td>
</tr>
</tbody>
</table>

**Load Identification:**

Absence of the following load identification symbols on the sidewall of the tire indicates a Standard Load (SL) tire:

- **XL** = Extra load (or reinforced) tire, or
- **LL** = Light load tire or
- **C, D, E, F, G** = Load range associated with the maximum load a tire can carry at a specified pressure

**Maximum Load** – Maximum load indicates the maximum load this tire is designed to carry

**Maximum Pressure** – Maximum pressure indicates the maximum permissible cold tire inflation pressure for this tire

**Tire Identification Number (TIN)**

The TIN may be found on one or both sides of the tire; however, the date code may only be on one side. Tires with white sidewalls will have the full TIN, including the date code, located on the white sidewall side of the tire. Look for the TIN on the outboard side of black sidewall tires as mounted on the vehicle. If the TIN is not found on the outboard side, then you will find it on the inboard side of the tire.

**EXAMPLE:**

<table>
<thead>
<tr>
<th>DOT L9 ABCD 0301</th>
</tr>
</thead>
<tbody>
<tr>
<td>□ DOT = Department of Transportation</td>
</tr>
<tr>
<td>□ This symbol certifies that the tire is in compliance with the U.S. Department of Transportation tire safety standards and is approved for highway use</td>
</tr>
<tr>
<td>□ MA = Code representing the tire manufacturing location (two digits)</td>
</tr>
<tr>
<td>□ L9 = Code representing the tire size (two digits)</td>
</tr>
</tbody>
</table>
Tire Terminology And Definitions

<table>
<thead>
<tr>
<th>Term</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>ABCD = Code used by the tire manufacturer (one to four digits)</td>
<td></td>
</tr>
<tr>
<td>03 = Number representing the week in which the tire was manufactured (two digits)</td>
<td></td>
</tr>
<tr>
<td>03 means the 3rd week</td>
<td></td>
</tr>
<tr>
<td>01 = Number representing the year in which the tire was manufactured (two digits)</td>
<td></td>
</tr>
<tr>
<td>01 means the year 2001</td>
<td></td>
</tr>
<tr>
<td>Prior to July 2000, tire manufacturers were only required to have one number to represent the year in which the tire was manufactured.</td>
<td>Example: 031 could represent the 3rd week of 1981 or 1991</td>
</tr>
</tbody>
</table>

Example: 031 could represent the 3rd week of 1981 or 1991

Tire Placard: A label permanently attached to the vehicle describing the vehicle's loading capacity, the original equipment tire sizes and the recommended cold tire inflation pressures.
**Tire Loading And Tire Pressure**

**NOTE:**
The proper cold tire inflation pressure is listed on the driver's side B-Pillar or the rear edge of the driver's side door.

Check the inflation pressure of each tire, including the spare tire (if equipped), at least monthly and inflate to the recommended pressure for your vehicle.

**Example Tire Placard Location (B-Pillar)**

**Tire And Loading Information Placard**

This placard tells you important information about the:
1. Number of people that can be carried in the vehicle.
2. Total weight your vehicle can carry.
3. Tire size designed for your vehicle.
4. Cold tire inflation pressures for the front, rear, and spare tires.

**Loading**
The vehicle maximum load on the tire must not exceed the load carrying capacity of the tire on your vehicle. You will not exceed the tire's load carrying capacity if you adhere to the loading conditions, tire size, and cold tire inflation pressures specified on the Tire and Loading Information placard in “Vehicle Loading” in the “Starting And Operating” section of this manual.

**NOTE:**
Under a maximum loaded vehicle condition, gross axle weight ratings (GAWRs) for the front and rear axles must not be exceeded. For further information on GAWRs, vehicle loading, and trailer towing, refer to “Vehicle Loading” in the “Starting And Operating” section of this manual.

To determine the maximum loading conditions of your vehicle, locate the statement “The combined weight of occupants and cargo should never exceed XXX kg or XXX lbs” on the Tire and Loading Information placard. The combined weight of occupants, cargo/luggage and trailer tongue weight (if applicable) should never exceed the weight referenced here.
Steps For Determining Correct Load Limit—

1. Locate the statement “The combined weight of occupants and cargo should never exceed XXX kg or XXX lbs.” on your vehicle’s placard.

2. Determine the combined weight of the driver and passengers that will be riding in your vehicle.

3. Subtract the combined weight of the driver and passengers from XXX kg or XXX lbs.

4. The resulting figure equals the available amount of cargo and luggage load capacity. For example, if “XXX” amount equals 1400 lbs. and there will be five 150 lb passengers in your vehicle, the amount of available cargo and luggage load capacity is 650 lbs. (1400-750 (5x150) = 650 lbs.)

5. Determine the combined weight of luggage and cargo being loaded on the vehicle. That weight may not safely exceed the available cargo and luggage load capacity calculated in Step 4.

6. If your vehicle will be towing a trailer, load from your trailer will be transferred to your vehicle. Consult this manual to determine how this reduces the available cargo and luggage load capacity of your vehicle.

**NOTE:**

- If your vehicle will be towing a trailer, load from your trailer will be transferred to your vehicle. The following table shows examples on how to calculate total load, cargo/luggage, and towing capacities of your vehicle with varying seating configurations and number and size of occupants. This table is for illustration purposes only and may not be accurate for the seating and load carry capacity of your vehicle.

- For the following example, the combined weight of occupants and cargo should never exceed 865 lbs (392 kg).

**Metric Example For Load Limit**

For example, if “XXX” amount equals 635 kg and there will be five 68 kg passengers in your vehicle, the amount of available cargo and luggage load capacity is 295 kg (635-340 (5x68) = 295 kg) as shown in step 4.
WARNING!

Overloading of your tires is dangerous. Overloading can cause tire failure, affect vehicle handling, and increase your stopping distance. Use tires of the recommended load capacity for your vehicle. Never overload them.
Tires — General Information

Tire Pressure
Proper tire inflation pressure is essential to the safe and satisfactory operation of your vehicle. Four primary areas are affected by improper tire pressure:
- Safety and Vehicle Stability
- Economy
- Tread Wear
- Ride Comfort

Safety

WARNING!
- Improperly inflated tires are dangerous and can cause collisions.
- Underinflation increases tire flexing and can result in overheating and tire failure.

WARNING! (Continued)
- Overinflation reduces a tire's ability to cushion shock. Objects on the road and chuckholes can cause damage that result in tire failure.
- Overinflated or underinflated tires can affect vehicle handling and can fail suddenly, resulting in loss of vehicle control.
- Unequal tire pressures can cause steering problems. You could lose control of your vehicle.
- Unequal tire pressures from one side of the vehicle to the other can cause the vehicle to drift to the right or left.
- Always drive with each tire inflated to the recommended cold tire inflation pressure.

Both under-inflation and over-inflation affect the stability of the vehicle and can produce a feeling of sluggish response or over responsiveness in the steering.

NOTE:
- Unequal tire pressures from side to side may cause erratic and unpredictable steering response.
- Unequal tire pressure from side to side may cause the vehicle to drift left or right.

Fuel Economy
Underinflated tires will increase tire rolling resistance resulting in higher fuel consumption.

Tread Wear
Improper cold tire inflation pressures can cause abnormal wear patterns and reduced tread life, resulting in the need for earlier tire replacement.

Ride Comfort And Vehicle Stability
Proper tire inflation contributes to a comfortable ride. Over-inflation produces a jarring and uncomfortable ride.

Tire Inflation Pressures
The proper cold tire inflation pressure is listed on the driver's side B-Pillar or rear edge of the driver's side door.

At least once a month:
- Check and adjust tire pressure with a good quality pocket-type pressure gauge. Do not make a visual judgement when determining proper inflation. Tires may look properly inflated even when they are under-inflated.
- Inspect tires for signs of tire wear or visible damage.
Inflation pressures specified on the placard are always “cold tire inflation pressure”. Cold tire inflation pressure is defined as the tire pressure after the vehicle has not been driven for at least three hours, or driven less than 1 mile (1.6 km) after sitting for a minimum of three hours. The cold tire inflation pressure must not exceed the maximum inflation pressure molded into the tire sidewall.

Check tire pressures more often if subject to a wide range of outdoor temperatures, as tire pressures vary with temperature changes.

Tire pressures change by approximately 1 psi (7 kPa) per 12°F (7°C) of air temperature change. Keep this in mind when checking tire pressure inside a garage, especially in the Winter.

Example: If garage temperature = 68°F (20°C) and the outside temperature = 32°F (0°C) then the cold tire inflation pressure should be increased by 3 psi (21 kPa), which equals 1 psi (7 kPa) for every 12°F (7°C) for this outside temperature condition.

Tire pressure may increase from 2 to 6 psi (13 to 40 kPa) during operation. DO NOT reduce this normal pressure build up or your tire pressure will be too low.

**Tire Pressures For High Speed Operation**

The manufacturer advocates driving at safe speeds and within posted speed limits. Where speed limits or conditions are such that the vehicle can be driven at high speeds, maintaining correct tire inflation pressure is very important. Increased tire pressure and reduced vehicle loading may be required for high-speed vehicle operation. Refer to an authorized tire dealer or original equipment vehicle dealer for recommended safe operating speeds, loading and cold tire inflation pressures.

**Radial Ply Tires**

Combining radial ply tires with other types of tires on your vehicle will cause your vehicle to handle poorly. The instability could cause a collision. Always use radial ply tires in sets of four. Never combine them with other types of tires.

**Tire Repair**

If your tire becomes damaged, it may be repaired if it meets the following criteria:

- The tire has not been driven on when flat.
- The damage is only on the tread section of your tire (sidewall damage is not repairable).
- The puncture is no greater than a ¼ of an inch (6 mm).

Consult an authorized tire dealer for tire repairs and additional information.

Damaged Run Flat tires, or Run Flat tires that have experienced a loss of pressure should be replaced immediately with another Run Flat tire of identical size and service description (Load Index and Speed Symbol). Replace the tire pressure sensor as well as it is not designed to be reused.

**CAUTION!**

After inspecting or adjusting the tire pressure, always reinstall the valve stem cap. This will prevent moisture and dirt from entering the valve stem, which could damage the valve stem.

**WARNING!**

High speed driving with your vehicle under maximum load is dangerous. The added strain on your tires could cause them to fail. You could have a serious collision. Do not drive a vehicle loaded to the maximum capacity at continuous speeds above 75 mph (120 km/h).
Run Flat Tires — If Equipped

Run Flat tires allow you the capability to drive 50 miles (80 km) at 50 mph (80 km/h) after a rapid loss of inflation pressure. This rapid loss of inflation is referred to as the Run Flat mode. A Run Flat mode occurs when the tire inflation pressure is 14 psi (96 kPa). Once a Run Flat tire reaches the run flat mode it has limited driving capabilities and needs to be replaced immediately. A Run Flat tire is not repairable. When a run flat tire is changed after driving with underinflated tire condition, please replace the TPM sensor as it is not designed to be reused when driven under run flat mode (14 psi (96 kPa)) condition.

NOTE:
TPM Sensor must be replaced after driving the vehicle on a flat tire condition.

It is not recommended driving a vehicle loaded at full capacity or to tow a trailer while a tire is in the run flat mode.

See the tire pressure monitoring section for more information.

Tire Spinning

When stuck in mud, sand, snow, or ice conditions, do not spin your vehicle’s wheels above 30 mph (48 km/h) or for longer than 30 seconds continuously without stopping.

WARNING!

Fast spinning tires can be dangerous. Forces generated by excessive wheel speeds may cause tire damage or failure. A tire could explode and injure someone. Do not spin your vehicle’s wheels faster than 30 mph (48 km/h) for more than 30 seconds continuously when you are stuck, and do not let anyone near a spinning wheel, no matter what the speed.

Tread Wear Indicators

Tread wear indicators are in the original equipment tires to help you in determining when your tires should be replaced.

Tire Tread

1 — Worn Tire
2 — New Tire

These indicators are molded into the bottom of the tread grooves. They will appear as bands when the tread depth becomes a 1/16 of an inch (1.6 mm). When the tread is worn to the tread wear indicators, the tire should be replaced.

Refer to “Replacement Tires” in this section for further information.

Life Of Tire

The service life of a tire is dependent upon varying factors including, but not limited to:

- Driving style.
- Tire pressure - Improper cold tire inflation pressures can cause uneven wear patterns to develop across the tire tread. These abnormal wear patterns will reduce tread life, resulting in the need for earlier tire replacement.
- Distance driven.
- Performance tires, tires with a speed rating of V or higher, and Summer tires typically have a reduced tread life. Rotation of these tires per the vehicle scheduled maintenance is highly recommended.

WARNING!

Tires and the spare tire should be replaced after six years, regardless of the remaining tread. Failure to follow this warning can result in sudden tire failure. You could lose control and have a collision resulting in serious injury or death.
NOTE:
Wheel Valve Stem must be replaced as well when installing new tires due to wear and tear in existing tires.

Keep dismounted tires in a cool, dry place with as little exposure to light as possible. Protect tires from contact with oil, grease, and gasoline.

Replacement Tires
The tires on your new vehicle provide a balance of many characteristics. They should be inspected regularly for wear and correct cold tire inflation pressures. The manufacturer strongly recommends that you use tires equivalent to the originals in size, quality and performance when replacement is needed. Refer to the paragraph on “Tread Wear Indicators” in this section. Refer to the Tire and Loading Information placard or the Vehicle Certification Label for the size designation of your tire. The Load Index and Speed Symbol for your tire will be found on the original equipment tire sidewall.

See the Tire Sizing Chart example found in the “Tire Safety Information” section of this manual for more information relating to the Load Index and Speed Symbol of a tire.

It is recommended to replace the two front tires or two rear tires as a pair. Replacing just one tire can seriously affect your vehicle’s handling. If you ever replace a wheel, make sure that the wheel’s specifications match those of the original wheels.

It is recommended you contact an authorized tire dealer or original equipment dealer with any questions you may have on tire specifications or capability. Failure to use equivalent replacement tires may adversely affect the safety, handling, and ride of your vehicle.

WARNING!
□ Do not use a tire, wheel size, load rating, or speed rating other than that specified for your vehicle. Some combinations of unapproved tires and wheels may change suspension dimensions and performance characteristics, resulting in changes to steering, handling, and braking of your vehicle. This can cause unpredictable handling and stress to steering and suspension components. You could lose control and have a collision resulting in serious injury or death. Use only the tire and wheel sizes with load ratings approved for your vehicle.

□ Never use a tire with a smaller load index or capacity, other than what was originally equipped on your vehicle. Using a tire with a smaller load index could result in tire overloading and failure. You could lose control and have a collision.

WARNING! (Continued)
□ Failure to equip your vehicle with tires having adequate speed capability can result in sudden tire failure and loss of vehicle control.

CAUTION!
Replacing original tires with tires of a different size may result in false speedometer and odometer readings.

Spare Tires – If Equipped
NOTE:
For vehicles equipped with Tire Service Kit instead of a spare tire, please refer to “Tire Service Kit” in “In Case Of Emergency” in the Owner’s Manual for further information.

CAUTION!
Because of the reduced ground clearance, do not take your vehicle through an automatic car wash with a compact or limited use temporary spare installed. Damage to the vehicle may result.

Refer to the “Towing Requirements - Tires” in “Starting And Operating” in the Owner’s Manual for restrictions when towing with a spare tire designated for temporary emergency use.
Spare Tire Matching Original Equipped Tire And Wheel — If Equipped

Your vehicle may be equipped with a spare tire and wheel equivalent in look and function to the original equipment tire and wheel found on the front or rear axle of your vehicle. This spare tire may be used in the tire rotation for your vehicle. If your vehicle has this option, refer to an authorized tire dealer for the recommended tire rotation pattern.

Compact Spare Tire — If Equipped

The compact spare is for temporary emergency use only. You can identify if your vehicle is equipped with a compact spare by looking at the spare tire description on the Tire and Loading Information Placard located on the driver’s side door opening or on the sidewall of the tire. Compact spare tire descriptions begin with the letter “T” or “S” preceding the size designation. Example: T145/80D18 103M.

T, S = Temporary Spare Tire

Since this tire has limited tread life, the original equipment tire should be repaired (or replaced) and reinstalled on your vehicle at the first opportunity.

Do not install a wheel cover or attempt to mount a conventional tire on the compact spare wheel, since the wheel is designed specifically for the compact spare tire. Do not install more than one compact spare tire and wheel on the vehicle at any given time.

WARNING!

Compact and collapsible spares are for temporary emergency use only. With these spares, do not drive more than 50 mph (80 km/h). Temporary use spares have limited tread life. When the tread is worn to the tread wear indicators, the temporary use spare tire needs to be replaced. Be sure to follow the warnings, which apply to your spare. Failure to do so could result in spare tire failure and loss of vehicle control.

Full Size Spare — If Equipped

The full size spare is for temporary emergency use only. This tire may look like the originally equipped tire on the front or rear axle of your vehicle, but it is not. This spare tire may have limited tread life. When the tread is worn to the tread wear indicators, the temporary use full size spare tire needs to be replaced. Since it is not the same as your original equipment tire, replace (or repair) the original equipment tire and reinstall on the vehicle at the first opportunity.

Limited Use Spare — If Equipped

The limited use spare tire is for temporary emergency use only. This tire is identified by a label located on the limited use spare wheel. This label contains the driving limitations for this spare. This tire may look like the original equipped tire on the front or rear axle of your vehicle, but it is not. Installation of this limited use spare tire affects vehicle handling. Since it is not the same as your original equipment tire, replace (or repair) the original equipment tire and reinstall on the vehicle at the first opportunity.

Wheel And Wheel Trim Care

All wheels and wheel trim, especially aluminum and chrome plated wheels, should be cleaned regularly using mild (neutral Ph) soap and water to maintain their luster and to prevent corrosion. Wash wheels with the same soap solution recommended for the body of the vehicle and remember to always
wash when the surfaces are not hot to the touch.

Your wheels are susceptible to deterioration caused by salt, sodium chloride, magnesium chloride, calcium chloride, etc., and other road chemicals used to melt ice or control dust on dirt roads. Use a soft cloth or sponge and mild soap to wipe away promptly. Do not use harsh chemicals or a stiff brush. They can damage the wheel's protective coating that helps keep them from corroding and tarnishing.

**CAUTION!**
Avoid products or automatic car washes that use acidic solutions or strong alkaline additives or harsh brushes. Many aftermarket wheel cleaners and automatic car washes may damage the wheel's protective finish. Such damage is not covered by the New Vehicle Limited Warranty. Only car wash soap is recommended.

When cleaning extremely dirty wheels including excessive brake dust, care must be taken in the selection of tire and wheel cleaning chemicals and equipment to prevent damage to the wheels. Select a non-abrasive, non-acidic cleaner for aluminum or chrome wheels.

**CAUTION!**
If you intend parking or storing your vehicle for an extended period after cleaning the wheels with wheel cleaner, drive your vehicle and apply the brakes to remove the water droplets from the brake components. This activity will remove the red rust on the brake rotors and prevent vehicle vibration when braking.

**Dark Or Low Gloss Wheels**

**CAUTION!**
If your vehicle is equipped with these specialty wheels, DO NOT USE wheel cleaners, abrasives, or polishing compounds. They will permanently damage this finish and such damage is not covered by the New Vehicle Limited Warranty. HAND WASH ONLY USING MILD SOAP AND WATER WITH A SOFT CLOTH. Used on a regular basis; this is all that is required to maintain this finish.

---

**Tire Types**

**All Season Tires — If Equipped**

All Season tires provide traction for all seasons (Spring, Summer, Fall, and Winter). Traction levels may vary between different all season tires. All season tires can be identified by the M+S, M&S, M/S or MS designation on the tire sidewall. Use all season tires only in sets of four; failure to do so may adversely affect the safety and handling of your vehicle.

**Summer Or Three Season Tires — If Equipped**

Summer tires provide traction in both wet and dry conditions, and are not intended to be driven in snow or on ice. If your vehicle is equipped with Summer tires, be aware these tires are not designed for Winter or cold driving conditions. Install Winter tires on your vehicle when ambient temperatures are less than 40°F (5°C) or if roads are covered with ice or snow. For more information, contact an authorized dealer.

Summer tires do not contain the all season designation or mountain/snowflake symbol on the tire sidewall. Use Summer tires only in sets of four; failure to do so may adversely affect the safety and handling of your vehicle.
Snow Tires

Some areas of the country require the use of snow tires during the Winter. Snow tires can be identified by a “mountain/snowflake” symbol on the tire sidewall.

If you need snow tires, select tires equivalent in size and type to the original equipment tires. Use snow tires only in sets of four; failure to do so may adversely affect the safety and handling of your vehicle.

Snow tires generally have lower speed ratings than what was originally equipped with your vehicle and should not be operated at sustained speeds over 75 mph (120 km/h). For speeds above 75 mph (120 km/h) refer to original equipment or an authorized tire dealer for recommended safe operating speeds, loading and cold tire inflation pressures.

While studded tires improve performance on ice, skid and traction capability on wet or dry surfaces may be poorer than that of non-studded tires. Some states prohibit studded tires; therefore, local laws should be checked before using these tire types.

Snow Chains

Rear Wheel Drive and All-Wheel Drive Models

9 mm snow chains can be used on all tires with a width equal to or less than 225mm (225/50 R17, 225/45 R18, 225/40 R19). 7 mm chains can be fitted to 255/35 R19 tires.

We recommend using snow chains available from your authorized dealer.

NOTE:

- The snow chains may be applied only to the rear wheel tires.
- Check the tension of the snow chains after the first few feet/meters have been driven.
- Using snow chains with tires with non-original dimensions may damage the vehicle.
- Using different size or type (M+S, snow, etc.) tires between front and rear axle may adversely affect vehicle driveability, with the risk of losing control of the vehicle and resulting accidents.

Quadrifoglio Models

It is only possible to put chains on the rear 265/35 R19 tire (winter tire size). Avoid using traditional chains as they can damage the braking system if not installed correctly, thereby compromising the vehicles safety.

We strongly advise using zero-clearance chains and to use equipment proposed by an authorized dealer.

DEPARTMENT OF TRANSPORTATION
UNIFORM TIRE QUALITY GRADES

The following tire grading categories were established by the National Highway Traffic Safety Administration. The specific grade rating assigned by the tire’s manufacturer in each category is shown on the sidewall of the tires on your vehicle.

All passenger vehicle tires must conform to Federal safety requirements in addition to these grades.

Treadwear

The Treadwear grade is a comparative rating, based on the wear rate of the tire when tested under controlled conditions on a specified government test course. For example, a tire graded 150 would wear one and one-half times as well on the government
course as a tire graded 100. The relative performance of tires depends upon the actual conditions of their use, however, and may depart significantly from the norm due to variations in driving habits, service practices, and differences in road characteristics and climate.

**Traction Grades**

The Traction grades, from highest to lowest, are AA, A, B, and C. These grades represent the tire's ability to stop on wet pavement, as measured under controlled conditions on specified government test surfaces of asphalt and concrete. A tire marked C may have poor traction performance.

**WARNING!**

The traction grade assigned to this tire is based on straight-ahead braking traction tests, and does not include acceleration, cornering, hydroplaning, or peak traction characteristics.

**Temperature Grades**

The temperature grades are A (the highest), B, and C, representing the tire's resistance to the generation of heat and its ability to dissipate heat, when tested under controlled conditions on a specified indoor laboratory test wheel. Sustained high temperature can cause the material of the tire to degenerate and reduce tire life, and excessive temperature can lead to sudden tire failure. The grade C corresponds to a level of performance, which all passenger vehicle tires must meet under the Federal Motor Vehicle Safety Standard No. 109. Grades B and A represent higher levels of performance on the laboratory test wheel, than the minimum required by law.

**WARNING!**

The temperature grade for this tire is established for a tire that is properly inflated and not overloaded. Excessive speed, under-inflation, or excessive loading, either separately or in combination, can cause heat buildup and possible tire failure.
For the enthusiasts, the technician, or those who just want to know every detail of their vehicle, useful information on understanding how your vehicle works is contained in this chapter and illustrated with data, tables, and graphics.

IDENTIFICATION DATA

Vehicle Identification Number

The Vehicle Identification Number (VIN) is stamped on a plate on the front left corner of the dashboard cover, which can be seen from outside the vehicle, through the windshield.

Vehicle Identification Number (VIN) Plate

The plates are located on the left side A pillar and contain the data about:

- Chassis number (VIN).
- Vehicle type (USA and Canada only).
- Color code.
- Place of manufacturing of the vehicle (USA and Mexico only).
- Vehicle manufacturing date.
- Maximum permitted weights.
- Permitted tire inflation pressure (USA and Canada only).

This number is also printed on the chassis at the front left shock absorber and can be seen by opening the engine compartment hood.
## ENGINE

</tr>
</tbody>
</table>

### CAUTION!
- Water, ice and salt spread on the roads may deposit on the brake discs, reducing braking efficiency the first time the brakes are applied.

### CAUTION! (Continued)
- To obtain the maximum efficiency of the braking system, a bedding-in period of about 300 miles (500 km) is needed: during this period it is better to avoid sharp, repeated and prolonged braking.

</table>

1. If special equipment is fitted (trailer towing equipment, etc.) the empty weight will increase and consequently the payload will decrease in relation to the maximum permitted loads.

2. Loads not to be exceeded. The user is responsible for arranging goods in the luggage compartment and/or on the load platform within the maximum permitted loads.

FUEL REQUIREMENTS

This engine is designed to meet all emission regulations, and provide satisfactory fuel economy and performance when using high-quality unleaded “Regular” gasoline having a posted octane number of 87 as specified by the (R+M)/2 method. For optimal performance the use of 91 or higher octane “Premium” gasoline is recommended in these engines.

While operating on gasoline with the required octane number, hearing a light knocking sound from the engine is not a cause for concern. However, if the engine is heard making a heavy knocking sound, see your dealer immediately. Use of gasoline with a lower than recommended octane number can cause engine failure and may void or not be covered by the New Vehicle Limited Warranty.

Poor quality gasoline can cause problems such as hard starting, stalling, and hesitations. If you experience these symptoms, try another brand of gasoline before considering service for the vehicle.

Materials Added To Fuel

Designated TOP TIER Detergent Gasoline contains a higher level of detergents to further aide in minimizing engine and fuel system deposits. When available, the usage of TOP TIER Detergent gasoline is recommended. Visit www.toptiergas.com for a list of TOP TIER Detergent Gasoline Retailers.

Indiscriminate use of fuel system cleaning agents should be avoided. Many of these materials intended for gum and varnish removal may contain active solvents or similar ingredients. These can harm fuel system gasket and diaphragm materials.

**FLUIDS AND LUBRICANTS**

Your vehicle is equipped with an engine oil that has been thoroughly developed and tested in order to meet the requirements of the Scheduled Servicing Plan. Constant use of the prescribed lubricants guarantees the fuel consumption and emission specifications. Lubricant quality is crucial for engine operation and durability.

### Engine Lubrication

<table>
<thead>
<tr>
<th>Use</th>
<th>Features</th>
<th>Specification</th>
<th>Replacement interval</th>
</tr>
</thead>
<tbody>
<tr>
<td>Lubricant for engines 2.9 V6</td>
<td>SAE 5W-40</td>

<td>Mopar API SN PLUS Certified SAE 0W-30 Full Synthetic Engine Oil</td>
<td>FCA Material Standards MS-13340</td>
<td>According to the Maintenance Plan</td>
</tr>
</tbody>
</table>

**CAUTION!**

Using lubricants that do not meet the recommended SN PLUS or equivalent oil specifications can cause engine damage not covered by the vehicle warranty.

If lubricants conforming to the requested specification are not available, products that meets indicated features can be used to top up; in this case optimal performance of the engine is not guaranteed.

* Based on manufacturer testing.
This chapter describes the main functions of the Information and Entertainment system NAV 6.5", Information and Entertainment System 3D NAV 8.8" system that can be equipped in your vehicle.

**CYBERSECURITY**

Your vehicle may be a connected vehicle and may be equipped with both wired and wireless networks. These networks allow your vehicle to send and receive information. This information allows systems and features in your vehicle to function properly.

Your vehicle may be equipped with certain security features to reduce the risk of unauthorized and unlawful access to vehicle systems and wireless communications. Vehicle software technology continues to evolve over time, and FCA US LLC, working with its suppliers, evaluates and takes appropriate steps as needed. Similar to a computer or other devices, your vehicle may require software updates to improve the usability and performance of your systems, or to reduce the potential risk of unauthorized and unlawful access to your vehicle systems.

The risk of unauthorized and unlawful access to your vehicle systems may still exist, even if the most recent version of vehicle software is installed.

**WARNING!**

- It is not possible to know or to predict all of the possible outcomes if your vehicle’s systems are breached. It may be possible that vehicle systems, including safety related systems, could be impaired or a loss of vehicle control could occur that may result in an accident involving serious injury or death.
- ONLY insert media (e.g., USB or SD card) into your vehicle if it came from a trusted source. Media of unknown origin could possibly contain malicious software, and if installed in your vehicle, it may increase the possibility for vehicle systems to be breached.
- As always, if you experience unusual vehicle behavior, take your vehicle to your nearest authorized dealer immediately.

**NOTE:**

- FCA US LLC or your dealer may contact you directly regarding software updates.
- To help further improve vehicle security and minimize the potential risk of a security breach, vehicle owners should:
  - Only connect and use trusted media devices (e.g. personal mobile phones or USBs).

Privacy of any wireless and wired communications cannot be assured. Third parties may unlawfully intercept information and private communications without your consent.

**ROAD SAFETY**

Learn how to use the various systems and read the instructions carefully before operating the system.

**WARNING!**

ALWAYS drive safely with your hands on the wheel. You have full responsibility and assume all risks related to the use of the features and applications in this vehicle. Only use these features and applications when it is safe to do so. Failure to do so may result in an accident involving serious injury or death.
RECEPTION CONDITIONS

Reception conditions change constantly while driving. There may be reception interference when near mountains, tall buildings, or bridges, especially when you are far away from the broadcaster.

NOTE:
The volume may change when receiving traffic information and news.

CARE AND MAINTENANCE

Observe the following precautions to ensure the system is fully operational:

- Avoid hitting the display lens with pointed or hard objects that could damage the surface.
- Clean with a damp cloth (microfiber if possible). If necessary, you can use a delicate mild soap and water solution, then dry with a soft, dry cloth. Do not apply pressure to the display lens while cleaning.
- Do not use alcohol, benzines and their derivatives, ammonia, solvents or other compounds to clean the display lens.
- Prevent any liquid from entering the system, as it could damage the system beyond repair.

ANTITHEFT PROTECTION

The system is equipped with an antitheft protection system based on the exchange of information with the electronic control unit (Body Computer) on the vehicle. This guarantees maximum safety and prevents the system from being used on other vehicles if it is stolen. If necessary contact an authorized dealer.

IMPORTANT NOTES

Only look at the screen when it is necessary and safe to do so. If you need to look at the screen for a long time, pull over to a safe place to avoid becoming distracted while driving.

Immediately stop using the system in the event of a fault, or you could damage the system. Contact an authorized dealer as soon as possible to have the system repaired.

CONTROLS

CONTROLS ON CONSOLE

### CONTROLS ON STEERING WHEEL

**DESCRIPTION**

The controls for the main system functions are present on the steering wheel to make control easier.

The function selected is controlled, in some cases, by the length of the push (short or long push). Each function is described in the table below.

---

**STEERING WHEEL CONTROL SUMMARY TABLE**

</tr>
</tbody>
</table>
**MEDIA SOURCE SELECTION**

The following settings are available in the “Audio” menu present in the Options menu (Option button):

- Bass
- Treble
- Mid
- Balance/Fade
- Speed Adjusted Volume
- Surround Sound
- AUX Volume Offset
- Restore Settings

**MEDIA MODE**

**NOTE:**
Applications used on portable devices may be not compatible with the Information and Entertainment System.

**Track Selection (Browse)**
With Media mode active, briefly press the Seek buttons to play the previous/next track or keep the Seek buttons pressed to fast rewind/forward the track.

**MEDIA MODE**

**NOTE:**
Applications used on portable devices may be not compatible with the Information and Entertainment System.

**Track Selection (Browse)**
With Media mode active, briefly press the Seek buttons to play the previous/next track or keep the Seek buttons pressed to fast rewind/forward the track.

**BLUETOOTH SOURCE**

**Pairing A Bluetooth Audio Device**

Proceed as follows:

1. Activate the Bluetooth function on the device.
2. Press the MENU button, and select the “SETTINGS” function by turning and pressing the Rotary Pad.
3. Select “Infotainment”.
4. Select “Bluetooth”.
5. Select “Add device”.
6. Search for the Information and Entertainment system on the Bluetooth audio device (during the pairing stage a screen is displayed showing the progress of the operation).
7. Select the device to be paired.
8. When requested by the audio device, enter the PIN code shown on the system display or confirm on the device the PIN displayed.
9. If the pairing procedure is completed successfully, a dedicated screen is displayed.
10. “Bluetooth” can be reached also by pressing the OPTION button in the PHONE or MEDIA functions. The MEDIA function can be selected by turning and pushing the Rotary Pad in the main menu (MENU button).

**NOTE:**
If the Bluetooth connection between mobile phone and system is lost, consult the mobile phone handbook.

**GENERAL INFORMATION**

The following regulatory statement applies to all Radio Frequency (RF) devices equipped in this vehicle:
This device complies with Part 15 of the FCC Rules and with Industry Canada license-exempt RSS standard(s). Operation is subject to the following two conditions:
☐ This device may not cause harmful interference, and
☐ This device must accept any interference received, including interference that may cause undesired operation.

NOTE:
Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

To comply with FCC RF exposure compliance requirements, the device must be installed to provide a separation distance of at least 20 cm (200 mm) from all persons.

USB/IPOD MODE

There are three USB ports located in your vehicle: one under the air conditioner control panel, one in the center console, and one (charge only) under the air vents on the back side of the center console. The AUX socket is located inside the glove compartment in the central console.

After using a USB recharging socket, we recommend disconnecting the device (smartphone). Always remove the cable from the vehicle socket first, never from the device. Cables left disconnected or connected incorrectly could compromise correct recharging and/or the USB socket condition.

NOTE:
The mobile phone audio is transmitted through the vehicle’s audio system; the system automatically mutes the system audio when the PHONE function is used.

PHONE MODE

PHONE mode can be activated from the main menu (MENU button) by turning and pushing the Rotary Pad.

Phone Mode

The following control bar appears on the display:
☐ Recent calls
☐ Favorites
☐ Contacts
☐ Dial
With call in progress:
☐ Disable Microphone
☐ End call

Pairing A Mobile Phone

Proceed as follows:
1. Activate the Bluetooth function on the device.
2. Press the MENU button, select the “SETTINGS” function by turning and pushing the Rotary Pad.
3. Select “Infotainment”.
4. Select Bluetooth.
5. Select “Add device”.
6. Search for the Information and Entertainment system on the Bluetooth audio device (during the pairing stage a screen is displayed showing the progress of the operation).
7. When requested by the audio device, enter the PIN code shown on the system display or confirm on the device the PIN displayed.
8. When the pairing procedure is completed successfully, a dedicated screen is displayed.
9. “Bluetooth” can be reached also by pressing the OPTION button in the PHONE or MEDIA functions. The latter can be selected by turning and pushing the Rotary Pad in the main menu (MENU button).

**Making A Phone Call**

Proceed as follows:
- Select the “Recent Calls” icon.
- Select the “Contacts” icon.
- Select the “Dial” icon.

**NAVIGATION MODE — IF EQUIPPED**

**NOTE:**
In the interest of safety and to reduce distractions while you are driving, you should always plan a route before you start driving.

To plan a route, do the following:
- Activate NAVIGATION mode by selecting it on the main menu.
- Activate the “Set destination” function.

To enter an address, select the item to add (Country, City). On the circular keypad, type the desired name, and the system automatically completes the word. The right of the display offers a list of options that apply to the entered letters. You can now either complete the word, or go to the list of suggestions by tapping the Rotary rightward, or by pointing to “OK”, and pushing the Rotary Pad.

Or
- Select an address from the “Recent destinations” list.
- Select an address from the “Favorite destinations” list.
- Once the desired destination has been set, select “Start navigation”.

With navigation started, select one of the following options using the control bar on the display:
- Stop Navigation: this allows to stop navigation.
- Navigation Volume Adjustment: this allows to set the volume of the messages.
- Edit Route: lets you refine your route choice, offering a series of options.
- Route Preview: this is used to see a preview of the planned route.
- Zoom: this allows to zoom into/out of the map.
- Point On Map: this allows to move inside the map.

**SETTINGS**

To access the user-programmable functions, open the main menu by pressing the MENU button, then select SETTINGS by turning and pushing the Rotary Pad.

The following menu items can be found within SETTINGS:
- Lights
- Units & Language
- Clock & Date
- Safety
- Driver Assistance
- Doors & Locks
- Cluster
- Infotainment
System

To access "Lights" settings, select it using the Rotary Pad. The following settings can be modified when this mode is selected:

- Headlight Sensitivity
- Headlight Off Delay
- Cornering Lights
- Flash Lights with Lock
- Daytime Running Lights
- Greeting Lights
- Interior Ambient Lights
- Automatic High Beam
- Restore Settings

Units & Language

To access "Units & Language" settings, select it using the Rotary Pad. The following settings can be modified when this mode is selected:

- Units
- Language
- Restore Settings

Clock & Date

To access "Clock & Date" settings, select it using the Rotary Pad. The following settings can be modified when this mode is selected:

- Sync with GPS Time
- Set Time
- Time Format
- Set Date
- Restore Settings

Safety

To access "Safety" settings, select it using the Rotary Pad. The following settings can be modified when this mode is selected:

- Speed Limiter
  
  This feature activates/deactivates the warning that indicates you have exceeded the set speed.

- Speed Limiter - Set Speed

This feature sets the desired speed limit value. By turning the Rotary Pad, the speed increases by 5 mph (5 km/h), per rotation, from a minimum of 20 mph (30 km/h) to a maximum of 110 mph (180 km/h).

Forward Collision Warning — If Equipped

This feature sets the type and sensitivity of the assistance features for the anti-collision system. The options available are:

- "Mode": used to set the following operating modes: Warning and Brake, Only Warning, or Disabled

- "Sensitivity": used to select desired distance of the obstacle (near, medium, or far) that the assistance features activate at.

Lane Departure Warning — If Equipped

This feature is used to select the readiness of the Lane Departure system to activate. The option available is:

- "Sensitivity": used to select the timing (early, or late) for when the assistance features activate.

 Blind Spot Monitoring — If Equipped

Used to activate/deactivate the sound warning that indicates that objects are detected in the blind spot of the exterior rear view mirrors.
Driver Assistance
To access “Driver Assistance” settings, select it using the Rotary Pad. The following settings can be modified when this mode is selected:

- ParkSense
  This feature is used to select the type of warning provided by the ParkSense system.

  The options available are:
  - “Mode”: the following options are available in this function: “Sound”, the system notifies the driver of the presence of an obstacle by means of sound. This sound warning can be heard from the speakers in the car. “Sound and Display”, the system notifies the driver of the presence of an obstacle by means of sound and visual signals on the instrument panel display.

- Parksense Volume: sets the volume of the sound warnings provided by the ParkSense system, the available options are: “High”, “Medium,” or “Low”.

- Rear View Camera
  This function can be used to carry out the following adjustments:

  - “View”: lets you activate the video camera on the display.

- Camera Delay: allows you to delay the camera from shutting off immediately when the vehicle is taken out of REVERSE.

- Camera Guidelines: allows you to activate the dynamic guidelines that appear on the display to indicate the route of the vehicle.

- Easy Entry — If Equipped
  This function can be used to carry out the following adjustments:

  - View: lets you activate the video camera on the display.

  - Camera Delay: allows you to delay the camera from shutting off immediately when the vehicle is taken out of REVERSE.

  - Camera Guidelines: allows you to activate the dynamic guidelines that appear on the display to indicate the route of the vehicle.

  - Easy Entry — If Equipped
    This function can be used to carry out the following adjustments:

    - View: lets you activate the video camera on the display.

    - Camera Delay: allows you to delay the camera from shutting off immediately when the vehicle is taken out of REVERSE.

    - Camera Guidelines: allows you to activate the dynamic guidelines that appear on the display to indicate the route of the vehicle.

- Automatic Parking Brake
  This function allows you to activate/deactivate the automatic parking brake activation, when the engine is turned off.

- Brake Service
  This function activates a vehicle mode that allows brake system servicing.

Doors & Locks
To access “Doors & Locks” settings, select it using the Rotary Pad. The following settings can be modified when this mode is selected:

- Door Lock in Motion
- Unlock All Doors on Exit
- Passive Entry
- Door Unlock on Entry
- Horn with Remote Start

- Sound Horn with Lock
- Restore Settings

Cluster
To access “Cluster” settings, select it using the Rotary Pad. The following settings can be modified when this mode is selected:

- Warning Buzzer Volume
- Trip A
- Trip B
- Phone Repeat
- Restore Settings

Infotainment
To access “Infotainment” settings, select it using the Rotary Pad. The following settings can be modified when this mode is selected:

- Screen Off
- Splitscreen (if equipped)
- Audio
- Bluetooth
- Radio
- Media
- Phone
- Navigation (if equipped)
- Apps
**System**

To access “System” settings, select it using the Rotary Pad. The following settings can be modified when this mode is selected:

- Auto-On Radio
- Switch-Off Delay
- Software Update
- Map Update
- Clear Personal Data
- Restore Settings

**APPS**

Radio Application Mode can be activated from the main menu (MENU button) by turning and pushing the Rotary Pad.

The following information appears on the display:

- "My Car": lets you see a series of information linked to the vehicle status.
- "Efficient Drive": lets you see some driving style parameters.
- "User’s Manual": lets you view and read the vehicle’s user manual.
- "Compass": press the icon to view the direction of the vehicle.

**Apple CarPlay And Android Auto — If Equipped**

The Apple CarPlay and Android Auto applications allow you to use your smartphone in the vehicle safely and intuitively.

To enable them, just connect a compatible smartphone via the USB port and the contents of the phone will be automatically shown on the Information and Entertainment System display.

To check the compatibility of your smartphone, refer to the indications on the websites:

If the smartphone is connected correctly to the car using the USB port, the Apple CarPlay or Android Auto icon will be displayed in the main menu.

**NOTE:**
Interaction with the smartphone may be needed to enable Apple CarPlay/Android Auto and some other functions. Complete the action on your device (smartphone) as needed.

**Apple CarPlay App Setup**

Apple CarPlay is compatible with the iPhone 5 or more recent models, with the iOS 7.1 operating system or later versions.

Before using Apple CarPlay, enable Siri from the settings on your smartphone.

To use Apple CarPlay, the smartphone must be connected to the car with a USB cable.

**Android Auto App Setup**

Before use, download the Android Auto application to your smartphone from Google Play Store.

The application is compatible with Android 5.0 (Lollipop) and later versions.

To use Android Auto, the smartphone must be connected to the car with a USB cable.
Interaction
After the setup procedure on connecting your smartphone to the car’s USB port, the application will automatically run on the Information and Entertainment System.

The Rotary Pad can be used to select and confirm the available smartphone functions.

You can interact with the Apple CarPlay and Android Auto voice assistants using the control on the steering wheel (long push of the button to start the interaction and short push to close the voice assistant).

The Telephone application of the smartphone can be accessed directly using the control on the steering wheel .

Multimedia contents on the smartphone can be accessed directly through “MEDIA” mode of the Information and Entertainment System.

Navigation
With the Apple CarPlay and Android Auto applications, the user can choose to use the navigation system on their smartphone.

Exiting From The Apple CarPlay And Android Auto Apps
To end the Apple CarPlay or Android Auto session, physically disconnect the smartphone from the USB port.

VOICE COMMANDS
NOTE:
Voice commands are not available for languages not supported by the system.

To use the voice commands, press the button on the steering wheel and say one of the commands below for the function you want to activate.

The available voice commands are listed below:

Radio Functions
The button can be used to activate the following functions:

- Tune To Station Xxx
- Tune To Frequency Xxx
- Add To Favorites
- Show Available Stations
- Show Favorite Stations
- FM
- AM

Media Functions
The button can be used to activate the following functions:

- Show/Play Albums
- Show/Play Artist
- Show/Play Composer
- Show/Play Genre
- Show/Play Playlist
- Play Song
- Play All
- View All Albums
- View All Artists
- View All Composers
- View All Genres
- View All Playlists
- View All Songs
- Enable/Disable Shuffle
- Go To AUX
- Go To USB 1
- Go To USB 2
- Go To Bluetooth
Phone Functions

The button can be used to activate the following functions:
- Telephone
- Phone Commands
- Dial <XXX>
- Call <XXX>
- Show Contacts
- Show Missed Calls
- Show All Calls
- Redial
- Search <XXX>

Navigation Functions — If Equipped

The button can be used to activate the following functions:
- Navigation
- Navigation Controls
- Preferred (previously set address)
- Navigate Home
- Set 2D Map
- Set Detailed 3D Maps
- Set Top View
- Start/Stop Route Guidance
- Repeat Instructions
- Show Map
- Find Nearest <Point Of Interest>
**CUSTOMER ASSISTANCE**

**IF YOU NEED ASSISTANCE**

The manufacturer and its authorized dealers are vitally interested in your satisfaction. We want you to be happy with our products and services.

Warranty service must be done by an authorized dealer. We strongly recommend that you take the vehicle to an authorized dealer. They know your vehicle the best, and are most concerned that you get prompt and high quality service. The manufacturer's authorized dealer have the facilities, factory-trained technicians, special tools, and the latest information to ensure the vehicle is fixed correctly and in a timely manner.

This is why you should always talk to an authorized dealer service manager first. Most matters can be resolved with this process.

- If for some reason you are still not satisfied, talk to the general manager or owner of the authorized dealer. They want to know if you need assistance.
- If an authorized dealer is unable to resolve the concern, you may contact the manufacturer's customer center.

Any communication to the manufacturer's customer center should include the following information:

- Owner's name and address
- Owner's telephone number (home, mobile, and office)
- Authorized dealer name
- Vehicle Identification Number (VIN)
- Vehicle delivery date and mileage

**Alfa Romeo Customer Center**

P.O. Box 21–8004
Auburn Hills, MI 48321–8004
Phone: 1-844-Alfa-USA (1-844-253-2872)

**Alfa Romeo Customer Care (Canada)**

P.O. Box 1621
Windsor, Ontario N9A 4H6
Phone: 1-877-230-0563 (English) Phone: 1-877-515-9112 (French)

**Customer Assistance For The Hearing Or Speech Impaired (TDD/TTY)**

To assist customers who have hearing difficulties, the manufacturer has installed special TDD (Telecommunication Devices for the Deaf) equipment at its customer center. Any hearing or speech impaired customer, who has access to a TDD or a conventional teletypewriter (TTY) in the United States, can communicate with the manufacturer by dialing 1-800-380-2479.

Canadian residents with hearing difficulties that require assistance can use the special needs relay service offered by Bell Canada. For TTY teletypewriter users, dial 711 and for Voice callers, dial 1-800-855-0511 to connect with a Bell Relay Service operator.

**Service Contract**

You may have purchased a service contract for a vehicle to help protect you from the high cost of unexpected repairs after the manufacturer's New Vehicle Limited Warranty expires. The manufacturer stands behind only the manufacturer's service contracts. If you purchased a manufacturer's service contract, you will receive Plan Provisions and an Owner Identification Card in the mail within three weeks of the vehicle delivery date. If you have any questions about the service contract, call the manufacturer's Service Contract National Customer Hotline at 1-800-521-9922 (Canadian residents, call (877) 230-0563 English / (877) 515-9112 French).

The manufacturer will not stand behind any service contract that is not the manufacturer's service contract. It is not responsible for any service contract other than the manufacturer's service contract. If you purchased a service contract that is not a manufacturer's service contract, and you require service after the manufacturer's New Vehicle Limited Warranty expires, please refer to the
contract documents, and contact the person listed in those documents.

We appreciate that you have made a major investment when you purchased the vehicle. An authorized dealer has also made a major investment in facilities, tools, and training to assure that you are absolutely delighted with the ownership experience. You will be pleased with their sincere efforts to resolve any warranty issues or related concerns.

WARRANTY INFORMATION

See the Warranty Information Booklet, for the terms and provisions of FCA US LLC and FCA Canada Inc. warranties applicable to this vehicle and market.

REPORTING SAFETY DEFECTS

In The 50 United States And Washington, D.C.

If you believe that your vehicle has a defect that could cause a crash or cause injury or death, you should immediately inform the National Highway Traffic Safety Administration (NHTSA) in addition to notifying FCA US LLC.

If NHTSA receives similar complaints, it may open an investigation, and if it finds that a safety defect exists in a group of vehicles, it may order a recall and remedy campaign. However, NHTSA cannot become involved in individual problems between you, your authorized dealer or FCA US LLC.

To contact NHTSA, you may call the Vehicle Safety Hotline toll free at 1-888-327-4236 (TTY: 1-800-424-9153); or go to http://www.safercar.gov; or write to:

Administrator, NHTSA, 1200 New Jersey Avenue, SE., West Building, Washington, D.C. 20590. You can also obtain other information about motor vehicle safety from http://www.safercar.gov.

In Canada

If you believe that your vehicle has a safety defect, you should contact the Customer Service Department immediately. Canadian customers who wish to report a safety defect to the Canadian government should contact Transport Canada, Motor Vehicle Defect Investigations and Recalls at 1-800-333-0510 or go to http://www.tc.gc.ca/roadsafety/.

PUBLICATION ORDER FORMS

☐ Replacement English User Guide kits may be purchased by visiting www.techauthority.com or by calling 1-800-890-4038 (U.S.) or 1-800-387-1143 (Canada). Visa, Master Card, American Express and Discover orders are accepted.

WARNING!

Engine exhaust (internal combustion engines only), some of its constituents, and certain vehicle components contain, or emit, chemicals known to the State of California to cause cancer and birth defects, or other reproductive harm. In addition, certain fluids contained in vehicles and certain products of component wear contain, or emit, chemicals known to the State of California to cause cancer and birth defects, or other reproductive harm.

The driver’s primary responsibility is the safe operation of the vehicle. Driving while distracted can result in loss of vehicle control, resulting in an accident and personal injury. FCA US LLC strongly recommends that the driver use extreme caution when using any device or feature that may take their attention off the road. Use of any electrical devices, such as cellular telephones, computers, portable radios, vehicle navigation or other devices, by the driver while the vehicle is moving is dangerous and could lead to a serious accident. Texting while driving is also dangerous and should never be done while the vehicle is moving. If you find yourself unable to devote your full attention to vehicle operation, pull off the road to a safe location and stop your vehicle. Some states or provinces prohibit the use of cellular telephones or texting while driving. It is always the driver’s responsibility to comply with all local laws.

This guide has been prepared to help you get quickly acquainted with your new Alfa Romeo and to provide a convenient reference source for common questions. However, it is not a substitute for your Owner’s Manual.

For complete operational instructions, maintenance procedures and important safety messages, please consult your Owner’s Manual, Information and Entertainment System Manual found on the website on the back cover of this document and other Warning Labels in your vehicle.

Not all features shown in this guide may apply to your vehicle. For additional information on accessories to help personalize your vehicle, visit www.alfaromeousa.com (U.S.); www.alfaromeo.ca (Canada) or your local Alfa Romeo dealer.

**DRIVING AND ALCOHOL**

Drunk driving is one of the most frequent causes of accidents. Your driving ability can be seriously impaired with blood alcohol levels far below the legal minimum. If you are drinking, don’t drive. Ride with a designated non-drinking driver, call a cab, a friend or use public transportation.

**WARNING!**

Driving after drinking can lead to an accident. Your perceptions are less sharp, your reflexes are slower and your judgment is impaired when you have been drinking. Never drink and then drive.
Get warranty and other information online – you can review and print or download a copy of documents for your vehicle provided by FCA US LLC by visiting these links. For the Owner’s Manual and the Information and Entertainment System Manual, visit www.alfaromeousa.com/owners/owners-service-manual (U.S.) or www.alfaromeo.ca (Canada), and for the Limited Warranties, visit www.alfaromeousa.com/owners/warranty (U.S.) or www.alfaromeo.ca (Canada). Click on the applicable link and follow the instructions to select the applicable year, make and model for your vehicle.

Whether it is providing information about specific product features, taking a tour through your vehicle’s heritage, knowing what steps to take following an accident or scheduling your next appointment, we know you will find the app an important extension of your Alfa Romeo vehicle. Simply download the app, select your make and model and enjoy the ride. To get this app, go directly to the App Store® or Google Play® Store and enter the search keyword “Alfa Romeo” (U.S. market only).
